APPLE IITM PERSONAL COMPUTER

RESOURCE DIRECTORY

A "WHERE TO FIND IT" BOOK OF APPLE ACCESSORIES,
BOARDS, PERIPHERALS, SUPPLIES & MORE!

INTRODUCTION

The APPLE II home computer is a most unusual product. It has been designed so that you, the owner, can transform it into an infinite variety of personalities to suit your requirements and tastes. Unlike most one-function consumer products, the APPLE II was designed with a modular concept, in which expansion and innovation is encouraged. Eight slots in the motherboard, a game port, and excellent documentation allow the designer or hobbyist to interface the APPLE with dozens of other devices, or to expand its capability. For those who would rather not design, dozens of manufacturers have products in this directory that will enhance or expand your APPLE computer.

This book is written in an attempt to present you with a look at a wide spectrum of products for the APPLE, making your APPLE more useful, more versatile, and more valuable. Welcome to the outside world of the APPLE!

A FEW NOTES OF EXPLANATION

1. **This is not a catalog.** It is a directory of accessories and products for the APPLE II computer, and the contents are for information only.
2. We do not endorse or evaluate the items included in this directory. Omissions are unintentional, and information on new items are welcome. Directory listings are provided at no charge.
3. We recommend that you visit your local dealer or write the manufacturer for further information before purchasing items in this directory. You can then be assured of up-to-date pricing and information. When writing manufacturers, please mention that you saw them in the **Apple Resource Directory**.
4. The information, listings, and prices contained in this directory are believed to be correct at the time of publication, however, WIDL Video assumes no liability whatsoever arising from the use of this information.
5. This directory is written and printed by WIDL Video and is in no way connected with the Apple Computer Company. APPLE II is a trademark of the Apple Computer Company, California.

If you are considering the purchase of a personal computer and have not as yet made your choice, we recommend the APPLE II very highly over every other mini computer currently on the market. The features, quality, and overall value of the APPLE are, in our opinion, outstanding. It has the ability to grow and expand as your needs change because its excellent design was built around modular concepts. The standard APPLE contains eight built-in connectors that allow you to add a variety of languages, printers, floppy disk drives, modems for telephone communication, and many more.

If you are undecided, we feel that the APPLE is an excellent choice. See your local APPLE dealer today for a full demonstration. Feel free to contact us if you have further questions. We will attempt to answer them as best we can without selling you anything, as we do not sell the APPLE. We only believe in the product.

TABLE OF CONTENTS

BOARDS	5
<p>Under the lid of your APPLE, you will find eight slots or ports which open the APPLE to a myriad of Plug-in Boards. These boards, provided by The Apple Computer Company, independent companies, or home-built by the hobbyist, interconnect the APPLE to the outside world. Boards can interface with Modems, Printers, Speech Devices, or Sensors — and the list grows each day.</p> <p>Unlike most computers, APPLE has encouraged and cooperated with board designers so that you, the user, can benefit from the many creative people outside the factory. Even a blank hobby prototype board is available for the stout of heart.</p>	
MUSIC	24
<p>Beethoven would have been proud to see what musical accomplishments the APPLE has made through the addition of synthesized music hardware.</p>	
PERIPHERALS	28
<p>Generally, these are the stand-alone devices that enhance the APPLE, plugging into the game port, a slot, or occupying a ROM socket.</p>	
ACCESSORIES	40
<p>These are the things that help your APPLE stay happy and operational. For the APPLE that has everything!</p>	
STORAGE	44
<p>As the APPLE becomes more and more useful, owners are seeking increased data storage capability, faster access speed, and security. We are beginning to see a trend toward larger disk drives, hard disk, and even cartridge.</p>	
RESOURCES AND SUPPLIES	48
<p>A few leads on where to find assistance and day-to-day supplies.</p>	
BOOKS	49
MAGAZINES AND PUBLICATIONS	53
SPECIAL APPLES	57
TIME SHARING SYSTEMS	61
<p>Reach out and contact the outside world using a telephone line and a Modem. Your APPLE becomes a terminal that can access other computer systems.</p>	
USER GROUPS	63
<p>Here are people that share your interest in the APPLE. These groups offer assistance, program libraries, meetings, newsletters, and a bit of encouragement.</p>	
SOFTWARE PRODUCERS AND SOURCES	67
<p>An up-to-date listing of the folks who write and sell programs for the APPLE.</p>	
AUTHORIZED APPLE DEALERS	81
<p>These are the fine people who you should first contact for all your APPLE needs. They can help you choose the items that will best suit your requirements.</p>	

AI-02 ANALOG INPUT SYSTEM FOR APPLE II

The AI-02 Analog Input Card provides a single card data acquisition system for Apple II computers. Sixteen analog channels may be monitored by the system with 8-bit resolution. Channels are individually addressable and conversion time is 70 microseconds. The system can be operated easily from BASIC, and also provides interrupt capability for more efficient software implementation. The AI-02 is suited to a wide variety of applications including temperature sensing and process control. The AI-02 is the first member of the Applocation (tm) family of accessories for the Apple II. Literature on this product line is available from the manufacturer.

INTERACTIVE STRUCTURES, INC.
 Post Office Box 404
 Bala Cynwyd, Pennsylvania 19004

AI-02 Analog Input System 16-Channel	\$260.00
AI-02-LS Light Level Sensor	20.00
AI-02-TS Temperature Sensor	20.00
AI-02-VS Voice Sensor	25.00
AI-02-KS Control Knob	20.00
AI-02-SC Signal Conditioner Card	165.00

AOO3 ANALOG OUTPUT SYSTEM FOR APPLE II

The AOO3 is a latched analog output card for Apple II available in 2-, 4-, and 8-channel configurations. A program written in any language can set the output of a channel with a single operation. The AOO3 accepts an 8-bit quantity (0 to 255) and produces either a 0 to 10 volt output (standard) or a -5 to +5 volt range (jumper selectable). The AOO3 is suited to a wide variety of applications from computer generation of musical tones to control of light or temperature in an industrial process. The AOO3, together with the AIO2 analog input system, announced earlier this year, represent a complete control and measurement facility for the Apple II, ideal for home sensing and control, laboratory experiment control, or industrial process control.

INTERACTIVE STRUCTURES, INC.
 Post Office Box 404
 Bala Cynwyd, Pennsylvania 19004

AOO3-2 Analog Output System 2-Channel	\$170.00
AOO3-4 Analog Output System 4-Channel	240.00
AOO3-8 Analog Output System 8-Channel	380.00

THE APPLE CLOCK

Until now there hasn't been a Real-Time Clock for the Apple. The Apple Clock from Mountain Hardware keeps time and date in 1mS increments for over one year. On-board battery back-up keeps the clock running in the event of power outage. Software controlled interrupts are generated by the clock. That means you can call up schedules, time events, date printouts . . . all in real time on a programmed schedule.

The Apple Clock is easily accessed from BASIC using routines carried in on-board ROM. With it you can read time and program time-dependent functions for virtually any interval. From milliseconds to days, months, or a year.

Plug the Apple Clock into a peripheral slot on your Apple and you're ready to go.

FEATURES:

- Time and date in 1mS increments for periods as long as one year.
- Software for calendar and clock routines, as well as an event timer are contained on on-board ROM.
- Program interrupts.
- Crystal controlled accuracy of plus or minus .001%.
- On-board battery back-up keeps your clock in operation even during power outage.

With Parts Part No. 210A \$119.95

COMMUNICATIONS INTERFACE CARD

The Communications Interface Card extends the usefulness of your APPLE II by allowing it to "talk" (through a modem) with other computers and terminals over ordinary telephone lines. What's more, the card lets your system tap the immense resources of timesharing services and the telephone network itself. Now you can load programs over the phone lines; send messages to remote terminals through a timesharing network; or access your office computer from the comfort of your home. And best of all, because this card is intelligent, you can do all these things, quickly and easily, in BASIC. There are no control programs to write or load. Built-in firmware lets the card handle the complete job of serial communications, so you can concentrate on the job you want to do.

- Permits Interactive Programming and Distributed Computing using Two or More APPLE II's
- Quickly Transfers Letters, Programs, or other Information over the Phone Lines Through Standard Modems or Acoustic Couplers
- Allows the APPLE to Become a Terminal for other Computer Systems
- Includes all Necessary Programs — No Software to Write
- Easily Controlled from BASIC using Simple Commands
- Fully Assembled and Tested — No Wiring or Soldering
- Communicated at 110 or 300 Baud, Half- or Full-Duplex
- Provides an RS-232C Serial Interface, with Industry Standard DB-25 Connector
- Works with Bell Telephone Hardware — or Similar Equipment from other Manufacturers
- Plugs into any APPLE II Expansion Slot for Fast Installation
- Uses the APPLE II Power Supply, for Economy and Convenience

The Communication Interface Card allows your APPLE II to exchange data with a remote computer as easily as it talks to its own keyboard and display, using standard BASIC commands. The details of this communication are completely controlled by firmware built into the card, to eliminate the need for user programming.

A simple BASIC command (such as PR#2) initializes the Communications Card to transmit any information that appears on the screen. A second command allows the APPLE II to receive data through the card. Another command allows the system to be controlled by data coming in through the card (instead of by commands from its own keyboard). A fourth transforms your computer into a "dumb terminal," moving data in and out but not operating on it.

There are commands to change the data transfer speed from 300 baud (normal) to 110; to set full- or half-duplex transmission mode; and to provide special handling of lower-case characters.

The Communications Interface Card can be used to adapt a variety of serial equipment (devices that exchange data one bit at a time) to your APPLE II. Hardware that is compatible with this interface includes modems (telephone line adapters) and other equipment that can:

Transfer serial data at 110 or 300 baud;

Connect to an RS-232C interface (which defines the voltage levels of the data signals)

Complete operating information, logic diagrams, and firmware listings are supplies in the Communications Interface Card Manual.

PARAMETER

DESCRIPTION

Signal Level:	EIA RS-232C
Data Word Format:	1 start bit, 1 or 2 stop bits, 7 or 8 data bits; odd, even or no parity
Lower Case Characters:	Can be optionally converted to upper-case, or can be passed through unmodified.
Consumption:	5V at 150mA (max.)
Firmware:	256-byte PROM, included on the card
Card Size:	4.5 by 2.75 inches (not including connector finger); fits entirely inside the APPLE II case
External Connector:	DB-25 female connector with mounting bracket

Order Number: A2B0003. Supplied with:

- Communication Interface Card
- Firmware in ROM
- Connector and Mounting Bracket
- Manual
- Demonstration Tape

APPLESOFT II FLOATING-POINT BASIC LANGUAGE

Applesoft II is an expanded version of Microsoft's popular floating-point BASIC. Its 9-digit arithmetic and large function library make it ideal for business and scientific programs. New features like high-resolution graphics routines, cassette data STORE/RECALL, and user-programmable error messages make the language both powerful and easy to use. Capabilities include:

- 3 Data Types — Real, Integer, and String
- Data Display in either Fixed-Point or Scientific Notation
- N-Dimensional Arrays and N-Letter Variable Names (first two letters significant)
- Extensive Mathematical, Logical and Scientific Capabilities
 - EXP, LN, SQ.RT., SIN, COS, TAN, ARCTAN
 - And, OR, NOT, ABS, INT, RANDOM, SIGN
- String Operations to Aid the Business Programmer:
 - Compare: =, <, >, =, =,
 - Concatenate: +
 - Variable Type Conversion: ASC, STR, VAL
 - Substring Separation: LEFT, RIGHT, MID, LEN
- Graphics Statements that Simplify Display Programming:
 - Print Format Control: NORMAL, INVERSE, FLASH
 - Graphics Control: COLOR, PLOT, POSN, LINE, DRAW, SCRIN, GRAPHICS, TEXT, HIRES, ROT, SCALE, SHAPELOAD
- General Operations that Include and Extend Upon Dartmouth BASIC:
 - Program Manipulation: CLEAR, NEW LIST, RUN, CONT, LOAD, SAVE
 - Variable and Function Definition: DATA, DEF. FUNCT. DIM
 - Data Handling and Storage: READ, RESTORE, STORE, RECALL
 - Loops and Branching: FOR...NEXT, IF...GOTO, IF...THEN, ON...GOTO, ON...GOSUB, ONERRGOTO, RESUME, GOTO, GOSUB, RETURN
 - Input/Output and Format Control: INPUT, PRINT, IN#, PR#, VTAB, TAB, HOME, PADDLE
 - Machine Level Statements: PEEK, POKE, CALL, POP, LOMEM, HIMEM

Applesoft II is supplied as a cassette tape or a plug-in ROM card. The tape version runs in systems with 16K or more of RAM (24K or more for high-resolution graphics). The ROM version will run in 4K or more of RAM, but requires 16K RAM if high-resolution graphics are used. A comprehensive reference manual is included.

(Order Numbers: A2B0009 — card, A2T0004 — tape)

(408) 996-1010

Z-80 SOFTCARD

A plug-in processor for the Apple II, allows the Apple to run software written for Z-80 based computers. SoftCard includes the CP/M operating system from Digital Research and Microsoft Disk Basic. The user may use either the Apple's 6502 processor as needed to run a program. A command switches between the processors. SoftCard is compatible with existing Apple software and peripherals, according to Microsoft.

Versions of Microsoft's Fortran, Cobol and Basic Compiler for the Apple II with Z-80 SoftCard will be available separately. CP/M applications software written for Z-80 based computers can be converted to run on the Apple with minimal alteration, the supplier claimed.

Among the features that Version 5.0 of Microsoft Basic adds to Applesoft are: PRINT USING for formatted output; long variable names; random disk I/O with variable length records; WHILE/WEND conditional statement; 16-digit precision; and AUTO and RENUM for numbering and renumbering lines. Graphics capabilities are expanded with the graphics statements LINE, PUT and GET.

The Z-80 SoftCard will run on all configurations of the Apple from the standard Apple II to the Apple II Plus with Language Card. No hardware or software modifications are required. It plugs into any of the Apple's slots except slot 0 and does not affect operation of the Apple II when not in Z-80 mode. The Z-80 processor runs at an effective clock rate of 2 Mhz.

SoftCard will run on systems with 48K RAM and single disk drive.

INTERFACE BOARD

A newly announced peripheral interface board contains two 2716 PROMs, 20m-A and RS232 interfaces, a real-time clock, and a parallel output port. The board also has two 16-pin DIP sockets, which may be used to connect the board to an external source. Contact the manufacturer for pricing information on the complete board—without components, but with assembly instructions, diagrams, and programs.

DS-65 DIGISECTOR

The Micro Works DS-65 Digisector is the first random access video digitizer produced for the Apple II. It converts a TV camera's output into digital information that your computer can process. Since operation is straightforward, you don't have to be a software wizard to utilize the DS-65's extensive capabilities. The DS-65 features:

- High Resolution: 256 x 256 picture element scan
- Precision: 64 levels of grey scale
- Versatility: accepts either interlaced (NTSC) or industrial video input
- Economy: a professional tool priced for the hobbyist

This intelligent Apple peripheral has on-board software in 2708 EPROM, featuring:

- Full screen scans directly to Apple Hi-Res screen
- Easy random-access digitizing by Basic programs
- Line-scan digitizing for reading charts or tracking objects
- Utility functions for clearing and copying the Hi-Res screen

The DS-65 Owner's Manual has step-by-step instructions for setup and use, with a complete schematic and explanation of how it functions. Also included is a complete source listing of the on-board software. Basic programs provided include a smart burglar alarm and a graph reader.

Operation is simple; the computer sends the Digisector two eight bit addresses (X and Y coordinates), and the Digisector returns the digitized brightness of the image at the specified location. For setup and monitoring purposes, the Digisector produces an output comprised of the camera's video signal plus a superimposed cursor, showing exactly where the DS-65 is looking.

You can use the DS-65 for digitizing pictures for display by programs; security systems; moving target indicators; computer portraiture; fast to slow scan conversion for ham operators; reading paper tape, strip charts, bar codes . . . just about anything!

The DS-65 Digisector comes fully assembled, tested and burned in. An inexpensive TV camera and the DS-65 are all you'll need to let your Apple see the world!

Advanced Video FSII Camera Price: \$299.00
COMBINATION PRICE: \$599.00

PARALLEL PRINTER INTERFACE CARD

The Parallel Printer Interface Card opens up a whole range of printing applications for your APPLE II. With this card (and almost any popular printer), you can produce the reports, diagrams, labels and listings your application requires. And, because this interface is intelligent, it's easy to use—no complex control programs for you to write or load. The card's built-in brainpower does the work for you; while you concentrate on the job you want to do.

We designed this card to handle the **whole** task of printer control; so that your programs can use all the capabilities built into your printer. Expanded headlines, lower-case text, graphics—if the printer can do it, you can now program it simply and quickly, in BASIC. By building in the firmware that makes this card intelligent, we set a new performance standard for personal computer interfaces.

- No Programming Needed — All Required Software in On-Board ROM
- Allows Printing Through Simple BASIC Commands
- Allows Up to 255 Char/Line — Upper and Lower Case, Special Symbols, etc.
- Handles Printers Up to 500 Char/Sec (3700 LPM at 80 Char/Line)
- Fully Assembled — Not a Kit
- Interfaces to Most Popular Printers (Axiom, Centronics, SWTP, etc.) Through an 8-bit Parallel Port
- Easy Installation — Simply Plugs into a Connector in the APPLE II

The intelligent Printer Interface Card allows your BASIC program to produce hard-copy output as easily as it " prints" on the TV monitor screen. Command interpretation and printer control details are handled by the firmware built into the card, to eliminate user programming requirements.

A simple BASIC command, such as PR#1, initializes the Printer Card. Subsequent PRINT statements will send data to the printer as well as the TV monitor at 40 characters/line. (The card does not normally have to be initialized again unless the APPLE II is turned OFF or RESET.)

A second command disables the TV monitor and sets the printer line width between 0 and 255 characters/line. Another command returns output to both the TV and printer, at 40 characters/line.

For special applications, there are commands to change the printer control character, and to disable the automatic printer card line feed (to allow use with printers that generate their own line feeds).

And finally, the command PR#0 turns the printer card OFF entirely.

The Parallel Printer Interface Card has been tested with Axiom, Centronics, Printronix, and SWTP printers. However, it is designed to work with almost any printer that can:

- Take in data through a 7- or 8-bit parallel port;
- Accept data when a STROBE signal (supplied by the APPLE II) tells the printer that the data is ready; and
- Return an ACKNOWLEDGE signal to the Printer Interface Card when it has taken the data in for printing.

Complete information on adapting the Printer Interface Card to various printers is supplied in the Parallel Printer Interface Card Manual.

PARAMETER

DESCRIPTION

Data and Control Outputs:	Bits 0-7 and STROBE (Positive-going or negative-going acceptable)
HIGH-LEVEL OUTPUT:	2.7V (min. 0.4mA (max.
LOW-LEVEL OUTPUT:	0.5V (max.), 8.0mA (max.)
Control Input:	ACKNOWLEDGE (Positive-going or negative-going acceptable)
HIGH-LEVEL INPUT:	2.0V (min.), 20uA (max.)
LOW-LEVEL INPUT:	0.8V (max.), -0.4mA (max.)
Power Consumption:	5.0V at 150mA (max.)
Firmware Storage:	6309 (256x8) PROM, on card
Printer Control Characteristics	
LINE WIDTH:	Up to 255 characters/line
OUTPUT SPEED:	Up to 5000 characters/second, controlled by the printer
Card Size:	4.5" x 2.75" (not including connector fingers); fits inside the APPLE II
Printer Connection:	By means of 20-wire ribbon cable, included (user must supply connector on printer side of cable.)

Order Number: A2B0002. Supplied with:

- Parallel Printer Interface Card
- Firmware in ROM
- Configuration Jumper Block
- Ribbon Cable
- Manual

A10 SERIAL AND PARALLEL APPLE INTERFACE

TWO BOARDS IN ONE

The A10 Apple Interface allows maximum flexibility for interfacing your Apple II with peripherals such as printers, plotters, terminals, modems and other computers. The A10 can communicate with both serial and parallel devices. It can even interface with both at the same time. And you won't need to write any software to operate the A10. It comes complete with the necessary software and on-board firmware to handle serial and parallel communications.

Today you may need just a serial interface or a parallel interface. But what about tomorrow? Why limit yourself when you can get two boards in one with SSM's A10 Serial and Parallel Apple Interface.

FEATURES

- One RS-232 serial interface with:
 - Three handshaking lines (RTS, CTS, DCD)
 - Nine standard baud rates from 110 to 19,200 baud including 134.5 baud for selectrics.
 - Additional baud rates possible through external input.
 - Baud rates rotary switch selectable—no jumpers required.
 - Modes of serial communication software controlled.
- Two bi-directional 8-bit parallel ports with:
 - Four additional interrupt and handshaking lines.
 - Interface configuration software controlled.
- Includes on-board firmware for controlling serial interface and software for driving parallel printers. Firmware for parallel interface control available as an option.
- Cable assemblies for serial and parallel interfaces included.
- Comprehensive users manual with easy to follow application notes for interfacing to most popular printers and terminals.
- Plugs into any Apple II expansion slot.
- Available assembled and tested or in kit form.
- Warranty: Assembled—one year, Kit—90 days.

SERIAL INTERFACE

The A10's serial interface uses the RS-232 standard to assure maximum compatibility with a variety of serial devices. For example, with the A10 you can connect your Apple to a serial printer for hard copy of programs or other information. The A10 can also interface with a serial CRT terminal to expand the Apple's video display beyond 40 characters per line. By interfacing with a modem you can utilize time sharing services or communicate with a remote computer over telephone lines.

On-board firmware provides the capability to:

- Generate automatic line feed
- Turn off the Apple's video display
- Vary line length
- Generate a delay on carriage return
- Operate the board from any Apple II expansion slot

PARALLEL INTERFACE

With A10's parallel interface you can connect your Apple to a variety of parallel printers. There are enough lines to handle two printers simultaneously with handshaking control. The users manual includes a software listing for controlling parallel printers or, if you prefer, a parallel driver routine is available in firmware as an added option.

The parallel interface can also be used as a general purpose interface for a variety of control applications such as security systems, environmental control or automated sprinklers. Your imagination is the only limitation.

SPECIFICATIONS

Serial Interface

- One RC-232 interface with EIA receivers and drivers
- Available handshaking lines—Request-To-Send (RTS), Clear-To-Send (CTS), Data-Carrier-Detect (DCD)
- Rotary switch selectable baud rates—110, 134.5, 300, 600, 1200, 2400, 4800 (9600 and 19200 baud available under software control for printers)
- External clock input for up to 500K baud
- Software controlled modes:
 - 7 or 8 data bits
 - Even or odd parity
 - 1 or 2 stop bits
 - ÷ 1, ÷ 16, ÷ 24 baud rate divisor
 - Master reset
 - RTS mode control
- Double buffered send and receive registers
- Supports full duplex operation

Parallel Interface

- Two bidirectional 8-bit ports
- Four additional interrupt and handshaking lines
- Interface configuration and data direction controlled by software

Firmware

- 256 bytes of on-board PROM

Addressing

- 6 memory mapped registers

Cable Assemblies

- Serial interface—6 inch ribbon cable with DB-25 socket
- Parallel interface—18 inch ribbon cable with uncommitted end

PC Board

- High grade FR-4 blue epoxy

- Double sided solder mask with silk screened parts legend and gold-plated edge connector contacts
- Dimensions—2.7" x 6.3" (excluding edge connector contracts)

Miscellaneous

- PROMs and data buffer power-down when not addressed
- Sockets provided for all ICs

HOBBY/PROTOTYPING CARD

The Hobby/Prototyping Card provides the user with a means of building up experimental circuitry for the Apple computer. This 2¾" x 7", double-sided circuit board includes a hole pattern (on 100-mil centers) that accepts all conventional integrated circuits and passive components. The card plugs directly into one of eight sockets on the Apple circuit board, and fits entirely within the APPLE II case. Documentation includes a complete system bus description to aid the interface designer.

(Order No. A2B0001)

DOUBLEVISION 80 COLUMN BOARD

Eighty columns x 24 lines video display with upper and lower case. Works with Apple II, Apple II Plus and PASCAL. Full 96 ASCII character set. Fully programmable cursor: 1-9 lines any position, blinking (2 speeds) and non-blinking. All software included for BASIC (optional for PASCAL). Compatible with the latest in word processing software "Apple-Pie 2.0." Shift lock feature. Built in light pen capability. Inverse video. Full cursor control. 50/60 Hz operation. No conflict with other boards.

THE COMPUTER STOP
 16919 Hawthorne Boulevard
 Lawndale, California 90260
 (213) 371-4010

\$295.00
PASCAL software interface additional \$25.00

APPLE II I/O BOARD KIT

Plugs into Slot of Mother Board • One 8 Bit Parallel Output Port (Expands to Three Ports) • One Input Port • 15mA Output Current Sink or Source • Can Be Used for Peripheral Equipment Such as Printers, Floppy Discs, Cassettes, Paper Tapes, etc. • One Free Software Listing for SWTP PR40 or IBM Selectric.

ELECTRONICS WAREHOUSE INC.
 15820 Hawthorne Boulevard
 Lawndale, California 90260
 (213) 370-5551

1 Input and 1 Output Port \$49.00
1 Input and 3 Output Ports \$64.00

HIGH-SPEED SERIAL INTERFACE CARD

The High-Speed Serial Interface Card allows APPLE II to exchange data with computers, printers and other fast devices in serial format (one bit at a time). In the printer mode, it can produce charts, reports and labels on most popular printers. As a communications controller, it is ideal for situations in which large programs or blocks of data must be transferred. It is intended for use (in place of the Communications Interface Card) in applications that:

- Involve serial printers or terminals;
- Use data rates other than 110 or 300 baud (10 or 30 char/sec); or
- Require movement of large data blocks (256 or more bytes) without interruption

The Serial Card features on-board firmware that provides BASIC control in both block-data-transfer and printer-operation modes. A number of hardware and software switches on the card serve to adapt it to a wide variety of applications, yet it remains simple to use because of its built-in intelligence.

- Permits BASIC Control of High-Speed Printers and Plotters
- Quickly Transfers Large Blocks of Data by Telephone (through a modem), or Directly to Local Equipment
- Allows the APPLE II to Communicate with High-Speed Terminals and Other Computers
- Includes Control Software in ROM — No Programs to Write
- Handles Half-Duplex Communication from 75-19.2K Baud
- Provides Switch-Selectable Preset Conditions for Speed, Line Length, Auto Line Feed and Carriage Return Delay
- Fully Assembled and Tested — No Wiring Required
- Provides an RS-232C or Current Loop Serial Interface, with Industry Standard DB-25 Connector
- Works with Bell Telephone Hardware, or Similar Equipment from Other Manufacturers
- Plugs into Any APPLE II Expansion Slot for Fast Installation
- Uses the APPLE II Power Supply for Economy and Convenience

The Serial Interface Card allows your APPLE II to exchange data with a remote computer or other high-speed device as easily as it talks to its own keyboard and display. You simply specify the area of memory whose contents are to be moved and the direction of movement (in or out). The rest of the job is handled by built-in firmware on the Serial Card.

A simple BASIC command (such as PR#1) initializes the Serial Card. A second command may then be used to specify any changes in speed, parity, etc., from the switch-selected preset conditions. Then, in the block transfer mode, a single statement will cause an entire data block to be transferred in or out of the APPLE II.

In the printer mode, information is automatically transmitted out through the card. Special provision is made for handling lower-case characters, carriage return delays, and printer line widths of up to 255 characters. BASIC listings are formatted.

The Serial Interface Card can adapt a variety of serial equipment to your APPLE II. Hardware that is compatible with this interface includes modems (telephone line adapters), printers, plotters, computers, and other equipment that can:

- Transfer Serial Data at 75-19, 200 Baud, Half-Duplex
- Connect to an RS-232C Interface (which defines voltage levels and the connector type)

Complete operating information, logic diagrams and firmware listings are supplies in the Serial Interface Card Manual.

PARAMETER	DESCRIPTION
Signal Level:	EIA RS-232C
Data Word Format:	1 start bit, 1 or 2 stop bits, 5-8 data bits; odd, even, or no parity; Checksum is optional
Character Handling Options:	Lower-case characters can be optionally converted to upper-case or can be passed through unmodified and displayed in inverse video on the monitor screen.
Firmware:	768 bytes of PROM, included on card
Card Size:	4.5 x 2.75 inches (not including connector fingers); fits entirely inside the APPLE II case
External Connector:	DB-25 female connector with mounting bracket

Order Number: A2B0005. Supplied with:

- High-Speed Serial Interface Card
- Firmware in ROM
- Connector and Mounting Bracket
- Manual

APPLE BUTLER

A new foreground/background system for home control called Apple Butler gives the Apple II the capability of running two programs concurrently; one for the monitor and control of systems in your home, and one for any other task you care to do.

The Butler provides up to 16 analog inputs for temperature, light, moisture, or any other input data. Up to 32 switch inputs are provided for security or fire sensors, push buttons, magnetic reed switches, or other on/off inputs or status indicators from controlled devices. Up to 32 output latches are available for control of output devices.

Several control modules will be available for the Apple Butler system. The first will be a solar heating control system to control a solar hot water heater, a solar assisted home heating system, a water-heating fireplace heating system, or a combination of the three. Other systems are planned for control of automatic swimming pool equipment, sprinkler systems, home or commercial greenhouses.

SUP'R'TERMINAL 80 COLUMN BOARD

SUP'R'TERMINAL is an 80 column by 24 line plug-in compatible board for the Apple II computer. Eighty columns by 24 lines, upper and lower case; all 128 ASCII characters. Upper and lower case entry using the Apple II keyboard. Includes an upper and lower case 5x8 dot matrix ASCII character set, and inverse alpha characters. Character set can be user definable. Includes VBCtm (video balance circuit) which enables the use of displaying 80 columns on an inexpensive 8 MHz CRT monitor. Shift lock feature. Works with APPLE PASCAL and APPLE BASIC. Incorporates PASCAL and BASIC control characters. ALL monitor-type escapes are valid. Follows protocols of PASCAL and BASIC operating systems. Compatible with ALL APPLE II peripherals. Effective baud rate greater than 10,000; fast scrolling and clearing. Synchronous operation with APPLE II. Can be used with APPLE II communication interface board to act as self contained terminal for time-sharing or other applications.

Post Office Box 61011
Sunnyvale, California 94088

FAST FLOATING POINT BOARD

The AMD9511 Fast Floating Point Processor Board increases the computation speed of the Apple II such that the calculation of 5000 sines requires only about 24 seconds rather than 133 seconds. The table below shows the speed increases for various math functions:

FUNCTION	AMD9511 BOARD	APPLESOFT II
X = SGN(I)	14 seconds	14 seconds
X = SQR(I)	15 seconds	250 seconds
X = SIN(I)	24 seconds	133 seconds
X = COS(I)	24 seconds	135 seconds
X = TAN(I)	27 seconds	246 seconds
X = ATN(I)	27 seconds	224 seconds
X = LOG(I)	25 seconds	114 seconds

VIDEOTERM is an 80 column by 24 line 7 x 9 matrix. Plug in compatible board for the APPLE II. Eighty columns by 24 lines, with easy to read 7 x 9 dot matrix, upper and lower case with descenders. 1K firmware that incorporates PASCAL and BASIC protocols, user isn't required to enter machine language programs or change PASCALS, MISC. INFO., or GOTOXY files. Upper and lower case data entry with shift lock, using the APPLE II keyboard. VIDEOTERM is the same size as the APPLE language card. Display control character mode, where any control characters embedded in character stream are displayed. Fully programmable cursor, 1-9 lines along with blinking at two rates or non-blinking. Font size is programmable in the range of 8 x 2 to 9 x 16 dots. Four standard display formats that are controlled by escape sequences. Compatible with all APPLE II peripherals. Fifty or 60 HZ operation. Power and input connector for light pen. Sockets for all integrated circuits. Crystal controlled dot clock for excellent character stability. Power consumption is held to a minimum through the use of CMOS and lower power devices. Limited graphics or character set can be user definable up to a maximum of 128 symbols of 8 x 16 dot matrix font. Eighth bit of ASCII code can be used to change any character to inverse display mode. Black on white or white on black video output.

APPLETIME™, A REAL TIME CLOCK

The Appletime (Model APT-1) is a single peripheral board which plugs directly into any I/O slot on the Apple II. Timing is done completely in hardware (i.e. NOT an interrupt driver clock). Thus, the Appletime continues to operate even when the computer is turned off. Our exclusive Three Way Power System keeps the clock running via its own AC supply, the computer's, or battery backup in case of power failure. Other features include 12/24 hour selection, AC or crystal timebase, 50/60 Hz, and BCD or ASCII data format. Fully assembled and tested, with instructions.

SPEECHLAB

- SpeechLab recognizes the spoken word using pattern matching techniques.
- Use it for data entry to replace keyboard input, quality assurance, control, games and speech research.

Speech entry is natural in any language. Speech is the most convenient communications channel for all of us. Two or three hours of training will make you an expert in voice computer entry.

Speech is a human's highest capacity output channel. You can use it in the dark, around corners and without contact. You can use it in conjunction with other data entry for high throughput.

You can use speech on the move. It's compatible with telephones and voice communication networks. Speech is unaffected by weightlessness. Use it in a clear room environment.

Use it anywhere lightweight, completely portable computer entry is required.

Typical applications for SpeechLab include voice control games, package sorting, inventory entry, air traffic control, data retrieval, data entry, cartography, computer aided troubleshooting, airline reservations, programming and speech recognition research.

Features include ROM based software with a relocatable program so you can load it anywhere you have memory. After loading, the 2K ROM can be disabled under computer control. The speech recognition program, callable from any BASIC, requires 4K bytes of user supplied RAM. This RAM can be located anywhere in the address space. 32 word vocabulary.

Hardware includes two band pass filters with two bits of amplitude, two zero crossing detectors and a linear amplifier.

A combined hardware/software manual includes ten experiments.

SpeechLab features functional signal processing modules that can be reconfigured under software control for maximum freedom. Filter skirt roll-off is 80 dB per decade. SpeechLab carries an on-board signal generator, for prompting and built-in test, previously found only in the most expensive equipment. Typical power consumption is 1 watt. For ease of use there is a single on-board input/output port.

Hardware includes three band pass filters (6 bits amplitude), one zero crossing detector, a linear amplifier, compression amplifier, six bit A/D converter and a beeper. The raw waveform is available for advanced experiments.

Even more important is the 275 page SpeechLab laboratory manual. Here is the only introductory volume on speech recognition currently available anywhere. The SpeechLab manual includes an introduction, a section on the mechanisms of speech and 35 graded experiments using programs written in SpeechBasic. There are over 100 tables and graphs. A description of the programs including source code is part of the package. A seven page bibliography will guide you in further study.

Manuals are available separately. They are excellent introductory texts on speech and pattern recognition.

Software for SpeechLab includes seven complete programs, three of which are offered in source and on paper tape and four in source alone. The three with paper tape and source are: SpeechBasic programming language; Assembly language speech recognition program; and hardware self test program. Source programs are provided in SpeechBasic to plot and correlate speech data. Two recognition programs are offered to clarify speech concepts.

The Assembly language program uses less than 4K bytes for a 32 word vocabulary. It loads at 100H. A high core version is available. The SpeechBasic BASIC interpreter loads at 0 and requires 8K of memory. A diagnostic program is included.

A new noise cancelling microphone is offered for the Model 20.

Prices do not include freight or postage. All orders prepaid or C.O.D. Prices subject to change without notice.

ROMPLUS +

ROMPLUS+ is a peripheral board whose added features can turn the Apple computer into the most powerful personal computer available today.

ROMPLUS+ provides six sockets to accept individually addressable 2K ROM's or EPROM's. Keyboard Filter™, a 2K ROM program, comes installed on the ROMPLUS+ board and adds many useful features to your Apple including:

- Upper and lower case letters. The only system that offers keyboard input and standard shift key operation.
- Multiple user-defined character sets.
- Colored or inverse-colored letters.
- Keyboard macros—two key-stroke, automatic typing of multiple, user-defined words phrases. Including BASIC and DOS commands.
- Mixed text and graphics.
- Improved cursor control.
- STOP LIST and END LIST.
- Works with Integer BASIC, RAM or ROM Applesoft, and DOS.
- And more . . . quick to learn. Easy to use.
- Software support provided on disk includes demonstration programs and two Editors that allow you to define your own characters or keyboard macros.

In addition to the Keyboard Filter ROM, ROMPLUS+ offers five sockets for ROM or EPROM, plus "scratch-pad" RAM. And, sophisticated firmware on ROMPLUS+ allows one, two, or more of its chips to be used simultaneously for programs longer than 2K.

Many software programs really ought to be utilized as firmware. ROMPLUS+ makes that an actuality for the Apple by providing six additional ROM sockets.

ROMPLUS + BOARD SPECIFICATIONS

- Holds 6—2716 volt EPROMs or ROM equivalent. Each holds 2048 bytes.
- Each ROM resides in the Apple \$C800 space any any ROM may be turned on and used when desired.
- An on-board control ROM residing in the CN00 space is activated with a PR#N or IN#N from BASIC. It controls the six ROMs and handles communication between ROMs, including subroutine calls from one ROM to another which allows use of programs larger than 2K.
- 255 bytes of on-board RAM for scratch pad or data storage. It resides at CF00-CFFE. This RAM space is software selectable between this RAM and the top of any ROM you may select.
- Two TTL inputs are available for special control. One may be used with Keyboard Filter for "Shift Key" operation.
- Driver software included to allow usage of other boards using the C800 space in conjunction.

KEYBOARD FILTER SPECIFICATIONS

- Upper and lower case characters plus special graphics and characters. One character set is contained on the ROM. Other FONTS may be designed using our FONT-Editor.
- Keyboard MACRO's allow one key to define a complete message. The Macro Editor allows easy definition.
- Text and Graphics may be contained anywhere on page. Two independent pages may be used.
- Characters may be in any of five colors.
- Special editing controls enhance Apple's capability. Clear current page, delete current line, copy to end of line, stop listings, plus easy cursor movements.
- Shift key operation, as well as shift lock.

For custom applications, ROMPLUS + is available without Keyboard Filter at \$149. Keyboard Filter is available as a retrofit for ROMPLUS + at \$50.

SUPERTALKER

SuperTalker allows you to add the dimension of human speech output in your computer programs. Add voice go games. Program verbal prompting for the operator of your business system. Use verbal warnings under program control as an enunciator in commercial security on control rooms. Create educational programs that verbally coach the student.

SuperTalker is a new Mountain Hardware peripheral system which allows the Apple II computer to output exceptionally high quality human speech through a loudspeaker under program control. Output may also be directed through any P.A. or stereo system. Initially, spoken words are digitized into RAM memory through the system microphone. Speech data in RAM may then be manipulated like any other stored data.

The SuperTalker peripheral system consists of: The SuperTalker peripheral card which plugs into a peripheral slot on the Apple II; a microphone; a loudspeaker; easy-to-use operating software and documentation; plus, two ready-to-run SuperTalker programs.

In order to achieve maximum utility using SuperTalker, the SuperTalker Disk Operating System permits output of human speech under program control with direct I/O routines. It also provides a preparation program which permits the creation of voice files on diskette. BASIC program routines are provided which require only one-line statements to output a word or phrase. Routines also support cassette storage.

SPECIFICATIONS:

- Human speech output under program control made easy with fully documented operating system software.
- Hardware includes SuperTalker Card, Loudspeaker, and Microphone for speech input.
- Four software selectable rates for digital speech data entry: 500 Bytes/Sec.; 1 KB/Sec.; 1 KB/Sec.; 4 KB/Sec. Perceived speech output quality improves as rate is increased.
- Operating system software provides for storage of digitized speech on diskette for memory optimization.
- Store about 50 Sec. Real-Time speech output at 2 KB rate on one Apple II diskette.
- Four software selectable settings that control output volume through speaker.
- On-board two watt audio amplifier to drive speaker provided or output through a stereo or P.A. system.
- Frequency Response: Filtered to 300 Hz—3000 Hz human voice range for OUTSTANDING clarity.
- Two ready-to-run programs: ACCENT, a talking language translator, and TALKING COLOR MATH, a talking arithmetic game illustrate program uses.
- VPS, Vocal Preparation System is the Operating System and Editor that leads you to the creation of your own talking programs.

ROMWRITER™

Firmware in ROM is as fast as your software in RAM, but in ROM it frees up RAM memory space for companion programs. And, there never needs to be a LOAD from disk! Create firmware for your Apple by programming EPROMs with RomWriter.

Many frequently used programs really ought to be installed as firmware. ROM-based firmware permits a "power up and go" configuration. Use RomWriter to create firmware for peripherals such as printers or create program cards. By installing EPROMs that you have programmed on Mountain Hardware's ROMPLUS +™ board, program cards of up to 12K in length may be created.

Programs 2716 EPROMs (5V). All 2K or part of the EPROM can be programmed. Installs in a peripheral slot. EPROMs mount in a zero insertion force socket. A switch turns power off to the socket so EPROMs can be inserted or removed without powering-down your computer. A Write Protect switch is provided for programmed EPROMs while running. A \$CFFF OFF switch to suppress this command during programming or RUNning. EPROMs can be RUN on RomWriter, or ROMPLUS +™ when creating firmware systems.

Virtually foolproof programming. Specify a Start and End address in the EPROM and either a Disk File name or a starting address in memory. Desired code will be BURNed followed by a VERIFY. Additionally, existing EPROM code can be merged with desired changes to facilitate EPROM debugging. Easy data entry and high reliability are designed into RomWriter. Programmed EPROMs can be RUN while residing on RomWriter or can be transferred to Mountain Hardware's ROMPLUS +™ board.

APPLE MUSIC

In the beginning there was the APPLE playing the theme from Star Wars or maybe Appleodan, but today the APPLE is entering into some very sophisticated music synthesis up to nine voices. Companies are producing interface boards that will introduce your APPLE to the beautiful sound of music.

MUSIC SYNTHESIZER

Three simultaneous voices — single circuit card contains three channels. Interactive graphics music entry — high resolution screen displays entered music in traditional sheet-music format. Fully assembled and tested — plugs into any Apple expansion slot. Complete, ready to use — comes with manual, software cassette, and audio cable which connects to your home stereo system. Stereo outputs — stereo is available when using two or three units. Pitch, envelope, and volume — easily controlled using software provided with unit. Expandable to six or nine voices — use 1, 2, or 3 units for 3, 6, or 9 voices. No “music languages” to learn — interactive music entry program uses game paddles to position notes on musical staff. Full piano range — eight octaves with 24 notes per octave. No tuning required — crystal-controlled pitches are accurate to within 2% . Save and load songs — using cassettes or disk. Recreational — relative enjoyment factor (REF) typically exceeds 82.

The Hardware (circuitry) of the synthesizer takes advantage of the latest advancements in digital and analog integrated circuit technology. Pitches are produced by an accurate and highly stable crystal-controlled circuit which never requires tuning. The synthesizer can produce half steps (the piano scale), quarter steps, and even slide between quarter steps. An eight octave range is available, which includes the full piano range.

A unique volume control circuit allows a pitch to be produced at any of 256 programmable volume levels. Combined with the powerful software included with each unit, this circuit produces a virtually limitless selection of envelope contours.

Each synthesizer can produce three tones at once, using three nearly identical “channels.” Pitch, volume, envelope, and other settings can be selected for each channel independently from the other channels. Two synthesizers can be used for six simultaneous tones, or three for nine tones. Stereo outputs are available when using two or more synthesizers.

With the Apple Music Synthesizer, you can program a piece of music straight from the score, and play it back instantly. Even the most complex pieces can be entered and played back accurately, with perfect timing. During entry, the score as entered so far is shown on the Apple’s display in traditional music notation. Measure bars are automatically inserted at the proper places, immediately identifying any incorrect measure lengths. Once entered, a song is easily modified. Grace notes and other embellishments can be added or removed, and the piece played back to see how the modifications sound. While new parts can be added without difficulty.

The synthesizer is particularly useful for trying out new melodies, especially for pieces which are difficult to perform on a piano or which involve more than one instrument.

You don’t have to be a musician to enjoy the Apple Music Synthesizer. Whether you want to play songs programmed by others, program them yourself, or just create interesting sounds, the synthesizer is easy to use.

The music entry program (supplied with each unit) allows you to start programming songs right away—no complicated “music languages” to learn. Typing is minimized by an innovative entry system which uses the “game paddle” knobs and interactive graphics capabilities of the Apple computer. One of the knobs is used to select note durations and other functions

using a pointer which moves across the display to the various "menu items" shown (see display photo on front side). The other knob moves a note-shaped "cursor" up and down on a standard musical staff; when the cursor is at the correct note, pressing a button enters the selected pitch. Key signatures are handled automatically by the entry program. A variety of commands, entered using the typewriter-like keyboard of the Apple, simplify music entry and editing. MEASURE:23 for example, causes the score to be displayed starting with measure number 23. Typing PLAY causes the song to be played. During playback, the tempo (speed) of the song can be changed at any time by rotating one of the game paddle knobs. Doubling the speed does not raise the pitch an octave (like a tape recorder would), the frequencies of the notes remain the same at any tempo.

If you're a real software wiz, the kind of person who just can't resist creating wonderful new programs, the Apple Music Synthesizer is ideal for you too. Detailed programming instructions in the manual, plus convenient subroutines, allow you to do your own thing. The CHROMA subroutine is used for chromatic frequencies, sliding, vibrato, pulse width control, and other effects; PERFORM is used for easy control of one to nine command sequences, simultaneously performed.

An empty socket on the circuit card provides access to the three TTL-level square wave pitch outputs (pins 3, 4, and 5) and the mixed audio output (pin 11). Hardware enthusiasts can connect these outputs to their own audio processors for even more versatility.

The programming simplicity, tuning accuracy, envelope control, and other features make the synthesizer a powerful tool in the classroom. Composition, score writing, pitch and interval recognition—the synthesizer is useful in nearly all phases of instruction. Programming is so easy—and fun—that your students will not only be eagerly participating, but many will be interested in developing new programs for study in other musical areas.

The ALF synthesizer, along with an Apple II computer and a home stereo system, forms a complete computer-controlled music synthesis system. The synthesizer is a single circuit card which fits inside the Apple. Audio output cables, with standard phono plugs, are supplied to connect the synthesizer to your amplifier and speakers.

Your Apple II computer should have 24K or more memory (plus any memory needed for the disk system), and a black and white video monitor is recommended (although any good quality television set will work).

ALF part number 10-5-16. Each unit contains an owner's manual, software cassette, circuit card, and audio output cable.

TIMING MODE INPUT BOARD FOR USE WITH THE 10-5-16 APPLE MUSIC SYNTHESIZER

Easy installation — plugs into any Apple expansion slot. Cable plugs into synthesizer socket. Complete software compatibility — just change TSL0T in Entry and Play. Allows dynamic tempo control — makes ritards and accelerandos simple. Automatic playback tempo — “Game paddles” are not required to set playback speed. Allows use of the “Tempo” item — insert tempo items to set or change the playback speed at any point. Uninterrupted “Album” playback — eliminates paddle adjustments during album playback (with DISCO). Select automatic or manual tempo — just set the “suggested speed” to zero for automatic, non-zero for manual. Useful as an input port — electronic experimenters can use the unit as a 6 bit unlatched input port (5 bits when using the synthesizer. Consumes one synthesizer channel — when activated (speed set to zero), one synthesizer channel is not available for music. All channels are available when not activated.

INSTALLATION AND USE

The Timing Mode Input Board is plugged into any Apple expansion slot. The 14 pin “header” (on the wire connected to the board) is plugged into the empty socket on an ALF Apple Music Synthesizer. The header can be plugged in either of two ways so as to aim the wire towards the front or towards the back of the Apple, whichever you prefer. Make sure all 14 pins go into the socket.

Line 20 in Entry and Play is normally 20 TSL0T = 8 and must be changed to the proper slot number. For example, if you plugged the Input Board into slot 3, change line 20 to 20 TSL0T = 3.

If the suggested speed is zero, then song tempo (playback speed) will be controlled by the Input Board automatically; if the speed is non-zero, song tempo will be controlled by Paddle 0 as usual. The song must contain a TEMPO item in one of the channels prior to the first note, rest, or call to a subroutine containing a note or rest. See the TIMING MODE section in your synthesizer manual for further details, especially when using three synthesizers.

When the Input Board is activated, it uses one channel of one synthesizer. The channel used must be Channel 0 of the synthesizer the InputBoard's header is plugged into. When using Entry or Play with two or three units, the header must be plugged into the synthesizer in the highest numbered slot when using two units, and the next-to-highest numbered slot when using three units.

TECHNICAL

The Input Board can be used to read the status of 6 TTL signals. The status can be read in bit 0, 1, 2, 5, 6, and 7. The inputs of these bits are marked on the circuit card as D, D1, D2, D5, D6, and D7. Bits 6 and 7 have an additional connection point labeled 6 and 7. These six signal inputs connect to an 8T97 or a 74LS67 buffer which enables the inputs into the CPU's data bus whenever any of the 16 “device select” memory addresses associated with the particular expansion slot occupied by the Input Board are read. These memory addresses must not be written to.

ALF part number 10-5-17. Each unit contains a circuit card and an instruction sheet.

MMI MICRO COMPOSER

The MICRO COMPOSER is an APPLE II compatible, low-cost music system designed by the folks at MMI. Our music software was designed by leading experts in music education. A simple step-by-step instruction manual leads you through entering, displaying, editing, and playing music with up to four voices—soprano, alto, tenor, and bass. You can change the sound of each voice to reed, brass, string, or organ sounds and you can even color your own music sounds!

- Play up to four simultaneous voices
- See all 4 voices at the same time you're hearing the music—a must for music editing!
- Enter music notes by a fast, simple and well-tested coding system.
- Program the pitch, rhythm, and timbre of the music. Tempo is varied by the Apple paddle.
- Choose 7 different tone colors for each voice or create your own tone color.
- Compose, edit, display, and play music through an interactive, command-driven language that's easy to learn.
- Save your music on disk or cassette.
- Hear quality music sound at low cost through the MICRO MUSIC™ DAC card. No amplifier needed! Designed for MMI by Hal Chamberlin and Micro Technology Unlimited.
- Select from future MMI music instruction software to accompany the MICRO MUSIC DAC.

Comes with an instruction manual, software disk or cassette—in either Integer or Applesoft ROM BASIC, and the MICRO MUSIC DAC music card. Plug the MICRO MUSIC DAC into the APPLE extension slot and connect the audio cable to a speaker.

\$220.00

JUKE BOX

The JUKE BOX is an extremely flexible low cost synthesizer designed to plug into any 48K Apple computer (Applesoft or Apple plus). Each board is capable of producing three simultaneous voices through three separate channels. Pitch, rhythm, tempo, attenuation, and envelope can be selected and controlled for each channel independently from other channels. An eight ohm speaker can be plugged into and driven by the synthesizer.

Up to six music boards may be inserted to create eighteen notes. In addition, cards can also be daisy chained to increase the number of voices per speaker. As an illustration, a computer containing four synthesizers might be configured in the following manner. One speaker per board would enable the user to produce quadrasonic sound, three notes per speaker. These same boards could also be daisy chained into sets, one speaker connected to each set of cards. This would generate stereophonic music with six voices per speaker. As a third possible combination, twelve voices of monaural sound would result if all four boards were daisy chained and one speaker was used. For those applications such as sound effects, where quality is of secondary importance, the synthesizer can even be connected directly to the Apple internal speaker.

Peripherals

ADD-ON MEMORY

If you purchase your Apple with 16K of memory, you may have found that larger programs cannot fit into your memory. If you choose to add a disk drive, added memory is almost a must. Two additional rows of 16K each can be added. Each row consists of 8 4116 memory "chips" that are currently being offered by Apple and many independent sources. These chips are manufactured by several companies and they range in operating speed. It is suggested by most dealers that these devices operate no slower than 250 nanoseconds. Although more expensive, your safest buy is the add-on kit supplied direct from Apple. They also supply a software program called Ram Test which will test all of the addresses on each device.

Offers a pre-packaged 16K Apple "Upgrade" kit which includes eight tested and guaranteed chips, the memory select units that plug into the sockets on the end of each row, and installation instructions.

MR-500 MARK SENSE CARD READER

Now, all you need is a standard #2 pencil, a card, and our new MR-500 mark sense card reader to quickly and easily enter data into your favorite microcomputer.

One — program the card by marking with the pencil. Two — feed the card into the reader slot. Three — the reader automatically turns on, the card is fed through, and data is instantly entered into memory. It's the simple low-cost alternative to keyboard data entry.

The applications for our low-cost MR-500 are endless. For small businesses, it's ideal for inventory, time cards, labor distribution (just to name a few). Educators will find that the MR-500 streamlines test scoring, attendance records, and grade reporting.

The MR-500 is lightweight — 4 lbs. Compact — a 4½-inch cube.

APPLE SILENTYPE THERMAL PRINTER

An advanced text and graphics printer for the Apple II personal computer, the quiet Silentype thermal printer delivers paper copies of anything the computer can display on a video monitor or television screen.

Completely silent when printing, the Silentype makes only a slight sound during each line feed. A seven-dot, thick film printing element produces five- by seven-dot characters and graphics on standard thermal paper. The Silentype prints up to 80 characters per line on 8½" wide, roll-fed paper. The Apple II powers the printer.

Flexibility is built into 2K bytes of firmware on an interface card supplied with the printer. Users can change parameters directly, or from within via applications programs.

Keyboard-adjustable parameters allow selection of: print displays in black-on-white or white-on-black modes, eight-dot intensity values for varied printfaces, a simultaneous print-and-display mode, and print-displayed-pages command, unidirectional or bidirectional printing, line space in 1/6" increments, left and right margins, and paper advance length for the form-feed command.

Other features include upper case Ascii only; graphics with the full set of 96 character; upper and lower case Ascii; and continuous text. Graphics resolution is 3600 dots per square inch.

Typical graphics printing rates are one minute per screen in the bidirectional mode, and one-and-one-half minutes in the unidirectional mode. Graphics printing speed is up to 240 dot-columns per second. In text mode, the maximum printing rate is 40 characters per second.

Suggested retail price for the Silentype thermal printer includes interface and Apple's extended warranty.

SYMTEC LIGHT PEN

The Light Pen is a joint project between Symtec Corp. (hardware), ABW Corp. (software and documentation), and Computerland of Southfield (marketing). It comes ready to use, and is supplied with full documentation and software. It will operate in text, low res., and high res., graphics modes, and is capable of resolving one high res. point. You will find below a complete description of each component of the package and other information of interest.

From the users point of view, it is possible to have the Light Pen perform any type of system control which normally can be accomplished through the keyboard. Selecting programs to run from the disk catalog, turning on a printer, and basic menu select functions within a program can all be done.

Hardware: Pen, cord, and interface card.

The interface card plugs into the Apple bus, and has a lead to be clipped to the video jack from the rear.

Software: Six Programs.

The software has pen servicing subroutines, a calibration routine, and demo programs, including Light Pen checkers. The software is designed to be used in slot 5, but can easily be changed to operate in any slot 1-7, and the instructions for doing so are included in the manual.

Documentation: The manual contains complete installation, software and operational descriptions. One of our aims was to produce a user oriented manual which contained straightforward descriptions that the beginning Apple programmer could understand if he really wished. Further, there are descriptions of the high res., low res., and text modes with memory maps. This information is useful even without a Light Pen. A table of contents from the manual is included in this package and manuals are available separately at a cost of \$12.00

EPROM

Add capability to your system monitor or BASIC for business or other applications. Add commands to the operating system.

New operating systems can be put into permanent memory with our EPROM programmer and plugged directly into your APPLE II board with our INTEL 2716 socket adaptor.

Add to or replace existing APPLE II ROM software with operating systems of your own design. Other software systems similar to FORTRAN, FOCAL, COBOL, ALGOL, other BASIC's, etc. may be incorporated into your APPLE II ROM.

FEATURES:

- Fully assembled.
- Completely self-contained.
- Textool Zero insertion force socket for EPROM.
- Onboard 25 volt power supply.
- Double sided plated through holes on fiberglass PC board
- Gold plated edge connector.
- Fully socketed.
- Latest low-power Schottky IC's

ADVANTAGES:

- Fill two empty ROM slots on Apple II board.
- Replace existing ROM chips on APPLE II board.
- Put printer driver in permanent memory.
- Put MICROPRODUCTS Assembler in permanent memory.
- Put other peripheral interfaces into permanent memory.
- MICROPRODUCTS will custom program EPROM's with your program on request.

COMPUTER/TYPERWRITER MECHANICAL INTERFACE

The Rochester DATA I/O Pak is an electro-mechanical device designed to interface between a conventional powered carriage return electric typewriter and any digital computer configured with a suitable electronic interface.

The I/O PAK consists of 52 solenoids (coils) riveted to a printed circuit board. A plunger with a spring is inserted and rests in each coil, extending out of the bottom of the printed circuit board. Each of the coils is actuated by selecting one X and one Y lead of a matrix. The I/O PAK mounts or rests on the typewriter by its own weight. Two 1/8" x 1/2" white plastic washers are taped to the typewriter (double-sided sticky tape) one on each side of the space bar. The I/O PAK has four adjustable mounting screws. The two lower ones rest in the washers. For normal typewriter use, simply lift the I/O PAK off. It can be replaced just as easily; there are no other modifications required to your typewriter.

The lower half of our plunger shaft is nylon. The nylon strikes the typewriter key. The nominal force required to actuate a typewriter key (shiftlock) is about three ounces. Our solenoids are designed to closely match the operating force of a normal typist. The nylon will not leave a mark on the keys. Incidentally, the average secretary will type at 65 words per minute or 325 characters per minute. Since the I/O PAK can drive your typewriter to the limit, say 15 CPS, you can generate 180 words per minute.

Software for the Apple resides in upper memory, away from your programs and occupy about 500 bytes. The software will operate in all memory size machines and is available on disk and cassette. The software is self-prompting and permits you to adjust every conceivable typewriter timing variable. Once you have done this for your typewriter you can store the program.

APPLETHROTTLE

That's right! The APPLETHROTTLE will turn your game paddles into a speed controller. By simply pushing a button, you can stop your computer for as long as you want. Release the button, and your computer enters a slow-motion mode with one paddle controlling the speed. And if that isn't enough, look at these additional features:

- Plugs into any slot
- Works with machine language, Integer BASIC, and Applesoft
- Normal — slow — stop
- Use to LIST, TRACE, RUN, etc.
- NO SOFTWARE to load
- Unveil program secrets

And there's more! No more multiple LIST commands to view small program sections. With the APPLETHROTTLE, you'll be able to list or trace long programs while watching your program flow into slow-motion. So get in control with the APPLETHROTTLE and order yours today!

ROBOT I

ROBOT I is a computer-controlled car. It is radio controlled—no wires to the car—for the utmost in fun and flexibility.

Simply plug the peripheral control card into an available peripheral bus connector in the Apple II, load the demonstration tapes, add batteries, and you're up and running. A few short minutes with the ROBOT I instruction manual and you will be writing your own ROBOT I control programs easily in BASIC.

Used with the Heuristics Model 20A SpeechLab™ voice recognition unit, the ROBOT I will run and maneuver at your spoken command. Simple commands such as "Left Turn," "U Turn" may be easily programmed for the ROBOT I and then called up by voice when desired while watching the car perform the intended sequence of operations.

Using the computer to store sequences of commands given will allow the user to implement more complex spoken orders such as "Come Here," for example.

ROBOT I car action control may consist of pre-programmed routes, interactive control via the keyboard, or Heuristics Model 20A SpeechLab, or a combination of these techniques. Car Motion (forward/stop/reverse) is under complete computer control and direction (left/straight/right) may be changed while the car is moving or stopped. The radio link is effective at distances up to about 300 feet.

ROBOT I comes complete with car, radio-link controller, Apple II peripheral interface card, preprogrammed demonstration cassette tape, and instruction manual. The car and radio-link are warranted for 30 days, and the controller interface card for one year.

FEATURES SUMMARY

Commands Motion Direction — Forward, Reverse, Stop, Left, Right, Straight

Peripheral Interface — Apple II Computer

Programming Language — BASIC or assembly language

Manual Operation — Car controlled directly from controller without computer

Car Size — 30 cm x 18 cm x 10 cm (12" x 5" x 4" H)

Car Colors — Red, White, Yellow, Blue

Batteries (not supplied) — Car requires 4 "C" size cells. Controller requires one 9V "radio" cell

Weight (without batteries) — 2 Kg (4 lbs.)

Warranty — Controller one year. Car 30 days.

D. C. HAYES MICROMODEM II tm

FEATURES

- Auto-Answer
 - Auto-Data Transfer
 - Supports Originate Mode
 - FCC Registered
 - On-board ROM firmware
 - Manufactured by D. C. Hayes Associates, The Micromodem Specialists
 - Direct connects your Apple II with any time sharing computer in North America
 - Auto-Dial
 - Bell System 103 Compatible Modem
 - Supports Answer Mode
- Direct-Connect Microcoupler. No acoustic coupler distortion or loss
- Available through your local Computer Store
 - Backed by the D. C. Hayes Associates Warranty
 - Greatly expands your present capabilities
 - Extremely simple to connect

The D.C. Hayes Associates Micromodem II tm package is a complete data communications system specifically designed for your Apple II personal computer system. It consists of two microcomputer products and two connecting cords. The first unit, the Micromodem II plugs directly into your Apple II. It provides all the functions of a serial interface card plus programmable automatic dialing and answering. The on-board ROM firmware adds remote console, terminal mode and simplified implementation of more sophisticated applications with BASIC programs.

The Microcoupler is supplied with the Micromodem II. It is registered with the FCC and allows you to connect directly into the telephone system. It is compatible with all North American standard telephone lines and FCC approved for direct connection in the U.S.A. The unit is not approved for use on equipment originating calls in Canada; however, calls going into Canada and Mexico are accepted by their equipment. You need no additional equipment from the telephone company. Because this is a direct connection, there is none of the distortion associated with acoustic couplers. It was those distortions that caused losses in transmissions. Now your communications are processed with incredible accuracy.

The Micromodem II is very easy to install. Simply insert the Micromodem II circuit board into any Apple II expansion slot after slot 0. Then plug one end of the ribbon cable into the circuit board and the other end into the Microcoupler tm. Snap one end of the telephone cable into the Microcoupler and the other end into your standard modular telephone jack. You are now completely installed. Just notify the telephone company that you are using an FCC registered device. There is no extra telephone company equipment needed.

SPECIFICATIONS

Data Format	Serial, binary, asynchronous 7 or 8 data bits, 1- or 2-stop bits odd, even, or no parity.
Lower case characters	Can be optionally converted to upper case, or can be passed through unmodified.
Firmware	1024 byte read only memory (ROM)
Power consumption	1.5 W Typical
Card size	7" x 3" including connector fingers
Microcoupler size	5 1/2" x 3 1/4" x 1 3/8"
Modem compatibility	Bell System 103-compatible originate or answer mode, dial pulse dialing and auto-answer — -50 dBm receive sensitivity, -10 dBm transmit level, 110 or 300 baud data rate
FCC registration	FCC Registration No. B1986H-62226-PC-E. Ringer equivalent 0.4B. Connects with modular jacks RJ11W or RJ11C.
Supplied with	Modem interface card, firmware in ROM, Microcoupler tm, connector cables, owner's manual.

GRAPHICS TABLET

The Graphics Tablet is an image input device that allows the user to enter pictorial information directly (by sketching or tracing) from:

- maps and photographs
- logic diagrams and schematics
- histograms
- architectural drawings
- fine art

Tracing a shape on the tablet surface converts the image to digital values. This information is displayed on the video monitor and may be stored on disk for later processing by the Apple.

The 11" x 11" tablet surface area facilitates entry of large and complex figures. Line segments may be specified by their endpoints, allowing lines to be accurately drawn by hand. A reducer function assists the user in doing detailed work. Area and distance calculations (in user-specified coordinates) may be performed on the resulting figures.

Powerful software provides a comprehensive set of functions selected with the stylus from a menu. This software is written in Applesoft BASIC so the user may easily change or add menu functions to suit a particular application.

- Direct input simplifies production of complex images
- Hand calculations of graph coordinates and figure dimensions are eliminated
- Coordinated cursor allows function selection from command tables on tablet
- Control program in Applesoft BASIC makes for easy user modification
- Tablet provides 167 points/inch resolution for detailed figures
- Allows user specified functions

Unit consists of stylus, external digitizing tablet, and plug-in interface card.

Tablet Size: 15" square (11" square active area), 1" high

Resolution: 167 points per inch

Input Modes: Continuous or upon command

Data Rate: Up to 100 coordinate pairs per second

Scaling: User selectable

Minimum System Requirements: 48K RAM, Applesoft BASIC, Disk II

Supplied with:

- Tablet, Interface Card, Connecting Cable and Stylus
- Manual and Transparent Mylar Overlay
- Control Firmware in ROM
- Software Programs on Diskette

MICROBOX

MICROSTIK

MICROBOX AND MICROSTIK

A SIMPLE COMMAND from the Apple keyboard or a Basic Program can switch an external device. Connect AC loads, such as lamps, motors, relays or solenoids directly through the MICROBOX's 4 AC OUTLETS. Loads can range from 0 to 220VAC and draw up to 200 Watts each. Solid State Switching ISOLATES the load from your Apple for complete safety. Four LEDs provide a visual on/off status of each load.

A complete instruction/tutorial manual is included with the MICROBOX.

The MICROSTIK is a sturdy, two axis joystick. Metal cable connectors assure trouble free usage over time, and enable extension cables to be added easily. Use the MICROSTIK to add real-time input to your game, graphic or experimental programs. Each MICROSTIK contains a PUSHBUTTON for added input possibilities.

APPLESHIFT — A UPPER/LOWER CASE MODIFICATION FOR THE APPLE II

A package containing instructions for hardware modification of your Apple keyboard, machine language subroutines for input and screen display (lower case letters appear on your screen as upper case letters in normal mode; lower case letters appear as upper case letters in inverse mode) and an INTEGER BASIC demonstration program called TEXTPAGE.

TEXTPAGE allows you to enter, edit, store on disk, and print (using your own driver) 55 lines of 80 characters. Disk TEXTPAGE requires a DOS system with at least 24K. Tape version (available with listings only, no tape) needs 16K.

LIGHT PEN

A low cost light pen is now available for simple installation and immediate operation in applications such as bar graphs, charts, and games. The Apple II Light Pen is supplied with three demonstration programs on cassette.

The Pointer software driver performs seven functions which include selection of graphics mode and page two display, search for X and Y ordinates, a test for odd/even Y ordinate, set page one display, and return to calling program.

APPLE II JOYSTICK

The PROGRAMMA JOYSTICK is an input peripheral that attaches to the Apple II Computer's game 1/0 Port. The JOYSTICK is a must for the serious game player, and it offers a degree of linearity not currently available with other joysticks. The ease of maneuverability and the availability of the "functional" switches make the PROGRAMMA JOYSTICK a much needed enhancement to any Apple II Computer System owner. The PROGRAMMA JOYSTICK comes completely assembled and tested, including a User's Guide.

PROGRAMMA EXPANDA-PORT

The PROGRAMMA EXPANDA-PORT is a multi-port expander for the game 1/0 port of any Apple II computer system. In addition to allowing expansion for up to six devices, the EXPANDA-PORT contains a built-in speaker that replaces the function of the Apple II's speaker. The switches on the EXPANDA-PORT allow for the selection of the specific device desired and for the switching of that device. No unplugging of any device connected to the EXPANDA-PORT is required. The PROGRAMMA EXPANDA-PORT comes completely assembled and tested, including a User's guide.

The PROGRAMMA JOYSTICK and EXPANDA-PORT are available on a limited basis through your local computer dealer. Apple II is a registered trademark of Apple Computers, Inc.

LIGHT PEN

A self-contained light pen which plugs directly into the Apple has been announced by the 3-G Company. The 3-G Light Pen makes it possible to bypass the Apple's keyboard and interact directly with the information displayed on the CRT screen. A "menu" can be displayed on the screen and the user can make a selection from that menu by using the light pen. The Light Pen is completely assembled and ready to plug into the Apple game paddle port. A demonstration game cassette, sample program and complete programming instructions are included with the pen.

INTROL HOME CONTROL SYSTEM

Introl Remote Control Systems let you extend the reach of your computer to monitor and control AC devices remotely. Turn on the lights. Turn them off. Turn on the stereo or TV. Sprinkle the lawn. Turn on the security system automatically when you're gone. And find out whether all your instructions got through loud and clear in the monitor mode.

Introl operates over your existing AC wiring. That means any AC socket can be a control point. No additional wiring needed to string to remote locations

HOW IT WORKS

Just about any AC device can be turned on and off by computer commands which flow along the house or building's existing AC wiring. The Introl System consists of an AC Controller which transmits commands over the AC wiring and Dual Channel AC Remote boxes which receive and execute commands. The AC Controller board plugs into the computer bus and connects to existing AC wiring through an AC Interface Adapter—which comes off the board and plugs into any convenient AC socket. The AC Controller then impresses a code-modulated 50 KHz signal on the AC wiring and transmits it to any operative remote.

Up to 32 Dual Channel AC Remote boxes may be plugged into any sockets in the wiring system where you seek control. One or two AC devices may be plugged into each Dual Channel AC Remote box. Thus, you can control and monitor up to 64 separate happenings with one AC Controller board.

Each channel in every AC Remote box continuously monitors the code-modulated signal from the AC Controller. When it receives a code corresponding to its address, it executes the command that follows—turning power on or off to whatever AC device is plugged into that channel.

Further, the Controller can poll any channel and determine its status. Send a command and determine its status. Send a command to turn a lamp on and receive a report back that the command was received and executed. Bidirectional communication provides error-free operation so you're never in doubt.

SIMPLE TO INSTALL AND USE

Introl is simple to install. Plug the AC Controller into a computer bus, connect the AC Interface Adapter to the Controller and the AC power line. This connects the Controller to the AC wiring and completely isolates the Controller and your computer from the 110/220 volt power, while allowing the control signals to pass. Plug Dual Channel AC Remotes into AC sockets at points of control and you're ready to start programming your computer for control functions.

SOFTWARE

All the software sub-routines for most BASIC's are included. And they're written in clear, readily applicable form. That means you can write programs easily . . . and/off . . . poll and check status of a remote. For even easier programming, use Introl BASIC.

ADD A REAL-TIME CLOCK

Add Mountain Hardware's Apple Clock and program devices to go on and off at any time of the day or night, any day of the week or month . . . for years.

APPLICATIONS UNLIMITED

Program lights to go on and off while you are away on vacation, changing from one room to another in the course of every evening. Change the patterns from night to night.

The ability to monitor power usage throughout a home or building is a natural for this system. Your computer can shut down high energy users on a priority basis.

Monitor and control your solar heating system, programming for optimum energy utilization.

The best time to water the lawn happens to be 2:00 a.m., when most of us are sound asleep. Program your sprinklers to come on at this proper time and shut off after 15-20 minutes.

For the photographer, a fully automated darkroom can save time and energy, and provide precise and consistent results every time.

SPECIFICATIONS FOR AC CONTROLLER

- Control up to 64 independent channels remotely. (32 Dual Channel AC Remotes)
- Communicates up to ½ mile or to the local transformer.
- 50 KHz pulse coded modulation.
- Bidirectional system allows communication to and from each remote channel.
- Uses standard 8 bit UART data format.
- Every transmission is checked for parity, framing, overruns and address errors.
- Controller board occupies one I/O expansion slot on the Apple II or two ports of an S-100 system.

SPECIFICATIONS FOR DUAL CHANNEL AC REMOTE

- Operates on available AC voltage. Specify 110 or 220.
- Two independent 500 watt channels per remote unit.
- Unit is housed in an attractive walnut box.
- Manual override switch for each channel.
- Internal fuses provided for each load.
- Self-calibration circuit allows easy alignment to Controller.
- Address selection on-board via jumpers.

PRICES

Introl System for Apple II or S-100 computers. Consists of one AC Controller unit, AC Interface Adapter, calibration cable and one Dual-channel AC Remote Station including handsome walnut case, line cord, AC plugs and complete documentation. Additional Dual-channel AC Remotes are \$99. For 220 V operation—inquire.

VERSAWRITER

VersaWriter is a drawing tablet for the creation of full-color, high resolution graphic images on the Apple. Images may be drawn freehand or traced from existing images (cartoons, photos, drawings, etc.) using the simple pivoted two-arm pantograph with magnifying crosshairs. After an image is drawn, it may be rotated, shrunk, or enlarged. It may be moved across the screen and alternated with other images thus providing high-resolution animation. The image may be colored with varied colors.

Graphical images made with VersaWriter and stored on tape or disk may be called from other programs or even imbedded in them. With VersaWriter, you don't have to worry about assembly code, counting pixels or other cumbersome hi-res graphics entry and retrieval techniques. VersaWriter graphics can be used in all types of programs—games, statistics, engineering, artistic, and educational. Your only limit is your own imagination.

Disk 1 contains the basic plotting, scaling, movement, rotation, color, transfer and recall software. This disk also includes routines which create "shape tables" from your figures to be used in other programs. Disk 2 contains applications software. One program adds five sizes of upper and lower case text to drawings, another adds standard electronic and digital symbols, while a third calculates distances and areas.

VersaWriter requires a 32 or 48K disk system, Applesoft in ROM or an Apple II Plus.

TAPE ACTIVATOR

The TAPE ACTIVATOR allows you to control an audio tape recorder directly from your Apple II computer. Start and stop commands are related from the computer to the tape recorder via the CANDEX PACIFIC TAPE ACTIVATOR.

The activator is connected to the tape recorder via the remote jack which receives the start/stop commands. It is also possible to control other devices remotely using the Candex Pacific Tape Activator so long as the activator current rating of 1/2 amp. is not exceeded.

The activator plugs into the game I/O connector on the Apple computer. Its connector allows another activator or the Apple game controls to plug into it so that multiple devices can be used simultaneously. There are four models of the Tape Activator. Each model is addressed selectively by different poke commands.

Note that if more than one activator is to be used with a single Apple computer, each activator must be a different model. Do not use more than one activator of the same computer.

Each activator comes complete and ready to use. An instruction sheet is included which contains a listing of software commands for controlling the activator.

DATA ENTRY PAD FOR APPLE II

This is the same Keypad that Apple Computer displayed with their APPLE II business systems at the National Computer Conference in New York City. The Keypad is engineered for use with the APPLE II or APPLE II PLUS computers and is designed to simplify tedious data entry tasks. It provides 13 keys (0-9, decimal point, minus sign and ENTER) and is easily attached to any APPLE II computer which it matches in color and form. Fingering and arm position is simplified by the low profile design which allows either hand-held or desk top use. The key switches are quality engineered for exceptional reliability and performance. (Uses Datanetic's DC-50 switches which are guaranteed for at least 100 million operations.)

The Keypad is a cost effective tool for data entry tasks and makes an excellent addition to your APPLE II computer system.

FEATURES:

- Quality key switches
- Does not use I/O slot
- Rugged NOREL Case
- Standard Accounting layout
- Molded Cable

TYPICAL USES:

Accounting: Payroll, Inventory, Bookkeeping
Industrial Scientific: Estimating, Statistics
Educational: Classroom, Laboratory
Personal/Home: Finance, Games

KEYBOARD

Thirteen (13) numeric plus special function keys

ELECTRICAL

Contact Ratings (resistive load)
Volt-amp range — 0.3 to 50 MVA
Current Range — 0.3 to 10 MA
Voltage Range — 0.5 to 30 VDC
Contact Resistance — 0.200 ohm max.
Contact Bounce — 2.0 MSec max.
Insulation — 100 megohm min. at 100 VDC
Capacitance — 10 pf max. at 1 k KHz

MECHANICAL

Contacts Gold-plated copper alloy
Pre-travel .110 +/- .015 inches
Total travel .180 +/- .010 inches
Release Point (above make point) .040 +/- .010 inches
Operating Life 100,000,000 key strokes

ENVIRONMENTAL

Operating Temperature +32° to 140° F
Storage Temperature -32° to + 160° F
Relative Humidity 95% max (non-condensing)
Vibration 10-55hz at .06 Displacement

PHYSICAL

Weight less than 14 oz.
Height 1.5 inches
Length 6.3 inches
Width 3.4 inches

INSTALLATION

Keypad furnished with 40 pin connector which installs under decoder IC on APPLE II keyboard sub-assembly.

CAVRI

Computer Assisted Instruction (CAI) and Videotaped Teaching can now be easily combined to give all the didactic power of CAI integrated with complex, moving, colorful visual materials plus speech, music and sound effects. Using the recently announced CAVRI System, CAI may be inserted into any of the thousands of already existing videotapes, thereby finally breaking through the software bottleneck that has held back the full development of CAI for many years.

A segment of videotape on a topic is presented to a student. The computer is programmed to automatically pause the video player after the segment is finished and to switch control of the TV screen to the computer, which produces CAI text on the materials just presented. Only after the student has shown by responding correctly on the keyboard, that he/she understands the subject matter will the next segment of the videotaped instruction begin. Student responses can be scored, if so desired.

A package consisting of all the materials required to integrate an Apple II and any video player/recorder having remote pause capabilities and two audio channels is available from CAVRI (Computer Assisted Video Recorded Instruction) Systems. The package includes a computer/videotape interface, all necessary cables and connectors, an instructional manual, and a starter cassette containing a group of subroutines (taking up less than 1K of memory) that enable the teacher to write programs from CAVRI with consummate ease. For those who would prefer not to write their own programs, CAVRI provides a service that will write programs for a modest fee.

TEKSIM* the Apple II/Tektronix 4010 Simulator

A read-only memory (ROM) that enables your Apple II to be used as a computer graphics terminal when connected to a computer other than the Apple, i.e. a host computer. Using the high-resolution plotting capabilities of the Apple II, TEKSIM emulates Tektronix 4010-series terminals from the 4006 to the 4014. Characteristics of the 4006 and 4010 are precisely simulated. For the 4012 through the 4014 all features except lower case/variable size characters and enhanced graphics are emulated by TEKSIM. Since the graphical resolution of the Apple II is roughly $\frac{1}{4}$ of the Tektronix (280 x 192 vs. 1024 x 1024), TEKSIM can never produce an image as good as the Tektronix terminal. For most applications, however, image quality will be sufficient, especially when the cost advantage of the Apple-TEKSIM combination is considered.

In conjunction with the Apple, the basic features of TEKSIM allow you to:

- a) Display graphical output from a program residing on a host computer, without having to modify that program.
- b) Send graphical input to a host computer using game paddles or a joystick.
- c) Issue local commands for screen erasure, to return to the Apple monitor, and for sending a BREAK signal.
- d) Produce multicolored graphics displays by making only trivial changes to the host-resident program.

TEKSIM consists of a ROM chip and a special Apple adapter unit that must be plugged into socket D8 inside the Apple II.

LIGHTING AND TRANSIENT SUPPRESSOR

Does your computer sometimes cough, sneeze or have a seizure? It may be suffering from Transient Glitchitis, a cureable digestive disorder. The Blitz Bug can bring fast relief from these symptoms in less than 50 nano seconds. Available without prescription. Use only as directed. Blitz Bug protects your entire circuit, and plugs into any outlet.

The Blitz Bug is a fast-acting lightning and transient surge suppressor. As you may or may not be aware, the commercial A.C. power line is a carrier of transients, glitches and noise pulses. These high voltage short duration spikes can often be in excess of 1,000 volts. Constant bombardment of these high voltage spikes can substantially weaken electronic components, causing intermittent and erratic operation or catastrophic failure in semi-conductors.

The Blitz Bug is capable of clamping line surges to a safe level with a response time of less than 50 nano seconds. It will sustain up to 20 joles of current for a short period of time. Due to the fact that the Blitz Bug is in parallel with the A.C. power line, it offers protection to everything that is on the same parallel circuit and located in the same immediate area. When no voltage spikes are present, the Blitz Bug, for all practical purposes, appears as an open circuit. When a voltage surge, transient static electricity, or noise pulse exceeds the pre-set level of approximately 186 volts, the Blitz Bug conducts for the duration of the spike and clamps all voltage spikes to a safe level, thus preventing damage to electronic equipment. When more than one Blitz Bug is used on the same parallel circuit, the amount of protection increases proportional to the number of Blitz Bugs. The Blitz Bug should always be installed on the protected or fused side of the power line. A severe lightning strike or frequent and sustained transients can permanently damage the Blitz Bug, rendering it inoperative.

APPLE Storage

THE CORVUS 11A DISK SYSTEM

The Corvus 11A is an intelligent peripheral that adds cost effective mass storage to the Apple Computer, while maintaining total compatibility with existing hardware and software. The system package consists of the IMI 7710 "Winchester" disk drive with Corvus intelligent controller, a complete power supply, and an intelligent module for the Apple, consisting of an interface card and its associated software.

ULTRA COMPACT 10 MEGABYTE DISK DRIVE

The disk drive provides eleven million bytes of unformatted magnetic storage in less than two-thirds of a cubic foot of space. The unit features a closed loop servo. This assures accurate and rapid read/write head positioning independent of temperature and other environmental factors. There are three data surfaces and one servo surface on two 8" platters.

The drive electronics are contained in three 7.5 inch by 10.5 inch printed circuit boards which are enclosed within the drive housing. This housing also contains a fourth PC card of the same dimensions which is the Corvus intelligent disk controller.

CORVUS INTELLIGENT CONTROLLER

This controller is based on the Z-80 processor with 16K of Random Access Memory. Firmware for this controller provides such features as:

- Sector Buffering
- Read and write
- Error recovery with automatic retries
- Error statistic monitoring and diagnosis
- Transparent formatting with CRC error detection
- High speed data transfer utilizing DMA

CORVUS/APPLE INTERFACE

The system interfaces to the Apple processor by means of a standard interface card which can be plugged into any of the processor's seven I/O slots. This interface and associated controller can support four disk drives in a simple daisy chain. To maintain total compatibility with Apple DOS, the user is restricted to two drives. The interface card provides a buffered parallel I/O that is capable of transferring data at a rate of over 50 kilobytes/second. The system software is contained in a two-thousand byte ROM which adheres to all Apple standards for such a device.

CORVUS SOFTWARE

The system software resident in the ROM interfaces with the Disk II operating system to provide complete compatibility with DOS commands and existing DOS applications. This is accomplished by maintaining 82 physical volumes on disk that are sector by sector compatible with Apple volumes. These volumes are all concurrently "on-line," such that any application program can utilize the entire data base by simple use of standard DOS syntax.

A master file directory of all volumes is attainable by a simple "CATALOG, V0." Execution of this command will present an output of the File Name of each volume. A volume may be "hidden" (or unlisted) and thus locked out, by simply locking that first File.

The software system features a bootstrap loader that transfers a complete memory image from disk to memory and then executes any Basic Program (either Integer or Applesoft) contained in that image. The generation of this memory image is a standard Corvus utility.

The system also contains copy utilities which can transfer an entire volume from any physical volume (be it hard disk or floppy) to any other physical volume. Additional utilities include complete disk backup to a second CORVUS 11A disk drive and a comprehensive self-diagnostic package which provides transient error statistics from the normal disk drive operation.

PERFORMANCE SUMMARY

Size of Drive	5.5 x 8.5 x 19.25 inches
Size of Power Supply	5.5 x 4.5. x 15.5 inches
Power Consumption	250 watts

DISK II FLOPPY DISK SUBSYSTEM

Many computer applications depend upon rapid access to information. The home computer balancing a checkbook and the business computer managing inventory share this need. To provide for fast, low-cost data retrieval, Apple Computer, Inc. has developed Disk II.

Disk II simplifies the approach to your program library. No longer must you search through stacks of cassettes, or slowly read yards of tape to find the program you want. Now with a few keystrokes, your system will find and load any file by name. And it will do it quickly and reliably.

Disk II gives your system immediate access to large bodies of data. That makes inventory, address file, and recipe programs suddenly feasible. It means you can store a year's worth of financial records in one place, and sort through them quickly. And it allows you to handle many other applications that just were not practical before.

The Disk II Floppy Disk Subsystem consists of an intelligent interface card, a powerful Disk Operating System (DOS), and one or two mini-floppy drives. (The computer will handle up to seven interface cards and 14 drives, for control of nearly 1.6 megabytes of data). The combination of ROM-based bootstrap loader and an operating system in RAM provides complete disk handling capability.

- Powerful Disk Operating Software:
 - LOAD and STORE files by name (Up to 35 Char/Name)
 - BASIC Program Chaining
 - Random or Sequential File Access
- Fast Access Time — 600msec (Max.) Across 35 Tracks
- Individual File Write-Protection
- Full Disk Capability in Systems with as Little as 16K RAM
- Data Transfer Rate of 156K Bits/sec
- Storage Capacity of 116 Kilobytes/Diskette
- High-Efficiency Subsystem Powered Directly from the APPLE II (Up to 14 Drives)
- Completely Assembled and Tested — Not a Kit
- Packaged in Heavy-Duty, Color-Coordinated Steel Cabinet

The Disk II Subsystem allows your APPLE to manipulate program and data files through simple BASIC statements. Command interpretation and file handling are controlled by software automatically loaded into RAM as the disk is initialized.

A BASIC statement such as PR#7 activates the Disk Subsystem. The CATALOG statement will then display a list of the files contained on a particular diskette. Other commands allow the user to Write-Protect a file, READ or WRITE it, and SAVE it back on the disk.

As data is stored on the subsystem, it is automatically put into unused sectors of the disk, which are linked together until a space of adequate size has been created to hold the new file. Thus the user gets the most efficient utilization of his disk area, yet does not have to know the maximum size of each file in advance.

Files stored on the disk can be copied, deleted, or renamed under program control. Volume numbers assigned to individual files or to diskettes allow the handling of successive files of the same name. And the CHAIN command permits the chaining together of multiple BASIC programs.

The Disk II Operating System fully supports both ROM Applesoft and Apple Integer BASIC through its universal command handler. All commands are completely explained in the manual supplied with Disk II.

PARAMETER	DESCRIPTION
Commands:	OPEN, CLOSE, READ, WRITE, LOAD, SAVE, EXEC, RUN, APPEND, LOCK, CHAIN, UNLOCK, DELETE, MONITOR, NOMONITOR, MAXFILES, IN#, PR#, INIT, BLOAD, BSAVE
Access Method:	Random or Sequential — arbitrary record length
Bootstrap Loader Method:	By means of Loader routine in two 256 x 8 PROMs, on-card
Disk Drive:	Shugart 5¼" floppy disk
Track Access Time:	Varies with number of tracks crossed. 200msec (avg.), 600msec (max. across 35 tracks)
Disk Speed and Latency:	300 rpm, 100 msec. avg. latency
Disk Capacity:	116K bytes (formatted), soft-sectored
Data Transfer Rate:	156K bits per second
Physical Dimensions:	Card—4.5" x 2.75" (not including connector fingers): fits inside the APPLE II Drive—6.1" x 8.75" x 3.8" (WDH)
Controller Capacity:	Up to two drives per controller. Multiple controllers can be used

Order Number: A2M0004. Supplied with:

- Floppy Disk Interface Card
- Bootstrap in ROM
- Disk Drive and Connecting Cable
- System Software on Diskette
- Manual
- Blank Diskette

Order Number: A2M0003. Supplied with:

- Second Disk Drive and Connecting Cable

COMPUTER GRAPHICS PRIMER

This book shows you how to create your own video graphics. It is geared to the user who wants to know the concepts and techniques for drawing pictures, making charts and graphs, animating shapes and objects, creating mandalas and dazzlers, and just about any application of the visual arts that you can imagine.

The APPLE II is used for the programming examples in this book. Video graphics on it is accomplished with simple instructions that are part of the BASIC language. Statements are used to control certain graphics commands, such as PLOT X,Y or COLOR= or HLIN. Because the graphics commands are simple, no prior programming experience is needed to use them. The book follows a simple format that introduces the major graphics instructions available on the computer, and then shows how they work and what they can be used for in a program. Numerous photographs are provided to help you visualize how the instruction operates.

The sections in the book include: what a graphics computer is; scanning; character generator ROM; color graphics; display density; language statements; product profiles; digitizing tables; drawing simple pictures; backgrounds; and animation.

MICROCOMPUTER WORKBOOK APPLE II EDITION

Written by Jim Poirot and Don Retzlaff. 136 Pages paperback. Designed to be used while you actually have your "hands on" the microcomputer. Courseware and software loaded into the computer parallels chapters in the workbook. Students do not need to have any programming background, the workbooks and courseware give students the capability of learning the BASIC programming language in a microcomputer assisted instructional mode. The workbooks are useful as reinforcement as students progress thru the programs. Questions are included to stimulate student interaction with the microcomputer and test the students progress through the programs. Questions are included to stimulate student interaction with the microcomputer and test the students understanding of the BASIC programming language. Also, questions of a "what if" content are included to generate student interaction.

Magazines, Newsletters, & Publications

The **APPLE** user needs and depends upon a great deal of printed information to support his time with the computer. He needs programming tips, information on new programs, and "how to" articles. To supply him with a never ending stream of articles, many publications are being written to serve these needs. They range from the slick advertising laden magazines all the way to the xeroxed basement produced newsletter. Don't overlook the newsletters however, because they can contain information just as interesting and useful as the big magazines. You may not get the information on smooth enamel paper, and the issues may not come out on a regular schedule, but nevertheless, they are sources of information that should not be taken lightly.

THE APPLE II FOR THE ARAB WORLD

- Features:**
- Dual English—Arabic Monitor
 - Dual English—Arabic Character Generator
 - English—Arabic Text Selection
 - Double Set of Applesoft Firmware
 - Bi-Lingual English—Arabic Keyboard
 - English—Arabic Commands

Bi-Lingual Application Programs Available

The ARAPPLE microcomputer is the Arabic development of the Apple II. It has two additional elements:

- The Arabsoft firmware card (which is found in slot # 0 of the system), the Arabic monitor, the Arabic BASIC interpreter and a red switch on the rear side of the computer for the selection of the Arabic mode (up position) or English mode (down position).
- The Arabic character generator which is found on the Apple motherboard.

Arabsoft BASIC is the Arabic, floating point BASIC interpreter that works with the ARAPPLE computer. The difference between Arabsoft and Applesoft BASIC is as follows:

- All the operating commands (LOAD, RUN, TRACE, NOTRACE, CONT) are translated into Arabic.
- All the error messages (e.g. SYNTAX ERROR, NEXT WITHOUT FOR, BAD SUBSCRIPT, . . .) are translated into Arabic.
- Numbers are input right to left. For example, 351 is entered by typing 1, following by 5, followed by 3.
- All the other Applesoft BASIC commands are kept the same.

In other words, if you would like to write Arabic programs, you have to write them in English Applesoft first, and then completely run and/or debug them in Arabic.

The ARAPPLE microcomputer has two modes of operation, the English mode and the Arabic mode.

Your system operates in the **English** mode if the red switch of the Arabsoft card is in the "down" position. Now the cursor appears on the left side of the screen and moves to the right whenever you type any character, which will be displayed as an English character.

Your system operates in the **Arabic** mode if the red switch is in the "up" position. Now the cursor appears on the right side of the screen and moves to the left whenever you type any character which, in turn, will be displayed as an Arabic character.

To switch from one mode to the other, press RESET, flip the red switch and press RESET once more.

Note: In the Arabic language, some letters take different shapes depending on their position in the word. ARAPPLE takes care of that. There is only one key for each letter and the computer will figure out the proper shape.

To program ARAPPLE, your system has to be in the English mode, Applesoft BASIC, first. Write all your programs in English, the same way you write Applesoft BASIC programs. If you would like to display any Arabic message (e.g. in PRINT or INPUT statements), you have to press the corresponding keys (as found on the bilingual ARAPPLE keyboard).

To run your finished program in Arabic, press the RESET key, flip the red switch into the "up" position (Arabic mode), press RESET, (CONTROL) C, RETURN and type % T I and RETURN to run the program.

Time Sharing Systems

THE SOURCE

An information utility accessed from your Apple using a modem and a local telephone number. Non-prime time (after 6:00 p.m.) rates are currently \$2.75 per hour, and allow you to access a multitude of subjects and information, including UPI needs.

Other subjects include:

ADVANCED APPLICATIONS AND PROGRAMS

Reference manuals and programming guides • calculator mode • file structures, editing and sorting • programming in extended BASIC, FORTRAN, COBOL, RPG, Assembly • program debugger • system commands • microprocessor cross-compilers.

BUSINESS AND FINANCE

Accounts payable • accounts receivable • general ledger • payroll • special applications • American Stock Exchange bond prices • Federal land bank bond prices • New York Stock Exchange bond prices • Treasury bills • World Bank bond prices • Commodity prices and futures • earnings reports • financial commentary • financial news and headlines • foreign exchange rates • gold, silver, platinum prices • stock market averages, closing statistics, news, quotations, summaries • Treasury bill auction reports.

DAILY NEWS AND FEATURES

UPI General wire service • Washington hotline • international and domestic news • business and financial news • sports news • UPI syndicated features • daily news summary.

TRAVEL CLUB

Electronic reservation and confirmation service • airport pick-up of tickets • automatic billing to credit card • airline schedule review • motel/hotel and rental car reservations.

SCIENCE AND ENGINEERING

Electrical engineering • general mathematics • mechanical engineering • computer simulations • statistics.

STARCAST

Biorhythms, past, present, or future • daily horoscope.

MONEY-SAVER BUYING SERVICE

20%-40% savings on major appliances, televisions, stereo and hi-fi equipment, VTR's, cameras, furniture and carpeting, watches, crystal, calculators, tires, and power tools • instant ordering • home delivery • automatically charged to your credit card • nation-wide search for lowest price on selected items.

NATIONAL REAL ESTATE LOCATOR SERVICES

NEW YORK TIMES CONSUMER DATA BASE

MAIL CALL—The TCA Electronic Mail System

Sending and receiving messages to other SOURCE users • toll-free voice access anywhere in the U.S. • Datapost hard-copy letter delivery anywhere in the U.S.

HOME ENTERTAINMENT

Computer game library • wine tasting information • wine market report • gourmet meal recipes • special diet recipes • syndicated features on home entertainment, chess club • backgammon • bridge.

MICRONET

Compuserve, a Columbus, Ohio computer service organization which services more than 650 commercial customers, including government agencies, financial institutions, and large corporations, has recently expanded its services to encompass the personal computer set. MicroNET is a computer timesharing and software distribution service for home and small business applications. The service costs \$5 per connect hour. The MicroNET system may be accessed via telephone service in 25 major metropolitan areas. It is available between the hours of 6:00 p.m. and 5:00 a.m. on weekdays, as well as all day Saturday, Sunday, and holidays.

According to the company, the personal computer owner will be able to use a variety of computer programs on a timesharing basis; communicate with other MicroNET customers; buy and sell software through the network; and obtain additional on-line storage. The MicroNET timesharing library includes a large selection of programs, educational aids, business applications, game and simulations, programming languages, and programming and diagnostic tools. Most of the programs in the MicroNET library are available at no charge other than the basic connect time rate.

All connect time charges and software purchases will be billed through use of credit card information which is provided by the customer.

APPLE User Groups & Clubs

APPLE CLUBS AND USER GROUPS

The following organizations vary from just a few people trying to get a group going, all the way up to the well established clubs that have hundreds of members and an active schedule. In most cases, we have provided the name of a contact person. We do not show meeting schedules or locations, as they change frequently. Write the groups and ask for further information. And last but not least, this list is very perishable, so a group may not be there when you try to find it. Corrections and additions are welcome for the next edition—address them to **User Group Update, WIDL Video**, 5245 West Diversey, Chicago, Illinois 60639
