# Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

## The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

### VERSARECEIVABLES™

\$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

### VERSAPAYABLES™

\$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

### VERSAPAYROLL™

\$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

### VERSAINVENTORY™

\$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

### VERSALEDGER II™

\$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

### SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.

To Order:

**Write or call Toll-free (800) 431-2818**

# Meet Tom, Dick and Jeri. Before they had SAVVY® they were just like you.

Introducing three new integrated personal computer language/database systems that recognize ... to err is human and to forgive is SAVVY.

SAVVY is the most "forgiving" software ever developed for your Apple IIe®, II Plus®, or Apple-compatible computer. It's a database system, natural programming language, file manager and operating system all in one. And because SAVVY can recognize your personal word patterns, you can misspell, mistype, abbreviate, or rephrase and still successfully command your computer.

SAVVY One™ is for single disk systems. It's ideal for use in the home or classroom by users new to personal computing.

SAVVY Pro™ for multiple or hard disk systems can be used by experienced software program developers to create integrated applications.

Business SAVVY provides easy-to-use application programs, such as accounts payable, accounts receivable, general ledger, payroll, inventory and document writer. It's also for use with multiple or hard disk systems.

Call 800-551-5199 to arrange for a free demonstration of SAVVY One, SAVVY Pro or Business SAVVY at your local computer store. In New Mexico, call 505-242-3333. Or for more information circle and return the reader service card.

SAVVY is a product of Excalibur Technologies Corporation, 800 Rio Grande Boulevard N.W., Mercado 21, Albuquerque, New Mexico 87104.

# Start A Tradition With Advanced Ideas™

Bring the whole family together with programs that are educational, flexible, extendable and *fun*. As the years go by you'll be glad you did.

Families like yours know programs aren't all the same. And that a computer is only as good as the software that runs on it.

So go ahead. Demand programs flexible enough to fit your children's abilities as they grow. Insist on features that extend subject matter as far as you want to take it. And be unimpressed if the whole thing isn't great fun. Then watch as your family keeps coming back to Advanced Ideas. You'll discover that you've really started something.

## How to Choose Software for Your Home

"As an educator with over a decade of experience using computers with children, I've found there are key features in a well-designed learning game. One is *extendability*.

Look for enough variety to hold your child's attention over time. Some games are appealing in the short run, but are quickly mastered. Supplementary materials such as disks of added lessons can continue your child's interest and enjoyment.

The ability to modify a program is another form of extendability. Authoring systems can let you create lessons on your own topic areas for any age level and allow children to create and save original work, giving a sense of completion and pride vital to learning."

## Software of Choice

Advanced Ideas (formerly Computer-Advanced Ideas) leads the industry with programs designed for extendability through easy-to-use authoring systems and a unique library of LearningWare™ diskettes. Rich game play and sound educational design have won Advanced Ideas programs the approval of the National Education Association.

Ask to see a demonstration at your local computer store.

Then make Advanced Ideas a tradition in your home.

**Advanced Ideas™**

# flashcard™

disk emulator for Apple® computers

## Packaged with business software for lightning fast processing.

Or, *flashcard* is packaged alone with drive diskettes for DOS 3.3, CP/M® and Pascal for software compatibility with popular programs such as Word Star® and dBase II®.

**Bonus Offer:** For a tidy turnkey solution to boosting business output, *flashcard* also comes packaged with MagiCalc® spreadsheet software from Artsci. MagiCalc is a superior, state of the art program that is fast, friendly and filled with features. And it is fully compatible with VisiCalc files.

**Why *flashcard*?:** Plug *flashcard* into your Apple and enjoy fast, smooth, no-wait computing. No more "disk wait" messages. No mechanical delays. No more noise as the disk chatters and clatters through a file search. And no wear and tear on your program diskettes. Instead, *flashcard* displays your data the instant you ask for it.

Your computer store should have *flashcard* in stock. If not, ask him to order one for you.

***flashcard* with MagiCalc \$595**  
***flashcard*, 144k disk \$349**

# Apple's® new baby has

Microsoft BASIC®  
on Apple's new Macintosh

It's called Macintosh™. And it has our brains and a lot of our personality.

We're called Microsoft®. And our part of Macintosh is five new programs that are bright, intuitive, outgoing, understanding and born to perform.

## Our pride, your joy.

Taking advantage of Macintosh's mouse and rich graphics, we've designed software that works like you, even thinks like you.

All our programs share the same plain English commands. So what once took days to learn, now takes hours or minutes to learn with Macintosh.

Microsoft Multiplan

Microsoft Chart

## Meet the family.

Our financial whiz is MULTIPLAN®, an electronic spreadsheet that actually remembers how you work. Even offers suggestions on spreadsheet set-up.

When it comes to writing, nothing travels faster

CIRCLE 320 ON READER SERVICE CARD

# our best features.

than our WORD. Using the mouse, it lets you select commands faster than you can say "cheese."

Our most artistic child is CHART. It gives you 40 presentation-quality chart and graphic styles to choose from.

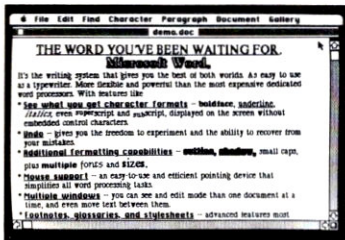

FILE is our most manageable child, an advanced personal record management program. **MICROSOFT**  
The High Performance Software

And BASIC, the language spoken by nine out of ten microcomputers worldwide, is the granddaddy of them all. Now enhanced to take advantage of the

Macintosh mouse, windows and graphics.

We'll be adding more to the family soon. So call 800-426-9400 (in

Washington State call 206-828-8088) for the name of your nearest Microsoft dealer.

## EDITORIAL A MESSAGE FROM MAGGIE

Now that we have settled down into regular publication of *A+*, we want to get you more involved in the magazine. The solution? We've decided to sponsor a contest that will test your mettle. Unlike the innumerable contests, sweepstakes, and lotteries that you have undoubtedly encountered—and maybe even entered—that are based on random luck, our contest will require skills to win. To challenge your programming abilities, we are proud to announce in this issue the *A+* Program of the Month contest.

The Program of the Month contest rules are simple: Anyone (other than Ziff-Davis employees) may submit an original, unpublished program for any Apple computer—Apple II, II Plus, or

IIe; Apple III; the Lisa; or the Macintosh. The program should consist of 500 lines or less and must include a one-page description of what the program's function is and how it works. The program can involve any aspect of computing. Please submit the program and the description on a diskette. You can write it in any language, for any operating system, just as long as it runs on an Apple computer. Be sure that your name, address, and phone number are on a label on the outside of the diskette and that you include them on your file as well.

We will return programs that do not win to the author after two months. You may enter the contest as often as you like. Each month the editors of *A+*

will consider all submissions and determine the winner. We'll base our decisions entirely on our subjective opinion of which program is the best.

The winner will receive a \$500 prize, the winning program will be published in *A+* magazine, and we will consider the program for publication in *A+Disk* magazine. And that's not all: Every twelve months, we will pick a grand-prize winner, who will receive an additional \$1000 prize, along with an *A+* statue of excellence. If the contest generates enough interest, we plan to make arrangements with The Source or CompuServe to run the program, so you will be able to download the winning programs to your computer.

Submit your entries to *A+* Program of the Month Contest, *A+* Magazine, 11 Davis Drive, Belmont, CA 94002, Attn: Fred Davis.

In addition to the Program of the Month contest, we are initiating an annual awards program for the best hardware and software products for Apple computers. We want your help in determining the winners from among those companies whose products appear in advertisements and/or articles in *A+*. To gather your "votes" for which companies should receive an award of excellence, we will run a questionnaire. We'll weigh your opinions as well as ours in deciding which products we will honor. The questionnaire will include many categories, ranging from accounting software to utilities to printers and even mice.

We will announce the winners annually in our February issue (the issue that hits the stands in January). Each winning company will receive an *A+* statue of excellence, and the issue will include an in-depth article on the people behind the products that you and we have deemed the best of the year. ✚

*Maggie Cannon*

## ▶ CASH COW NOT COVERING

While new machines spring forth full-blown from Apple computer's head offices, the company hasn't neglected the machine that's been its financial mainstay: the Apple IIe. Evidence of Apple's continuing commitment to the Apple IIe has appeared in the form of a new mouse package that is called AppleMouse II.

The AppleMouse II brings some of the technological breakthroughs from Apple's higher-powered machines down to the Apple IIe level.

Included in the AppleMouse II bundle is a single-button mouse (like the Lisa's), a graphics software

package called MousePaint (like the Macintosh's), and a tutorial program.

MousePaint's software simulates bit-mapped graphics, prints in a variety of character fonts, and permits its users the luxury of freehand drawing and erasing.

Via the mouse, Apple II users also are able to move and copy text by calling pop-up menus, as well as insert text in drawings or position drawings within the text of reports and presentations.

The MousePaint software was developed with the new ProDOS operating system, slated to become standard on the Apple IIe this year.

Other companies haven't given up on the Apple IIe ei-

ther. Hayden Software, Western Design Center, and GTE Microcircuits have joined forces and announced the production of the 65816 16-bit microprocessor for the IIe, along with compatible software-development tools.

The 65816 chip is completely hardware- and software-compatible with the 6502 8-bit microprocessor heart of the Apple IIe. Western Design Center developed the chip, and GTE Microcircuits will manufacture it. Meanwhile, the software-development tools from Hayden have been designed to extend the capabilities of ProDOS.

Obviously, the Apple IIe is a long way from being milked dry.

## ▶ FLOOBY IS AS FLOOBY DUST

Move over, Pet Rocks! The latest gift gimmick for frustrated computer users is a potion called Flooby Dust which guarantees that it will cure everything from hardware glitches to Twonk's Disease.

Sprinkle this translucent, nay, transparent powder over a shorted-out memory board, a bug-infested program, even a sluggish computer operator, and the manufacturer, Wallace Micro-Marts of Peoria, Illinois, claims you will find the performance of the errant item miraculously improves.

"Inventor" Ron Wallace claims that his miracle product will also "mend broken hearts, patch dissolving marriages, repair tots' tricycles, and solve the balance-of-payment problems in Latin American countries."

There is absolutely no possibility of an overdose. Flooby Dust is an invisible, tasteless, odorless grit so

light that the user might swear the bottle contained nothing at all. Packaged to look like a headache tablet (with "antistrainophen"), Flooby Dust can be found at the patent-medicine counter of your local computer dealer.

### ▶ A III BY ANY OTHER NAME

Yes, the Macintosh is out at last. But don't forget to check out the new and improved version of the Apple III—conveniently named the Apple III Plus.

You might not have read much about the Apple III lately, since the FCC put its foot down last year and demanded that Apple redesign the machine to conform to radio-frequency-interference standards. But the re-named Apple III Plus has come back bearing its RFI shields, not on them.

Apple has added some enhancements to sweeten the new design, along with the four-layer motherboard that now meets the FCC's standards for electronic "noise."

The Apple III Plus offers a clock/calendar function, a new keyboard modeled on the Apple IIe, a hefty 55-watt power supply (the Apple III operated on 35 watts), and a graphics "Interlace mode" that scans both on the lines and between them, giving the pictures and text a sharper, thicker line.

Apple III owners can purchase some of these features, such as the clock/calendar function for \$35, and the Interlace mode for \$75.

### ▶ DIAL-A-WOZ

Who says business people have no sense of humor? Even the mastermind of a Fortune 500 corporation deserves a few giggles.

If you want proof, call (408) 438-5555. The number may have changed by now, but recently a caller heard a barely intelligible recording of a man with a thick Slavic accent telling bad Polish jokes. The mystery man's identity? You guessed it: Apple Computer's cofounder, Steven Wozniak.

### ▶ VICTORY OF THE MICRO-FLOPPY?

Now that the Macintosh has finally invaded computer stores, one potential piece of fallout could be a new de-facto disk standard: the 3½-inch micro-floppy.

The 3½-inch micro-floppy disk, first offered by Sony and also manufactured by Hewlett-Packard, Shugart, Tandon, and Mitsubishi, among others, is the system of choice for the Macintosh and the Lisa II.

Only time will tell if sales of this 32-bit family will return Apple Computer's titanic investment in the micro-floppy. Industry analysts have been predicting that the 3½-inch hard-jacket disk will take the lead in the 1980s.

A report from Creative Strategies International in San Jose, California, entitled "Mass Storage Media Technology, Evolution and Opportunities," says that the 3½-inch version will soon

account for 50% to 60% of the U.S. market.

And, said Walker Mannes, industry analyst for CSI, that report was written long before the Macintosh's entry into the market. (It was also written before IBM announced that it would not use the 3.9-inch micro-floppy for the PCjr.)

Which sub-4-inch format will win is unclear. Four different standards for the micro-floppy have been proposed by the American National Standards Institute's X3B8 technical subcommittee. But with Apple throwing its considerable weight behind the Sony version of the 3½-incher, its chances are good for becoming the data-storage-configuration favorite for personal and portable computers in the 80s.

### ▶ HEARD ANY COMPUTER GOSSIP LATELY?

Are you doing interesting things with your Apple computer? Do you know someone else who's doing unusual Apple-related work? Have you heard any hot gossip about the computer world lately?

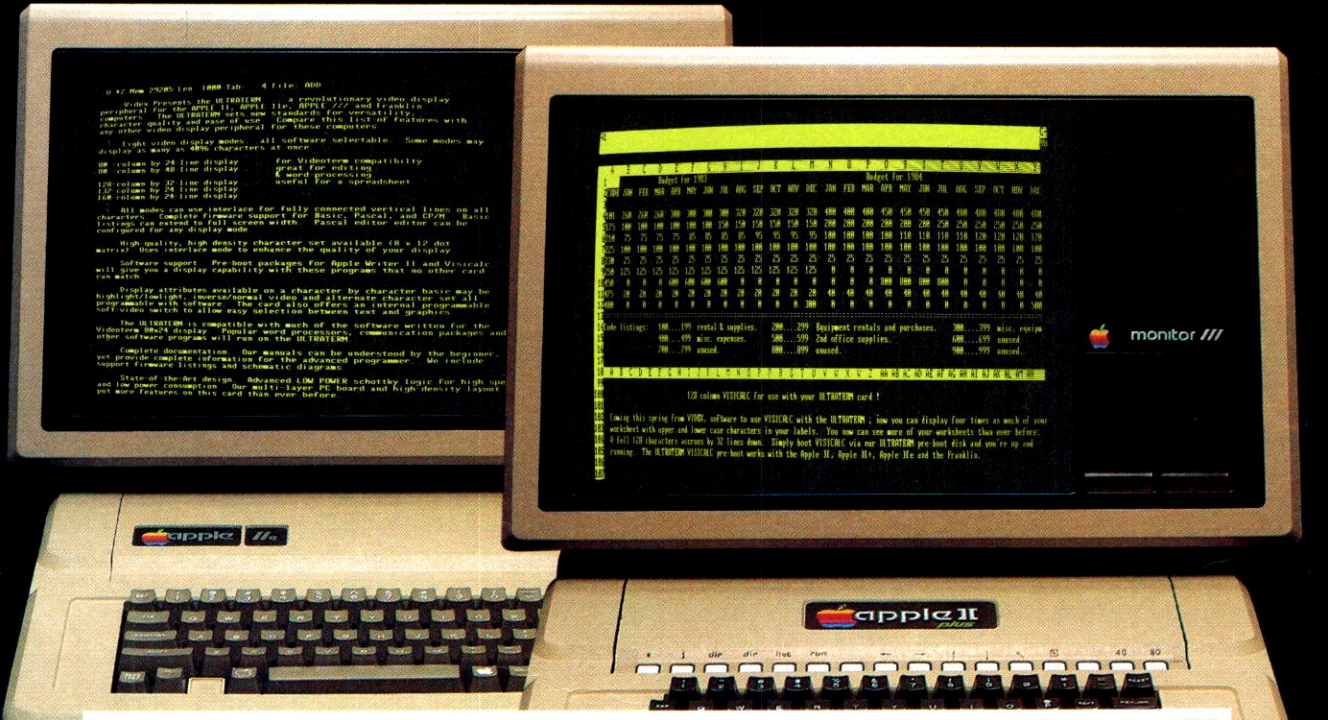

Come whisper it in our ear—we won't tell anyone, honest. (Anonymity will be preserved upon request.)

A+ pays \$50 for items used in the Dispatches section.

Send your leads or short articles (typewritten, double-spaced, please!) to Dispatches, c/o A+ Magazine, 11 Davis Drive, Belmont, CA 94002. All submissions are subject to editing and become the property of A+.

# INTRODUCING ULTRATERM™

## YOU'LL LOVE THE VIEW!

With UltraTerm, the revolutionary new card from Videx, you'll enjoy sweeping panoramas of spreadsheets that you've never seen before: 128 columns by 32 lines, 132 columns by 24 lines and even 160 columns by 24 lines. You'll revel in the scenics of a whole year of records stretching out across your screen.

You'll also delight in the new horizon of 80 columns by 48 lines—double the lines you normally have. So your word processing will reveal a "depth of character" never possible before!

Another breath-taking view of UltraTerm—it delivers absolutely flicker-free, state of the art display, with 8x12 character matrix giving you preposterously clear, readable characters. Not only will you see more characters on your screen (a whopping 4096 possible), but they'll also be larger and more readable than the characters you read every day in

Photo of actual-size characters on Apple Monitor III.

your newspaper! And you can differentiate those characters in several modes: normal (white on black), inverse (black on white), bright intensity and dim intensity.

**UltraTerm. Come on over and enjoy the view.**  
Suggested retail price: \$379

1105 NE Circle Blvd. Corvallis, Oregon 97330  
(503) 758-0521

UltraTerm features a built-in soft video switch and has complete firmware support for BASIC, Pascal and CP/M®. Use it with the Apple® II, Apple IIe

**THOUGHTWARE/BY STEVE ROSENTHAL**  
A modem can be your ticket to  
the world of data communications.

# DIALING FOR DATA

If you add a modem to your Apple, your personal-computer system will become a gateway to a rapidly expanding world of computer networks. Some of these networks are small, local, and free; others are national or international and can be costly. All of them exist because many people want to have their computer communicate with other machines.

For almost all of us, computer networking means connecting computers through the telephone system. You can also connect Apples with local-area networks, though, and some nontelephone data-communications networks involve large computers. For sharing data within an organization and getting by without multiple printers, local networks can serve well in many small and large businesses.

Neither local-area nor large-computer networks are a substitute for the greater reach of the telephone network. The telephone system is already in place, technically well defined, relative-

**Sending data across the country by phone is often easier than sending it directly across a room.**

ly inexpensive, and almost universal—virtually everyone who has a computer has a telephone.

The basic phone system was, of course, originally designed only for car-

rying voices and not computer data, so some technological sleight of hand is necessary to get computer messages through the lines. By now, most of the problems have been solved, though, and sending data across the country by phone is often easier than sending it directly across a room.

The most popular reasons for connecting an Apple to the outside world are for fun or curiosity. With an Apple and a modem, you can call up a few hundred bulletin-board systems and exchange informal messages with other people. You can also use a commercial network, such as The Source or CompuServe, for services intended for your enjoyment.

You can also send messages for business use. With an Apple and a modem, you can exchange data either directly

## TURN DOT MATRIX INTO A DAISY . . .

Brand new! Now I can turn GEMINI as well as EPSON printers into a daisy!

with the **NicePrint Card**  
(formerly SUPER-MX Card)  
for the **Apple II, II+, or IIe**.

The standard of printing excellence is the daisy-wheel printer. The **NicePrint** interface card improves EPSON or GEMINI printers so they have just about the same quality print as the daisy-wheels! And this high quality is easily available to all Apple software, even copy-protected diskettes.

Here is a sample of dot matrix printing. **Change it into a daisy with NicePrint!**

Four optional font styles are available in addition to the standard Roman font shown above that simply plug into the card:

**LETTER GOTHIC** is modern looking.

**ORATOR** is easy to read and good for speeches.

**SCRIPT** adds the personal touch.

**CODE ENGLISH** is very formal and elegant.

### **BETTER THAN GRAPPLER!**

The **NicePrint** card has all the Apple Hi-Res graphic dump commands that the Grappler has including: double dumps (both pages side by side), dump from page 1 or 2, double size, emphasized, rotated, strip chart recorder mode, and text screen dump.

### **Spies Laboratories**

(pronounced "speez")

CIRCLE 238 ON READER SERVICE CARD

with another personal computer or through a network or switching system. Electronic mail is faster than the service the best messenger companies can provide. With the right hardware and software, you can even have your Apple send financial or operational information automatically to a central computer any night after you've gone to bed.

You can also use your Apple and a modem to substitute for connection to the existing public written-message system—the telex and TWX networks. By subscribing to a service that collects your incoming mail or by adding a special modem that receives and stores messages, you can use an Apple to receive written orders and queries from customers, suppliers, or branch offices. Most commercial electronic-mail services also allow you to send outgoing telex and TWX messages through their networks—and the international telex network goes to almost every country on the globe.

Instead of sending messages, you can collect data. Hundreds of commercial information services, a half dozen of which were designed specifically for personal-computer users, are accessible by telephone. If you need information on anything from agriculture to zoology, somebody probably has indexed it all and is offering it for sale.

If you have data on your Apple and you need to use it on another brand of computer (or the other way around), the easiest way to transmit the information is often by telephone. Even if the computers are sitting side by side in the same room, exchanging data by telephone lets you bypass restrictions of disk size and format, connector styles, special cables, and special software.

To have your computer communicate over the telephone system, the essential piece of hardware is a modem, a printed circuit board or box that translates computer signals back and forth into the form the telephone network can accept.

Modems come in many varieties, but you don't need to know any technical details to use one. All the well-known brands and most less-familiar ones do the basic communications job well. If you're buying a modem, you should select one based on special features you want, compatibility with your system, product support, and price.

Most people who don't know much about hardware need help to connect and configure a modem, so the extent of your knowledge and the availability of

someone to help you may determine what you select and where you buy it. Hooking up a modem involves lots of small details, and not everyone has both the knowledge and the patience for the job, so be prepared to spend some time or select your assistant carefully.

The two common modem types Apples use are the 103 and the 212, or 212A, both of which are named after the Western Electric models that have become the de facto industry standards. Type 103 modems transmit at speeds up to 300 baud (30 characters per second).

Type 212A's send data four times as quickly, at 1200 baud (120 characters per second), but they're significantly more expensive. Most include a built-in Type 103 modem, so you can also use them to communicate with systems that have only the slower equipment.

Most people read a screen at a rate faster than 30 characters per second but slower than 120. Thus, 300 baud

▶ **Hooking up a modem involves lots of small details, and not everyone has both the knowledge and the patience for the job.**

seems painfully slow, but 1200 baud is quite comfortable. If you're paying for a long-distance phone call or for someone to sit at either or both ends of a data link, the savings of faster data exchange can add up quickly.

You can get modems as separate small boxes or as boards that plug into the slots on your Apple (see the chart on page 42 and "Modem Quartet" on page 36 for details on the more popular brands). You can use stand-alone models with any brand of computer, but internal ones require less space and fewer cables.

A bare-bones modem has only a telephone connection, a connection for the computer, and a power switch—if the modem is a plug-in board, it may lack the switch. Any modem you buy for your Apple is likely to have some other features, however.

On some modems, you choose various configurations by setting switches, but the trend is to equip the modem with its own microprocessor and let you

# See Jane™ run

Once there was a  time,

before the written word, when  people used  pictures to communicate. Symbols representing entire  ideas were easy to  see and understand. And the people were comfortable with this language. And they were  happy.

But then came the  computer.

And symbols were replaced by complicated commands. Soon data processing meant learning a whole new vocabulary. And the  people became frightened of the new computer language. And they were  sad.

Then came Jane.

Absolutely, positively, unequivocally, unquestionably, the most simple way to operate a  computer.

Jane does away with the keyboard . Instead, a simple, hand-held device called a  mouse selects from a variety of applications. From letters to lists, to calculations and spreadsheets. Jane does them all.

Jane does away with complex command words.

Instead, simple, easy-to-understand  pictures tell the computer what to do.

From one operation to many, all on one screen at the same time.

Best of all, Jane doesn't cost lots of  money. Now everyone can use a home computer. Jane gives back to the people a language they understand.

And they  Jane. You can too.

One word is worth a thousand pictures.

## Jane

Jane comes complete with Janewrite™, Janecalc™, Janelist™, and of course, a mouse.

Jane is now available for the Apple II, II+ [64K], //e, Commodore 64. Available soon for the new Atari™ series and the IBM PC™ and compatibles. Apple™, Commodore™, IBM™ and Atari™ are all registered trademarks.

# Now a professional CAD

# system for \$1,095!

## For Apple II and //e

Finally, there is a breakthrough in computer aided drafting and design that makes this work-saving technology affordable for every school, architect, engineer, designer and draftsman.

The new Robographics CAD-1 system works with a standard off-the-shelf Apple\* II+ or //e computer. A complete CAD-1 hardware and software package sells for \$1,095, and you can add a drafting plotter for as little as \$1,495!

Yet, this is a serious drafting and design system emulating other CAD installations costing over \$15,000.

CAD-1 utilizes a unique handheld controller which serves as both drawing instrument and function selector . . . there are no key-

stroke commands to interrupt the workflow. And, when the drawing is completed, line work of reproduction quality can be plotted on paper, vellum or drafting film.

The easy-to-learn CAD-1 drafting process is fast, efficient and highly productive.

To preview this remarkable system, send for a free CAD-1 brochure, or send \$17 for your advance copy of the CAD-1 User Manual. Credit will be given when you order a system.

Major credit cards accepted.

See your Apple dealer today for a demonstration or contact us directly.

set it with commands you send directly from the computer. Such a modem is called an "intelligent" modem.

Modems use different tone patterns to send and receive data, and to communicate, any two must use mating tone pairs. If you want your Apple to communicate with another personal computer, at least one end needs a modem that can switch between the Originate and the Answer mode. The more restricted "originate only" models will suffice if you're only going to call up bulletin boards, commercial networks, or systems that can change modes.

If you want your computer to be able to answer the phone when you're not there, you need "auto-answer" capability. "Auto-dial" lets the modem dial numbers instead of requiring you to dial on a telephone set—with the right software, you can use this type of modem to let your Apple make calls at night when phone rates are lowest.

Just like telephones, modems now come with memory banks for frequently called numbers and circuits to detect and wait for sequences of dial tones. If you expect to spend a lot of time using your modem, these features could be worth the added price, and you might want to get a telephone line just for your computer. You don't need a special high-grade computer line for the Type 103 and 212A modems, but you may not want to have to compete with your machine for access to the outside world. You should definitely get a separate line if you want your modem to answer the phone—it confuses the modem and annoys callers when they try to talk and get the modem's whistle tone in response.

### Data Communications Software

The minimum data-communication software takes an expert about ten minutes to write and occupies less than a page in the Apple's memory. There's rarely any point in having your Apple carry on an exchange as if it were a \$595 video terminal without any processing ability or storage, though. Just as with other hardware that you can hook up to an Apple, a modem without good software becomes a chore to use.

Any modem software should at least allow you to send files that you have prepared beforehand and put data that you receive onto your Apple's disks for storage. You'll want to be able to prepare files ahead of time because you'll often pay by the minute to use electronic mail, database, or long-distance services. Also, you want your Apple to copy and store information, rather than

make you struggle to write down what you see on the screen quickly and accurately by hand.

Some Apple modem-software packages include their own text editors, but with most you prepare any long text files with your favorite text editor before calling up the modem program. Almost all modem programs can capture data, but some temporarily store the data in memory, so you have to get the data written to the disk before going on to some other activity.

If you're going to use your Apple to exchange files with another computer, you may need special software that matches the way the other system com-

► **The bane of communications systems is the lack of universal standards.**

municates. Most widely advertised software packages support communication with commercial networks, and some have built-in settings for the idiosyncrasies of the most popular services. If you're not good at configuring programs or not interested in dealing with the details, software with built-in settings may be for you.

Modem software tends to be limited in its hardware compatibility, so make sure that any software you try to use matches your system. If you're buying modem software, you might ask the vendor to guarantee that it will work with your particular configuration.

**Standards and Protocols**

The bane of communications systems is the lack of universal standards and protocols. Most data-communications standards are amalgams of formal definitions, historical practice, and vendor preference. Some areas of general agreement exist, but chaos prevails in others.

Any modem that you buy for your Apple should either fit in one of the slots or have an RS-232, "serial," interface, which enables you to connect it at the Apple end. If you get a stand-alone model, remember that you'll need a serial card as well—any serial card should work, once you figure out how to configure it.

For at least the next few years, you should choose a modem that is compatible with the two types now in wide use. If you do so, you'll be able to com-

# WHEN IT COMES TO THE TWO BEST WORD PROCESSORS

**WordStar®  
MailMerge®  
\$645.00**

**NewWord™  
MergePrint  
\$249.00**

## IT'S A QUESTION OF WEIGHING THE DIFFERENCES

There's only one main difference: price.\* Because NewWord, with its built-in Merge Print, is keystroke, command and file compatible with MicroPro's WordStar®/MailMerge®.

NewWord also offers advanced design features like Unerase deleted text, automatically changing ruler lines, multiple line Headers and Footers, and on-screen display of boldfacing and underlining. NewWord is demonstrably superior on your dot matrix printer, supporting microjustification and variable line heights/character widths.

Make a comparison. NewWord is lighter only on your checkbook.

# Apple Peripherals Are All We Make

## That's Why We're So Good At It!

### THE NEW TIMEMASTER II

Automatically date stamps files with PRO-DOS

NEW 1984 DESIGN  
An official PRO-DOS Clock

- Just plug it in and your programs can read the year, month, date, day, and time to 1 millisecond! The only clock with both year and ms.
- NiCad battery keeps the TIMEMASTER II running for over ten years.
- Full emulation of ALL other clocks. Yes, we emulate Brand A, Brand T, Brand P, Brand C, Brand S and Brand M too. It's easy for the TIMEMASTER to emulate other clocks, we just drop off features. That's why we can emulate others, but others CAN'T emulate us.
- The TIMEMASTER II will automatically emulate the correct clock card for the software you're using. You can also give the TIMEMASTER II a simple command to tell it which clock to emulate (but you'll like the Timemaster mode better). This is great for writing programs for those poor unfortunates that bought some other clock card.
- Basic, Machine Code, CP/M and Pascal software on 2 disks!
- Eight software controlled interrupts so you can execute two programs at the same time (many examples are included).
- On-board timer lets you time any interval up to 48 days long down to the nearest millisecond.

The TIMEMASTER II includes 2 disks with some really fantastic time oriented programs (over 40) including appointment book so you'll never forget to do anything again. Enter your appointments up to a year in advance then forget them. Plus DOS dater so it will automatically add the date when disk files are created or modified. The disk is over a \$200.00 value alone—we give the software others sell. All software packages for business, data base management and communications are made to read the TIMEMASTER II. If you want the most powerful and the easiest to use clock for your Apple, you want a TIMEMASTER II.

**PRICE \$129.00**

### Super Music Synthesizer Improved Hardware and Software

- Complete 16 voice music synthesizer on one card. Just plug it into your Apple, connect the audio cable (supplied) to your stereo, boot the disk supplied and you are ready to input and play songs.
- It's easy to program music with our compose software. You will start right away at inputting your favorite songs. The Hi-Res screen shows what you have entered in standard sheet music format.
- Now with new improved software for the easiest and the fastest music input system available anywhere.
- We give you lots of software. In addition to Compose and Play programs, 2 disks are filled with over 30 songs ready to play.
- Easy to program in Basic to generate complex sound effects. Now your games can have explosions, phaser zaps, train whistles, death cries. You name it, this card can do it.
- Four white noise generators which are great for sound effects.
- Plays music in true stereo as well as true discrete quadraphonic.
- Full control of attack, volume, decay, sustain and release.
- Will play songs written for ALF synthesizer (ALF software will not take advantage of all our card's features. Their software sounds the same in our synthesizer.)
- Our card will play notes from 30HZ to beyond human hearing.
- Automatic shutoff on power-up or if reset is pushed.
- Many many more features.

**PRICE \$159.00**

### Z-80 PLUS!

- TOTALLY compatible with ALL CP/M software.
- The only Z-80 card with a special 2K "CP/M detector" chip.
- Fully compatible with microsoft disks (no pre-boot required).
- Specifically designed for high speed operation in the Apple IIe (runs just as fast in the II+ and Franklin).
- Runs WORD STAR, dBASE II, COBOL-80, FORTRAN-80, PEACHTREE and ALL other CP/M software with no pre-boot.
- A semi-custom I.C. and a low parts count allows the Z-80 Plus to fly thru CP/M programs at a very low power level. (We use the Z-80A at fast 4MHZ.)
- Does EVERYTHING the other Z-80 boards do, plus Z-80 interrupts.

Don't confuse the Z-80 Plus with crude copies of the microsoft card. The Z-80 Plus employs a much more sophisticated and reliable design. With the Z-80 Plus you can access the largest body of software in existence. Two computers in one and the advantages of both, all at an unbelievably low price.

**PRICE \$139.00**

### Viewmaster 80

There used to be about a dozen 80 column cards for the Apple, now there's only ONE.

- TOTALLY Videx Compatible.
- 80 characters by 24 lines, with a sharp 7x9 dot matrix.
- On-board 40/80 soft video switch with manual 40 column override
- Fully compatible with ALL Apple languages and software—there are NO exceptions.
- Low power consumption through the use of CMOS devices.
- All connections are made with standard video connectors.
- Both upper and lower case characters are standard.
- All new design (using a new Microprocessor based C.R.T. controller) for a beautiful razor sharp display.
- The VIEWMASTER incorporates all the features of all other 80 column cards, plus many new improvements.

	PRICE	BUILT IN SOFTSWITCH	SHIFT KEY SUPPORT	LOW POWER DESIGN	80 COLUMN MODE	7x9 DOT MATRIX	LIGHT PEN INPUTS	40 COLUMN OVERRIDE	INVERSE CHARACTERS

The VIEWMASTER 80 works with all 80 column applications including CP/M, Pascal, WordStar, Format II, Easywriter, Apple Writer II, VisiCalc, and all others. The VIEWMASTER 80 is THE MOST compatible 80 column card you can buy at ANY price!

**PRICE \$179.00**

- Expands your Apple IIe to 192K memory.
- Provides an 80 column text display.
- Compatible with all Apple IIe 80 column and extended 80 column card software (same physical size as Apple's 64K card).
- Can be used as a solid state disk drive to make your programs run up to 20 times FASTER (the 64K configuration will act as half a drive).
- Permits your IIe to use the new double high resolution graphics.
- Automatically expands Visicalc to 95 K storage in 80 columns! The 64K config. is all that's needed, 128K can take you even higher.
- PRO-DOS will use the MemoryMaster IIe as a high speed disk drive.

### MemoryMaster IIe 128K RAM Card

- Precision software disk emulation for Basic, Pascal and CP/M is available at a very low cost. NOT copy protected.
- Documentation included, we show you how to use all 192K.

If you already have Apple's 64K card, just order the MEMORYMASTER IIe with 64K and use the 64K from your old board to give you a full 128K. (The board is fully socketed so you simply plug in more chips.)

**MemoryMaster IIe with 128K \$249**  
**Upgradeable MemoryMaster IIe with 64K \$169**  
**Non-Upgradeable MemoryMaster IIe with 64K \$149**

Our boards are far superior to most of the consumer electronics made today. All I.C.'s are in high quality sockets with mil-spec. components used throughout. P.C. boards are glass-epoxy with gold contacts. Made in America to be the best in the world. All products work in the APPLE IIe, II+, II+ and Franklin. The MemoryMaster IIe is IIe only. Applied Engineering also manufactures a full line of data acquisition and control products for the Apple; A/D converters and digital I/O cards, etc. Please call for more information. All our products are fully tested with complete documentation and available for immediate delivery. All products are guaranteed with a no hassle **THREE YEAR WARRANTY.**

municate with public systems and systems that use other brands of equipment. If you have an application in which your Apple always communicates with the same computer, you can find faster modems, but they're not standardized and may cost more than your computer itself.

If you want to use your modem to exchange data, you should get software that supports some form of error checking. Although data transmission is generally reliable, if you're sending thousands of characters, even one error in several hundred characters could change a vital figure. If you're exchanging programs or nontextual data, even the loss of a single bit could radically change the way the received copy operates.

Most software companies that sell communications packages for Apple modems offer their own, proprietary error-checking protocol. Their operation is automatic (once you pick the Error Checking mode, the software checks each transmission for errors and re-sends any exchange that didn't arrive correctly), but they require the same brand of software at each end.

If you're running CP/M on the Apple or sending files to and receiving them from a CP/M system or an IBM Personal Computer, you might want to get software that is compatible with XMODEM, or MODEM7, error-checking methods—the popular public-domain (free) CP/M program called MODEM7 uses this method, and it's available for any CP/M or IBM PC-based system.

Apple Computer has joined with other firms in the personal-computer industry to endorse a communications method developed by Microcom Incorporated. This MNP standard has not shown up on Apple or Apple-compatible products yet, but it should be available soon. It will provide full error checking as well as a range of communications-control functions.

#### Start with a Bulletin Board

The best place to sample data communications with your Apple is probably with a local bulletin board. Even if you use your computer only for business and find the boards too lighthearted, they're a good way to get the feel of how things work, without running up charges on a commercial network.

Almost all bulletin boards work on the same general principles. You dial up their number with your modem and then give your name and some other identification. Many bulletin boards re-

## OPEN UP AN ACCOUNTING DEPARTMENT FOR \$395.00

**Why staff up? With the Desktop Accountant™, all the accounting help your office needs can be at your fingertips!**

No matter what type of business you're in, Desktop Accountant will let you manage the financial end of it more professionally than ever before.

#### A Complete System with Support.

Desktop Accountant includes accounts receivable, accounts payable, payroll and general ledger programs, along with comprehensive user manuals and training aids, including an audio cassette tape. And our telephone "hotline" means personalized support.

**Produces 42 Reports.** "Keeping the books" has never been so easy! Desktop Accountant prepares every bookkeeping/accounting report your growing business requires: from invoicing to statements to aged A/R listings; from cash distribution to A/P checks to vendor activity reports; from complete payroll checks and stubs to W-2 forms; from the chart of accounts to balance sheet and income statement, as well as many other vital to efficient management.

Desktop Accountant is available for nearly every portable, personal and desktop computer. The system requires either CP/M® or MS-DOS™ (PC-DOS), Microsoft BASIC™, 64K RAM, two disk drives or hard disk, and a 132-column printer (or an 8 1/2" x 11" printer with compressed print mode).

You won't find better quality software at such a low price. Just **\$395.00 for most CP/M® formats (\$495.00 for IBM® and some CP/M formats) complete.** Call for available formats.

**EARTHWARE**  
P R E S E N T S

Programming by Kevin Ryan

**Black Belt** is a challenging arcade game of the martial art, taekwondo. The Mockingboard sound and speech synthesizer, joystick and keyboard combine for both fun and learning. Championship sparring rules and the disk's practice section teach you the forms. Designed with input from professionals, **Black Belt** is a skill game in which brutality and rule infractions affect score.

The one-person game has a built-in artificial I.Q. rather than random generator. Instruction booklet included. Apple II computer, 48K, one disk drive, and joystick required. Mockingboard is optional, but adds exciting dimension. Suitable for ages 9-90.

**\$29.95.**

## STAR SEARCH

Pluto star base receives a signal from the direction of Epsilon Eridani (about 10 light years away). The players have their mission — find the origin of the signal. As captain, you must each choose a crew and supplies for your ship. Gather information by flying probes, with your automated telescopes, or by landing a pinance. You may find alien life forms!

Go into the asteroid belt to conserve fuel but be ready to dodge meteoroids or destroy them with your laser gun. Each game is different and can be saved for re-entry. Win by managing your resources well and making discoveries.

Request educational version on school letterhead. Requires Apple II, 48K.

**\$45.00**

quire you to be "validated" before you can access more than introductory functions.

Once you're connected, you generally get a menu of choices, two of which will be some form of a "scan" and a Read command. Scanning lets you look at the titles or subjects of messages posted on the board; reading shows you

▶ **The best place to sample data communications with your Apple is probably with a local bulletin board.**

the full text of the ones you select. You can normally post messages, as well as read them.

Most people who run bulletin boards do so as a personal hobby or as an adjunct to a computer-related business. Some schools and large noncomputer businesses also make their computers available for bulletin-board use during night and weekend hours. On some bulletin boards, you pay a fee to get a password, but most are free.

The advantage of learning the basics of data communications with a bulletin board is that most are imperturbable, patient, and available—and you can pick one that lets you remain anonymous, if you're shy. You can figure out how to use your hardware and software without keeping anyone else waiting or running up a big bill. As a courtesy, you probably should avoid tying up the more popular and busy boards while you're in the learning stage (the school- or company-sponsored ones are generally the most tame and least used).

To get started, try to find out about a board or two in your area. Most computer stores are aware of at least a few boards, and users' groups are also a good source of information on them. Some magazines also carry regular listings, and some modem manufacturers include a list that was current when they last revised their product's manual.

Once you start with a bulletin board, it will probably have a message area or a reserved area that lists the numbers of other boards. Some people, in fact, make a hobby of collecting as many numbers as they can.

After you know your way around the

bulletin boards, then decide if you to sign up for any of the comm services (see "Planning to Join Electronic-Mail Revolution?" page 26).

**Just over the Horizon**

In perhaps as few as a dozen years, many of the data-communications questions that we must contend with right now will seem like worries about styles of harnesses for carriages. The entire communications network is poised on the brink of an abrupt plunge into new technologies. Rather than trying to force digital data through a basically voice-oriented network, the new network will be primarily digital, and voice will be the foreign element that needs translation.

The concept is called the ISDN, or Integrated Services Digital Network. It will probably make use of some combination of direct connection via satellite, fiber-optical cables, microwave and free-space optical links, and computerized switching systems. Since the largest costs in a communications network are design, installation, and maintenance, rather than routine operations, higher channel capacities usually can lower cost per use, since the expenses go up more slowly than the capacity. Consequently, these new technologies should be able to reduce costs, make more services available in rural areas, and offer a greater mix of services.

In the immediate future, some communications carriers are already build-

▶ **The entire communications network is poised on the brink of an abrupt plunge into new technologies.**

ing "X.25" or "packet switching" systems, special networks designed to transmit computer data inexpensively by handling it as a succession of small chunks. In the next half dozen years, you may see these networks soliciting individual personal-computer users.

Until then, the data must get through. If you have an Apple and can afford a modem but haven't hooked yourself up, now may be the time. Even in the short term, most businesses will find data communications economically justifiable, and for personal or business use, the experience, knowledge, and perspective it provides may each be worth the cost. +

# Quality you expect, at a price you don't.

## BECK DOUBLE DENSITY DISKETTES

SINGLE SIDED **\$2.19** / **\$2.79** DOUBLE SIDED  
ea. / ea.

Our message to you is simple. If you like the quality of Dysan, Verbatim, 3M, et al, you'll like the quality of Beck soft sector, 5 1/4" flexible diskettes. The only major difference is cost. We're less expensive. In fact, a lot less expensive.

### Why does Beck cost less?

Our philosophy is: Excellent quality and reliability, at a cost that beats the jackets off other diskettes. We can do it because we (1) put our money into the product, not mega-marketing schemes and fancy packaging; and (2) sell our money-saving 25-diskette pack to you direct via a toll free order line, so you get fast, door-to-door service efficiently.

**When you buy Beck, you've got the best.  
Beck Quality. Beck Reliability.  
And, of course, Beck Price.**

1D, soft sector 5 1/4" diskette \$2.19 each  
2D, soft sector 5 1/4" diskette \$2.79 each

**For IBM, Apple, TRS and 97% of popular microcomputers.**

### What about quality and reliability?

At Beck, our success as a diskette manufacturer depends upon our ability to provide you with a fully reliable, quality diskette - every time. For that reason we take no shortcuts. You get the best because we are committed to excellence. Every diskette is manufactured to very strict quality standards. We test and retest 21 times throughout the manufacturing process to insure compliance with no less than 42 rigid specifications. We make sure you get the very best - a 100% certified, 100% error free diskette.

**Our satisfaction money-back guarantee and full 7 year warranty are proof of our commitment to excellence and confidence in our product.**

# ELECTRONIC MAIL BURSTS INTO BUSINESS

---

A SURVEY  
OF THE  
BURGEONING  
FIELD OFFERS  
SOME BASIC  
GUIDELINES.

---

I received an intriguing envelope in the mail this morning. It was white, with a bold blue stripe across the front, and bore the words "E-COM: Electronic Computer Originated First Class Mail." I opened it first, bypassing nearly a dozen other letters jammed into my mailbox.

If you receive one of these attention-getting envelopes or a bright yellow, black-banded one from Western Union, then, like me, you're in the middle of the electronic-mail revolution, and you didn't have to do anything to get there.

#### **Defining Our Terms**

What is electronic mail? Like other computer jargon, the phrase is variously interpreted, depending on who's doing the talking. When I use it, I'm talking about business or personal corre-

M·A·I·L

spondence generated or transmitted via Apple computer. I'm talking about the electronic equivalent of letters, memos, interoffice directives, telegrams, telexes, reports, and other textual information. The term also suggests the idea of "co-response," which means communication between two entities. I write you a letter and you can, if you choose, respond to it.

#### Defining the Users

Who's using electronic mail these days, and why? Users include a wide spectrum of business people, from entrepreneurs like Jim Barnett, a Dallas insurance consultant who regularly communicates with clients in London, to the 200,000-member U.S. Chamber of Commerce, which plans to combine Apples with dedicated word-processing systems and mainframe host computers.

Automobile salespeople, computer programmers, writers, corporate vice-presidents, newsletter publishers, word-processing service bureaus—that's who's using electronic mail. Just about everyone is beginning to zero in on its advantages.

#### Defining the Advantages

Its major advantage, of course, is speed. If Apples talk directly to Apples, you have virtually instantaneous communication. If Apples talk to intermediary services, such as the U.S. Post Office or other mail carriers, delivery takes a day or two. If your business generates large volumes of mail, electronic delivery may be the cheapest and most convenient method.

#### Getting On-Line

Apple owners who want to use their machines to send written messages to customers, coworkers, business associates, or friends can choose from many options. In general, your Apple can send (and often receive) mail in three ways: in connection with another Apple

BEFORE  
MAKING THE  
FINAL HOOKUP  
DECISION,

EVALUATE  
SEVERAL  
SYSTEMS,  
BECAUSE  
COMPETITION  
IN THE FIELD IS  
BEGINNING TO  
HEAT UP.

over the telephone, through an intermediary computer service, or with an electronic-mail carrier.

#### Apple to Apple

In the first way, your machine is connected directly to another Apple that has equipment compatible with yours. Both Apples need a modem, a phone line, and communications software.

If you have a phone line that can be dedicated at least part of the time to receiving and transmitting mail, you only need the phone company and the person you're communicating with. The phone company will bill you for long-distance calls.

Some communications-software packages let you compose messages with a built-in text editor. Others make you compose your letter by some other means, such as a word processor. Some word processors come

with electronic-mail capabilities as part of the program. Others permit you to use separate mail programs.

#### Point-to-Point Apples

The U.S. Chamber of Commerce is currently testing the direct, point-to-point way of communicating. The test involves Apple II's in its Washington, D.C., headquarters and in six regional offices throughout the country.

"Our major purpose," says Edward Ziere, vice-president of operations, "is to improve communications with our membership, and we want to do so rapidly. Our second objective is improved internal communications."

Once equipment and software are standardized in its offices across the country, the Chamber of Commerce will probably use one or more commercial mailing services, rather than using just the point-to-point mode, because, Ziere says, "We don't want to reinvent the wheel."

If wrestling with concepts such as *baud rates* and *protocols* is not your cup of tea, and you're perfectly satisfied with the conventional "wheel," you may agree. You should investigate the services offered by professional electronic-mail carriers.

#### Electronic-Mail Carriers

Jim Barnett is a small-business owner who has discovered the advantages of commercial mailing services. Barnett's multifaceted business involves manufacture and sale of Barnett's SuperBoard, which plugs into an Apple game port and provides amateur radio lovers the chance to see what they hear. Barnett got into telecommunications through his interest in ham radio, but he quickly branched out. He was intrigued by the possibility that he could increase the effectiveness of his business communications.

With his Apple II Plus, a sophisticated modem, and communications software that he has modified for his specific needs, he uses both telex and TWX systems at \$1.41 per minute during business hours. "I don't have to buy a telex machine, pay a carrier for a dedicated line, or pay for time I don't use," he says.

The international carrier he uses is ITT, because, he explains, it provides a "post-office-box" service, and his phone and computer are not tied up waiting for messages.

The ITT system stores mail addressed to Barnett until he retrieves it. This feature is especially important because of the six-hour time difference between Dallas and London and because he and his clients aren't always in their offices at the same times.

#### Who's Offering What?

The "post-office box" is only one of many features competing services offer. Most services have it, and some, such as Western Union's EasyLink, take the feature a step further: The system automatically dials your number until you answer and accept mail waiting for you.

Of all the services I contacted, the most courteous treatment and the promptest response to my requests for information came from two old standbys, the U.S. Postal Service and Western Union. Some of the newer entries in the mail-carrying business seemed much less accessible to me.

Querying my business acquaintances, I heard about similar experiences from people who had actually tried to sign up for services. Response time can be as long as several weeks.

Western Union, on the other hand, says it can get you on its EasyLink system within 72 hours. You use your own equipment and choose Telex I or Telex II

IF APPLES  
TALK TO  
INTERMEDIARY  
SERVICES SUCH  
AS THE U.S.  
POST OFFICE  
OR OTHER MAIL  
CARRIERS,  
DELIVERY TAKES  
A DAY OR TWO.

CHEAPEST  
AND MOST  
CONVENIENT  
METHOD.

(TWX); an electronic mailbox is optional. You can also send mailgrams, European mailgrams, telegrams, or E-COM letters and get a daily summary report of your out-

going traffic.

Subscribers to information services such as CompuServe or The Source will find electronic-mail features already available to them. If the people you want to reach are also subscribers, then CompuServe's EMAIL or The Source's SourceMail may offer all the services you need.

Things get more complicated with the Post Office's E-COM system. You must complete a long test procedure to make sure your computer is communicating properly with the Postal Service's.

Most limiting of all for individuals or small businesses, you must transmit at least 200 letters at a time. If you don't plan to be a frequent or heavy communicator, you should check the Yellow Pages to find a subcontractor who will transmit your occasional letters.

E-COM offers some substantial advantages, though. Twenty-five post offices in major cities around the country offer this service. Someone can format, print, fold, address, and deliver your text files within two working days, all without your handling a hard copy. Recipients need not have computers to receive mail from you. This feature makes E-COM a natural for direct-mail advertising projects.

GTE Telenet's Telemail, ITT's DialCom, MCI Mail, and others offer similar electronic-mail systems. Before making the final hookup decision, you should evaluate several systems, because competition in the field is beginning to heat up. Shop around until you find exactly the features you want at the lowest price.

#### A User's Perspective

Edward Ziere, who is deeply involved in instituting electronic mail at the U.S. Chamber of Commerce, has some advice for anyone considering a large-

scale electronic-mail system. Many of his recommendations also apply to small-scale users.

First, he cautions, people in a very large company may find themselves braving a whole new world—the world of retailing. The corporate-procurement process can take on unexpected dimensions in a retail environment as competitive, complex, and technical as the computer industry. “We found having to operate in a retail environment rather a new experience for us,” he says.

The options for hardware, software, and services can stagger you. You must perform many tasks: select appropriate equipment, arrange for hardware repair and software support, train personnel to use computing tools, and elicit personal commitments to make the program work.

Procurement itself can be a major concern. How can you determine what's available, what's best for you, who sells it, who provides service and support, the type of warranty, and how to train your people to use the system?

Ziere urges business people who want to use electronic mail to define the specific problems they want to solve. “Identify clearly what you intend to accomplish,” he warns. Then define your hardware and software needs carefully and seek reputable products that meet your needs. Determine who will support those products and the extent of that support.

“As purveyors of corporate information services across the country,” Ziere explains, “we were particularly concerned about the widespread availability of hardware service and about whether our users could get technical advice, either locally or by hot line.”

Next, be aware of hidden costs. Remember, if you plan to install several com-

IF YOU PLAN  
TO INSTALL

COMPUTERS,  
YOU'RE  
TALKING ABOUT  
COMMUNI-  
CATIONS  
HARDWARE  
AND  
SOFTWARE  
FOR EACH  
COMPUTER.

puters, you're talking about communications hardware and software for *each* computer. You must provide both time and a supportive atmosphere for newcomers to computers. “Be prepared to let your people have room to learn, grow, experiment, and gain the confidence they need before they can use these machines profitably,” Ziere says.

#### Putting It All Together

Electronic mail is one of the fastest-growing segments of telecommunications. Mail is the lifeblood of the nation's business community, and that community is embracing the technology that permits speedier, more reliable, and more convenient communications between it and its customers. Whether you want to send one letter or thousands, an electronic-mail service is available to meet your needs.

## ► TELECOMMUNICATIONS BY STEVE ROSENTHAL

### A short glossary of Apple data communications

**103**—the industry standard for modems that exchange data at up to 300 baud (30 characters per second). Any Type 103 modems can exchange data with each other, regardless of brand.

**202**—a type of modem for older big computers that sends data at 1200 baud (120 characters per second). Don't buy one for use with an Apple—they can't communicate with the more common Type 212A modems.

**212A**—the industry standard for modems that exchange data at up to 1200 baud (120 characters per second). Almost all have built-in 300-baud modems as well. Any two Type 212A's should be able to exchange data, regardless of brand.

**ACOUSTICALLY COUPLED**—a modem that you connect to the telephone system by putting a telephone handset in a mating speaker and microphone built into the modem case. It's not as reliable as direct connection, but it doesn't require a modular jack to plug the modem into.

**ANALOG LOOPBACK**—connects the telephone side of a modem to itself internally, so you can test the modem by sending computer data in and seeing if it is converted to tones and back to data correctly.

**ANSWER MODE**—set to the tones the modem that answers the phone normally uses. The other modem must use the Originate mode. On auto-answer modems, set to answer the phone when it rings.

**ASCII**—the standard code used with microcomputers to represent letters, numbers, and symbols as bit patterns. Any two computers that use ASCII can exchange text files, but not necessarily programs or other data files, over the phone.

**ASYNCHRONOUS**—the method of sending characters back and forth between personal computers, in which there can be pauses between characters.

**AUTO-ANSWER**—a setting on some modems that tells the modem to answer the phone and tell your Apple that a call has come in.

**AUTO-DIAL**—a setting that lets the

modem do the dialing (in response to what you type in on the keyboard or based on stored numbers) instead of having you dial numbers on a separate telephone. More advanced systems wait for dial tones, detect busy signals, and redial.

**BAUD RATE**—a measure of the speed at which data can be transmitted by modem. In a personal-computer context, it is usually ten times the number of characters (or bytes) transferred per second. You don't need to worry about the technical difference between baud rate and bit rate unless you design circuits.

**BLOCK TRANSFER**—a mode on some communications programs that sends data in chunks, checking that the data has been received without errors before going on to the next chunk.

**BUFFERED CAPTURE**—having the Apple store data in memory as it receives it from the modem. You can then store the data on a disk, display it, or print it.

**BUFFERED PRINTING**—having the Apple store up characters as they come in over the modem, and sending out blocks of the stored characters when the printer is ready for input. This approach prevents loss of data if you're printing a file and characters come in while the printer is performing a carriage return. If your printer can't keep up with the data, some communications programs tell the sender to pause for a moment, as needed.

**CARRIER**—the tone signal the modem transmits. Most modems check for this tone to make sure that there is another modem on the other end of the conversation.

**CHAT MODE**—a communications link that enables a person at each end of the link to send and receive messages as they are typed at the other end, allowing a sort of written conversation.

**CONTROL-Q (^Q)**—the control character that most bulletin boards and networks recognize as a signal that they can resume sending after you've asked for a pause. The character is also known as XON.

**CONTROL-S (^S)**—the control character that most bulletin boards and networks recognize as a signal saying you want them to stop sending for a moment. You might use this character to stop the screen while you read it, or

your communications program might send it out to ask the system to pause while it prints or stores data to disk.

**CRC CHECKING**—a method of detecting errors used by some communications programs.

**DATA BITS**—the bits that send each character over a communications link. Text requires seven or eight; programs need eight bits. Sometimes referred to as word length.

**DATA SET**—an older term for a modem.

**DIGITAL LOOPBACK**—connects the computer side of a modem to itself internally, so a user at the other end can see if data sent over the phone is being received and transmitted.

**DIRECT CONNECT**—a style of modem that plugs in with the same modular cord ordinary telephones use. If you have modular jacks, this type is best.

**DOWNLOAD**—to receive and store a file from another computer, particularly a bigger one. Many businesses now let users download files from their central computer to desktop Apples.

**DTMF**—an abbreviation for dual-tone multi-frequency, the technical name for the standard tones for tone dialing.

**DUMP**—to transfer the contents of a buffer to a disk or a printer.

**ECHOPLEX**—the mode in which the computer or system at the other end sends back a copy of each character it receives from you (you set your Apple in full duplex, so it won't show what you type directly). As you get each character back, you know that the character you typed has been received.

**ELECTRONIC BULLETIN BOARD**—a computer system that lets users dial up with their computers and read or leave messages. You can use an Apple to run a bulletin board, but you should have a hard disk.

**ELECTRONIC MAIL**—a system for sending messages through computerized systems. You can use more than half a dozen commercial electronic-mail systems with an Apple or set up your own small one for your own private use.

**FULL-DUPLEX**—in data communications, a connection or program that can transmit data in both directions at the same time. It also means that characters sent out do not appear on the screen unless the other system echoes it back. This is the mode you normally

use with an Apple to hook up to an information utility or a data bank.

**HALF-DUPLEX**—in data communications, a connection or program that can transmit data in both directions, but only one direction can transmit at a time. Used mostly by older computers, or for the high-speed links of big computers.

**HOST**—the large computer or network that regulates the exchange with a large-computer network, or the personal computer that takes that role in a computer-to-computer exchange.

**LOCAL-AREA NETWORK (LAN)**—a system connecting several computers in a single building or cluster. These systems allow personal computers to share files, large disks, and printers while remaining able to do their own work.

**LOG ON, LOG-ON**—the procedure of telling a computer system that you want to use it. For dial-up systems, this is the first part of the system that you see. Some log-on procedures require you to enter an access code or password to protect the system from unauthorized use.

**MESSAGE BUFFERING**—for a system, holding messages until the receiving party is ready for them. For communications software, storing data that comes in over the modem in memory or on a disk.

**MODEM**—the printed circuit board or box that translates computer data back and forth into a form suitable for transmission through the telephone network. You can get ones that fit into slots on the Apple or stand-alone models that connect to a serial card.

**MODEM7**—a public-domain data-communications program for use on Apples running CP/M. Sometimes also used to refer to the error-checking method this program uses.

**ORIGINATE MODE**—set to the tones the modem on the end making the phone call normally uses. The modem on the other end must use the Answer mode. Also, in some communications programs, set to place a call rather than receive one.

**PARITY**—an error-checking feature communications programs use. The sender adds a 1 or 0 bit to each character as necessary to bring the total number of bits for each character to the state agreed on (either odd or even). The receiver then checks to see if char-

acters have the specified odd or even total number of bits. If not, it means that one or more bits must have been changed. You can set parity to odd, even, mark (always a 1), or space (always a 0).

**PROGRAMMABLE DIALING**—a feature of some modems that allows storage of phone numbers in the modem program. You can call any of these programmed numbers by selecting them from a menu.

**PROTOCOL**—a method for regulating how data is sent back and forth in a telecommunications system—akin to the “rules of the road” for highways. Sometimes systems refer to a No Protocol mode, but they really mean an implied protocol based on the way computers have traditionally been hooked up to simple terminals such as Teletypes.

**PULSE DIALING**—the type of dialing produced by rotary-dial telephones and an option on some auto-dial modems. It's necessary where the local telephone exchange won't accept tone dialing, but this mode is unusable for many non-AT&T long-distance services.

**RS-232 INTERFACE**—a connection based on an industry standard for attaching computers or terminals to modems. It's now also used as the standard “serial” interface and is often found on printers and other peripherals as well.

**SERIAL CARD**—a plug-in card for your Apple that translates the data from the internal form (8 bits at a time on parallel wires) the Apple uses, back and forth to the form modems and some printers use (8 bits one after another on a single wire each way). You need a serial card to hook up an external modem.

**SLOT 2**—the slot you use for a modem card or serial card for talking to a modem. Because most modem software expects to find these cards in slot 2, you have to alter the software if you use some other slot for this purpose.

**START BIT**—one or more extra bits you add to each character for asynchronous communication to tell the receiving system where to look for the data bits. Almost all systems that you would access with the Apple use 1 start bit per character, but a few use 1.5 or 2.

**STORE AND FORWARD**—a mode of operation for electronic mail in which the sender is not connected directly to

the receiving party. Instead, the sender loads the message into the system, where it is stored if necessary and delivered to the receiver at his convenience.

**SYNCHRONOUS**—a mode of transmission on networks based on large computers. Apples and other personal computers usually use the asynchronous mode, but you can get a special board to adapt Apples to the big-machine method.

**TTL INTERFACE**—a connection that works on signal voltages in the range the Apple uses internally. It is standard for parallel connections, but serial interfaces usually employ higher voltages.

**tone dialing**—dialing using tones instead of pulses. Tone dialing is faster and is needed for most computer-controlled systems such as long-distance services, banking by phone, and remote control of home appliances. Some telephone exchanges are not equipped for tone dialing, and in many areas you must pay extra for a tone-dial line.

**UPLOAD**—to send files to another computer, especially a bigger one.

**WORD LENGTH**—in data communications, the number of bits for sending each character over a communications link. It can be either 7 or 8 for text, but must be 8 for programs. Sometimes referred to as data bits.

**XOFF**—a signal that you want the system at the other end to pause. Most networks use the Control-S character for this purpose, but on many software packages for the Apple, you key in some other letter or combination to send this signal.

**XON**—a signal that you want the system at the other end to resume sending. Most networks use the Control-Q character for this purpose, but on many software packages for the Apple you key in some other letter or combination to send this signal. Some networks also send this character to you as a prompt each time they expect an answer.

**XON/XOFF**—a protocol (way of regulating how data flows in a communications link) that lets the receiver tell the sender to pause by sending a XOFF character and to resume by sending a XON character. If you're receiving files and storing them on disk, you need a protocol such as this or you will lose characters that come in while your Apple is storing away parts of the message on disk.

# O N - L I N E

## With NewsNet, you can have a wealth of information at your fingertips.

If you are an investor, executive, or other businessman, you've probably received advertisements urging you to subscribe to newsletters promising you the inside story on investments, a particular industry, or some other specialized field. These specialized newsletters thrive because they can provide timely information and analysis that are not available in other publications. To keep yourself informed of events directly or indirectly related to your field, you could subscribe to a virtual library of newsletters and then spend an inordinate amount of time and effort extricating information. Alternatively, you can plug into a single database that takes advantage of the speed and power

of telecommunications and your Apple computer.

NewsNet, a database founded in 1981 and on-line since April 1982, offers 142 newsletters, five UPI news wires, and a press-release news wire. About a dozen of the newsletters are available exclusively through its service. NewsNet divides the newsletters into 33 industry categories, from Advertising and Marketing to Telecommunications, with a variable number of newsletters found under each category—Electronics and Computers holds 17 newsletters, Telecommunications has 21, and Retailing contains only one. You can search and retrieve articles from the individual newsletters and the press-release wire or trigger an automatic searching feature to notify you of articles matching your interests.

NewsNet keeps searching and retrieval procedures simple and easy-to-use. It uses a combination of

commands, keywords, and menus to find newsletter articles.

The system uses three main commands—Read, Scan, and Search. Read provides the full text of a newsletter, Scan gives only the headlines, and Search lets you search the entire database. You enter a command followed by the code of a particular newsletter, the code of a particular industry, or the word ALL for the entire database. The system then asks for a date range. You can input LATEST, for the most recent issue; EARLIEST, for the first issue available; ALL for all issues; or specific dates. You can use NewsNet's Type Ahead feature, which lets you enter several commands at once, to speed your search.

It is best to use each of the three main commands for a particular purpose. You should use the Read command primarily for examining particular issues. Obviously, READ ALL

ALL, which roughly translates as “read the entire database,” does not help you pinpoint particular areas of interest. READ EC22 LATEST, however, which translates as “read the most recent issue of the newsletter The Business Computer by PK Associates, Inc.,” will provide timely analysis and information about computers for business use.

Scan allows you to examine the headlines before selecting specific articles to read. This command is also best used with a single newsletter. Its main advantage is saving you time by letting you winnow out the pertinent articles from the irrelevant ones.

Search represents the backbone of NewsNet's system and lets you search using specific keywords. Search works best with an industry code or the entire database. You can use up to seven individual keywords and string them on one line. For example, if you enter “Apple IBM computer,” the system assumes you want articles containing all three keywords—*Apple*, *IBM*, and *computer*.

NewsNet builds some flexibility into keyword searching to help you find all the information in the database about a particular topic. If you insert an *or* between the words—for example, *Apple or IBM or computer*—the system will return all articles containing at least one of the keywords. The *or* option is useful when you are not quite sure how something would be named—for example, *Bell or ATT* and *Peanut or PCjr*.

If you insert an asterisk after a keyword—for example, *compu\**—the system finds words that start with the letters to the left of the asterisk, such as *computer*, *computers*, *computing*, and *computerized*.

Keyword searching gives you flexibility, but it does possess a few idiosyncrasies of which you should be aware. Suppose you want to find articles about Apple and IBM computers. If you use *Apple IBM computer*, you will indeed

---

**The more specific  
the keywords,  
the better  
your chance  
of weeding  
out irrelevant  
articles.**

---

retrieve articles about that subject. You might also retrieve stories about an orchard that keeps track of its apple production with an IBM computer. The rule of thumb is the more specific the keywords, the better your chance of weeding out irrelevant articles.

Also, different keywords representing the same idea carry different meanings. For example, in a recent issue of Defense R&D Update by Industry News Service, Inc., the keyword *airplane* did not retrieve a single article.

Substituting *aircraft* for *airplane* retrieved ten.

Finally, if you use the \* function, you can retrieve nonessential articles. Entering *compu\** also returns *compulsive*, *compunction*, and *compurgation*.

Once the system retrieves articles from your Search, you choose from three commands: Head, Text, and Analyze.

Head functions exactly as Scan does and lists the headlines of the articles in chronological order in menu form. To choose a particular article, you select a number from the menu, and the full text of the article appears on the screen.

Text functions exactly as Read does and displays the full text of the articles.

Analyze screens and categorizes the results of your search into table form. The table lists the total number of articles found by the search, the newsletter code and name, and the number of articles in each newsletter. Analyze lets you narrow your search by displaying which newsletters contain the articles and giving you an idea of where articles relating to your topic appear. A second search pinpoints your exact interests.

Once you have chosen an article, certain control commands help you avoid missing important information, reading irrelevant stories, and suffering eyestrain. NewsNet displays text continuously, so the words scroll from the bottom of the screen to the top. If you press Control-S, the display freezes; Control-Q unfreezes the display; and Control-P abandons the text and re-

turns you to the next prompt. The S and Q commands work instantaneously, but the P command takes about 10 to 20 seconds to return to a prompt.

Although NewsNet specializes in newsletters, it offers some time-oriented services. Although newsletters are published from daily to monthly, NewsNet updates these time-oriented services more than once per day. Much of the newsletters' information is perishable, and it often becomes outdated by the end of the day.

PR Newswire distributes full-text versions of about 150 press releases per day from its 7000 sources, which include corporations, government agencies, unions, nonprofit organizations, and major public-relations firms. Most of the press releases contain business news, with emphasis on contracts, mergers, earnings, and other financial information. PR Newswire is updated every hour on the half hour and uses the same search procedures as other newsletters.

Other time-oriented services include Daily Petro Futures, AgriMarkets Data Service, Fintex All-Day Foreign Exchange Monitor, Fintex All-Day US Money Market Monitor, Fintex International Economic Summaries, and Trude Latimer's Stock Traders' Hotline.

Since the whole idea of telecommunications is to get information to you faster than traditional print methods, NewsNet has set up an electronic clipping service called NewsFlash. This service monitors all incoming information from the newsletters, PR Newswire, and UPI news wires. NewsFlash is NewsNet's most popular service.

You provide keyword phrases—a maximum of ten phrases of 79 characters each—just as if you were searching the database with the Search com-

mand. You can easily alter, add, and delete keyword phrases. You can choose to monitor a single newsletter, an industry category, or the entire database. You can also choose to exempt up to four newsletters or industry categories from the search.

Unlike the regular Search command, NewsFlash searches for your keywords and extracts incoming news automatically, without you interacting with the database. Since it only examines fresh incoming news, the information is fresh and current. In fact, NewsNet receives the on-line editions of newslet-

**Although newsletters  
are published  
from daily  
to monthly,  
NewsNet updates  
these time-oriented  
services more  
than once  
per day.**

ters before the print versions are mailed.

As newsletters and other news arrive at NewsNet, the system tallies and stores the "hits," or articles, NewsFlash has captured. NewsNet provides two options for retrieving the articles: Online and Outcall.

Online lets you read the articles on the screen. Each time you sign on to NewsNet, the system tells you how many hits NewsFlash found and asks if you would like to read them. The system displays the headlines, five at a time, in menu form. You can pick a headline and read the article or go to

the next set of five headlines. You can save NewsFlash articles.

Outcall sends the articles to a teleprinter in your office as fast as NewsNet receives them. You must rent the teleprinter from NewsNet and keep a dedicated telephone line open at all times. Outcall also carries a telecommunications surcharge.

NewsNet contains other commands to help you use the system. The Help command provides a thorough explanation of a particular searching or retrieving function and then gives a clear step-by-step example of how the function works.

Paging sets text output at 24 lines per screen, so you do not have to fiddle around with the S and Q commands. Nopage returns the output to continuous display. The Info command, followed by an industry category, describes the industry and the newsletters available within a particular category. The same command, followed by a newsletter code, displays promotional information about the newsletter.

You can use the Order command to order print subscriptions of the newsletters, more information, and NewsNet's teleprinter and other equipment. Prices lists all newsletters and the price per hour to read their articles. Library holds sample copies of most newsletters.

NewsNet offers an interesting version of electronic mail, appropriately called Mail. It is not trying to become a postal system, so you cannot send messages to other subscribers. You can, however, use Mail to send messages to the newsletter publishers and receive messages back from them. You can also send comments, criticisms, and pleas for help to NewsNet. NewsNet checks for messages several times per day and tries to answer questions and acknowl-

edge comments within 24 hours.

NewsNet does not publish a users' manual for the service. It does include a six-page guide listing the newsletters, a two-page listing of the newsletters and their rates, a four-page overview on searching procedures, one page describing a sample search on NewsFlash, and one page listing all commands.

In addition, NewsNet publishes, both in print and on-line, a monthly newsletter of its own called NewsNet Action Letter. It contains searching tips, newsletter information, reviews of telecommunications equipment and software, answers to questions received by the Customer Service Department, and general news and trends in the telecommunications industry.

For really urgent questions and comments, NewsNet staffs a toll-free hot line on business days from 9:00 A.M. to 8:00 P.M. EST.

So what does all this business information cost? If you have only a vague idea of what you are looking for and have not bothered to figure out how the system works, it costs a lot. If you have pinpointed a particular topic and become familiar with the system, it costs a reasonable amount.

NewsNet presents new subscribers with a \$24 coupon, which provides one free hour of use to learn the system. If the rates seem expensive, keep in mind that if you ordered print subscriptions to all the newsletters available on NewsNet, it would cost you over \$20,000 annually. Presumably, like subscribing to newsletters, NewsNet costs are tax-deductible.

During business days, from 8:00 A.M. to 8:00 P.M. EST, NewsNet charges a flat \$24 per hour to Scan, Search, and use other system features at 300 baud. During off-hours, from 8:00 P.M. to 8:00 A.M., and all day on weekends and holi-

days, NewsNet discounts its flat rate 25% to \$18 per hour.

For actually reading (or seeing the text of) articles, NewsNet charges a different rate, depending on the newsletter and whether you subscribe to the printed version or not. If you already subscribe to the print version of a newsletter and get the newsletter publisher to confirm it, you use a "validated" rate from \$24 to \$72 per hour at 300 baud. If you do not subscribe to the print version, you use a higher "nonvalidated" rate of between \$24 and \$120 per hour at 300 baud. NewsNet discounts its validated and

---

### NewsNet offers a wide selection of business newsletters.

---

nonvalidated rates 25% if you Read during off-hours.

All rates are doubled when you use 1200 baud. The Mail service to send a message to NewsNet and a subscription to the print version of NewsNet Action Letter are free of charge. NewsNet carries a \$15 per month minimum charge.

According to NewsNet, roughly 80% of all newsletters carry a \$24 per hour validated read rate, and retrieving an average 16-line article costs about \$0.25 at 300 baud. Although the rates vary, the cost averages out to about \$27 per hour for a validated subscriber and \$50 per hour for a nonvalidated subscriber. Typical subscribers can expect to spend about \$50 per month for NewsNet services.

The Outcall service of NewsFlash carries a surcharge, and you must rent a teleprinter from NewsNet to receive the service. The teleprinter has a one-time

\$50 shipping and handling fee and costs \$59 per month to rent. You pay the Read rate for articles sent via the teleprinter.

NewsNet plans to offer 175 newsletters on-line at the beginning of 1984 and 300 newsletters by the end of 1984. Newsletters scheduled to appear include Howard Ruff's *Financial Survival Report*, *The Wellington Letter*, *Medical Abstracts*, a newsletter from American Banker, and *Commerce Clearinghouse's State Tax Review*.

NewsNet obviously put a lot of thought into creating an easy-to-use flexible system. By combining a limited number of commands with keyword searching, NewsNet offers a simple yet versatile system that you can easily learn and operate. Any lapses in memory are more than compensated for with the elaborate Help command.

My only gripe against NewsNet is the lack of a manual. NewsNet does provide subscribers with information, but it is scattered throughout various loose pages and numerous Action Letters. It is putting together a quick reference card, but it would be far better to place all the information in a three-ring binder.

You can spend a lot of money on NewsNet services. The key to keeping your costs low is to plan your search before signing on. Searching through two or three industry categories instead of the entire database saves time. Using the type-ahead feature also saves time. Scanning the headlines for relevant articles instead of plunging into the text saves a lot of time. With an on-line meter running, time is money.

NewsNet offers a wide selection of business newsletters and its innovative NewsFlash service highlights the ease and speed of bringing perishable information to a businessman's desk. It puts a virtual library of newsletters inside your Apple. +

# M O D E M QUARTET

A comparison of four modems that can turn your Apple into a great communicator

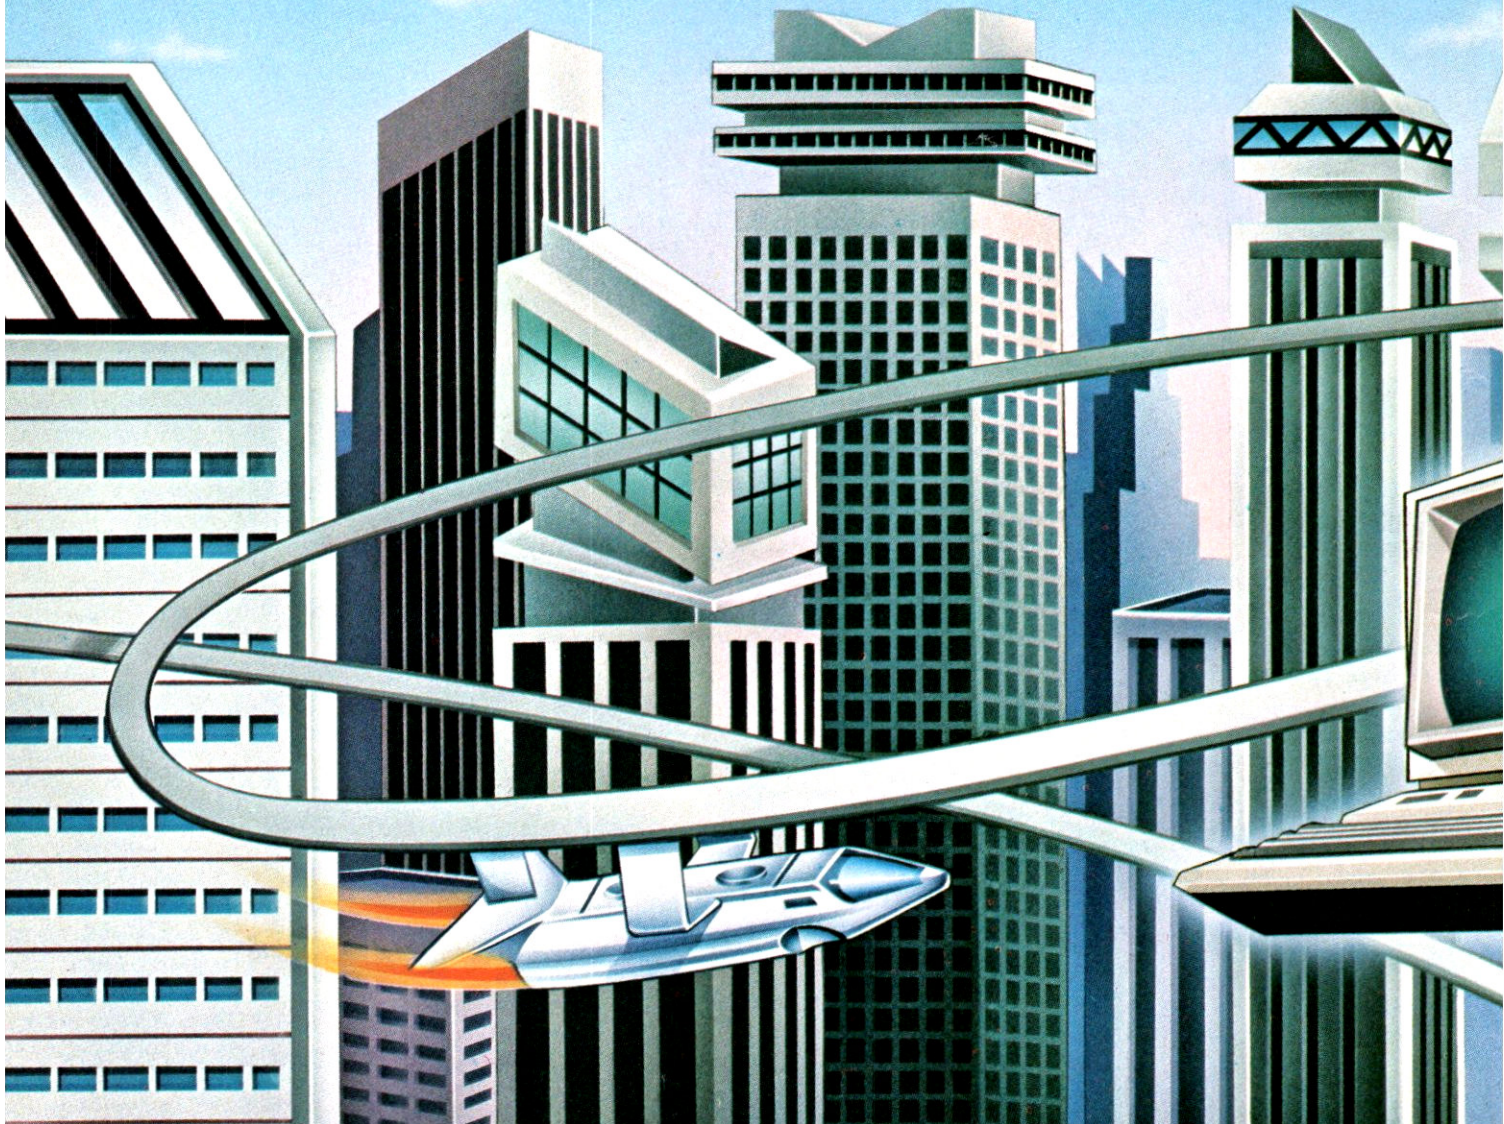

For this comparison article, I put four 1200-bps Bell 212A modems through their paces: the Password 1200 from U.S. Robotics, the 212 Apple-Cat II from Novation, the Smartmodem 1200 from Hayes Microcomputer Products, and the TransModem 1200 from the Transend Corporation.

All four are direct-connect modems—they plug directly into a modular phone plug rather than being acoustically coupled—that can place calls, using either Touch-Tone or rotary-pulse dialing. All can handle incoming calls either automatically or under a computer program's control,

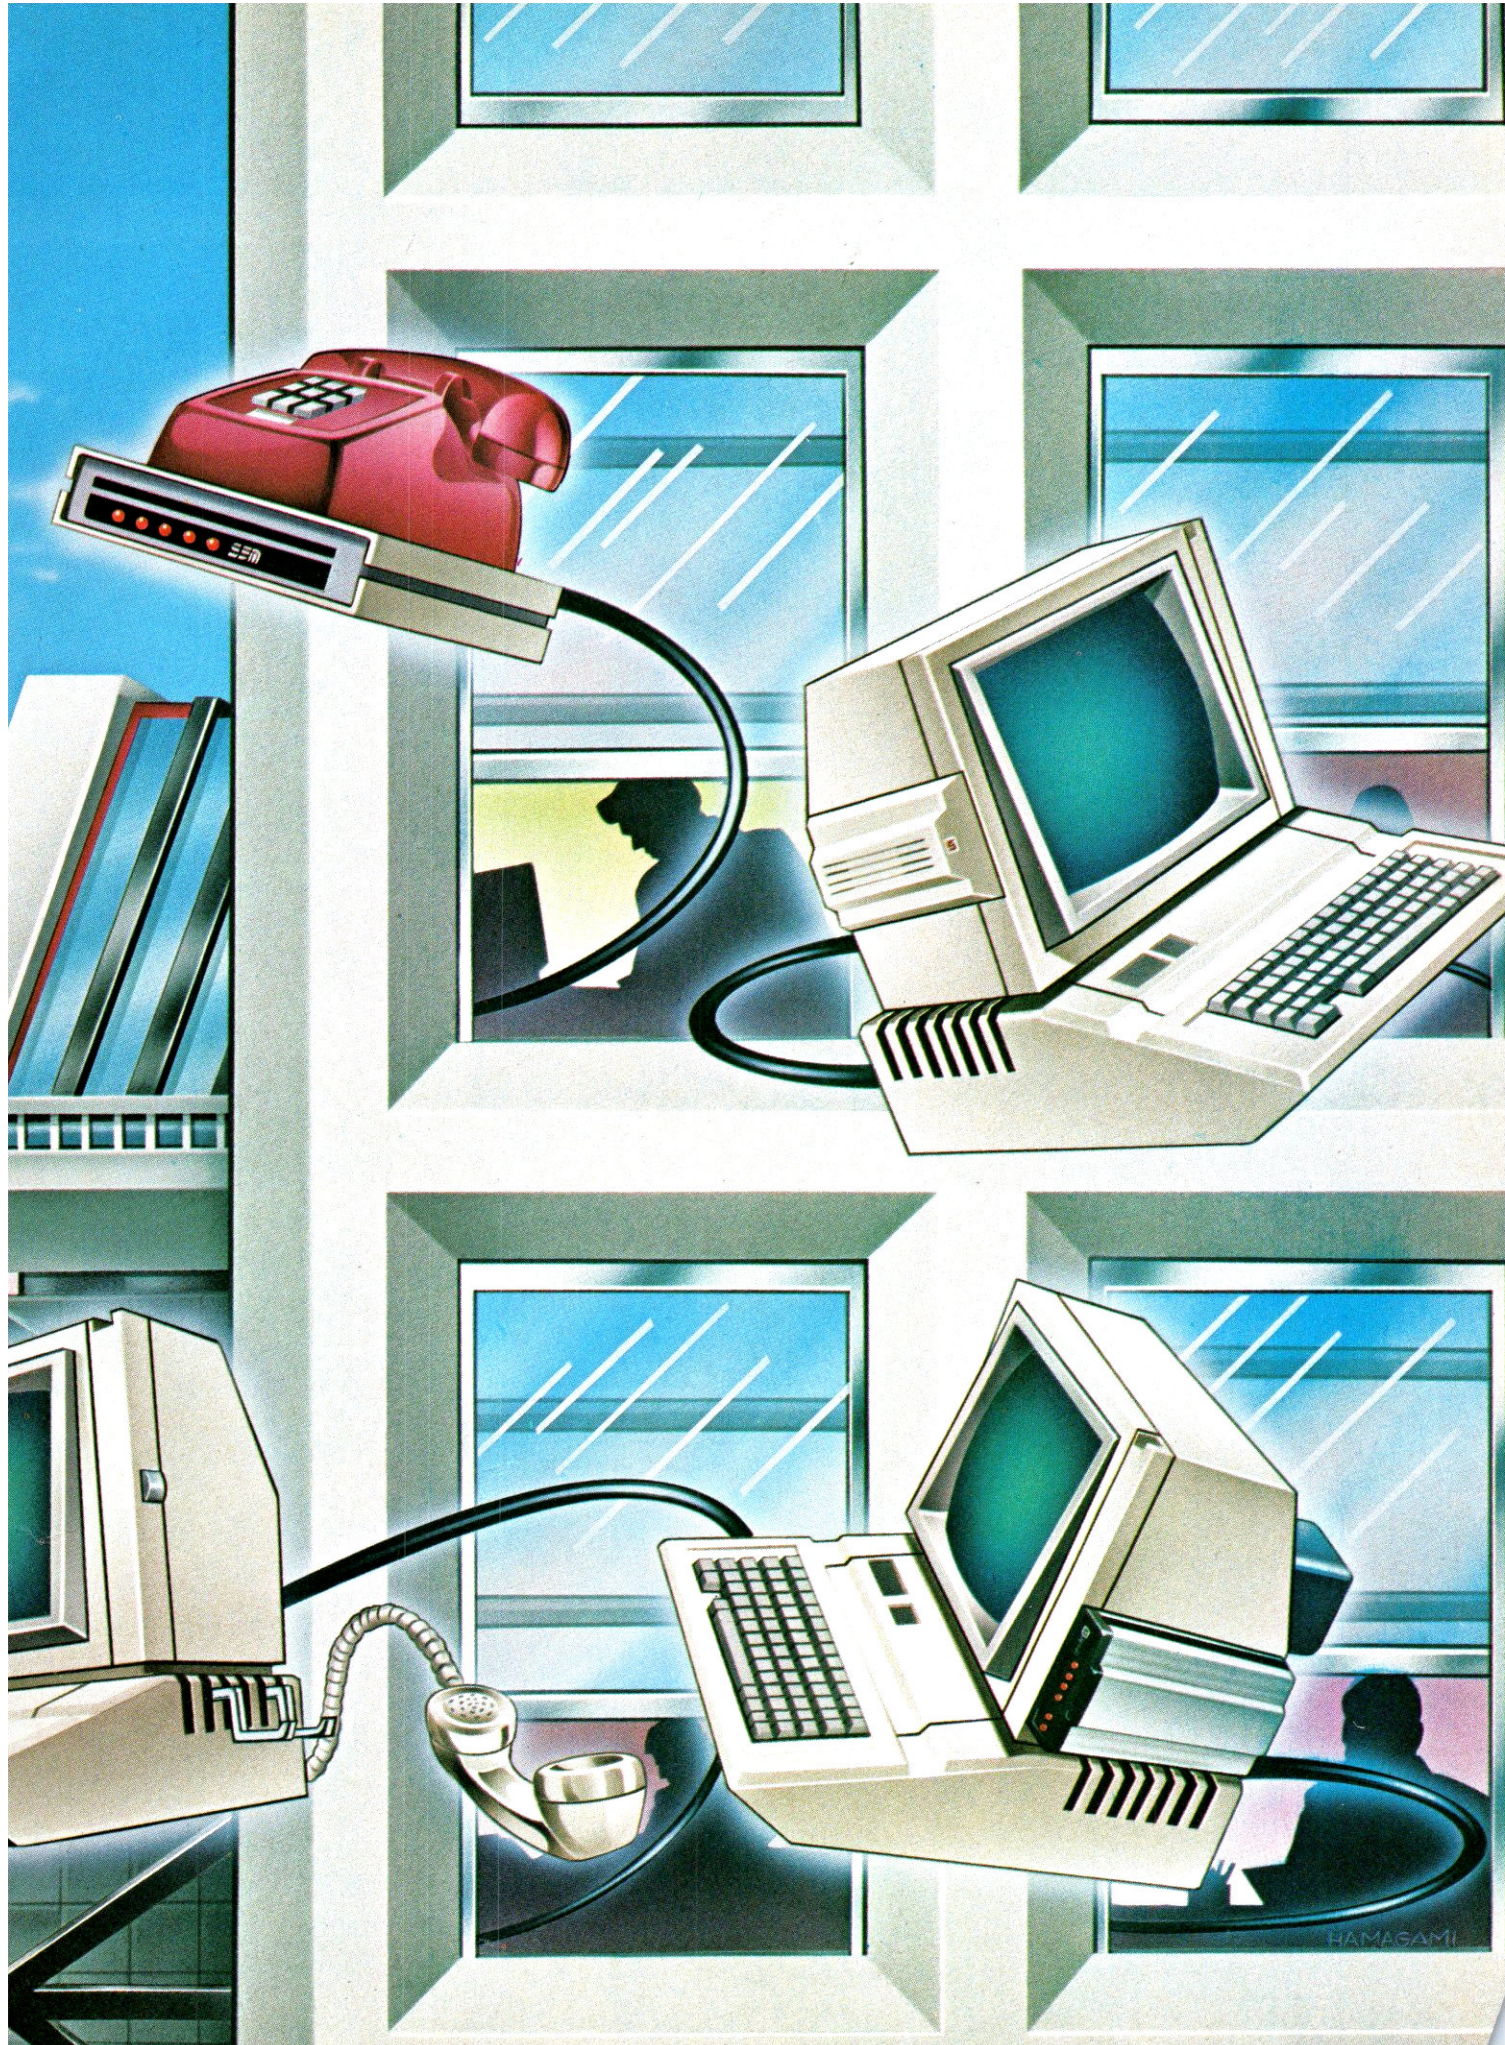

making your choices of software important. All but one of the modems, the 212 Apple-Cat II, are external, self-powered modems that require an RS-232 port to hook up to an Apple. Keeping this difference in mind, we will start our discussion with the one exception.

## Novation's 212 Apple-Cat II

The 212 Apple-Cat II, from Novation, Inc., was the only unit I tested that you install inside an Apple. This system's normal configuration, which consists of an Apple-Cat II modem card and a 212 Apple-Cat II Upgrade modem card interconnected with a jumper cable, requires use of two Apple slots. A slot-saver kit that comes with the modem lets you mount the Upgrade card on top of the power supply and patch it into the main-power-supply output with a separate cable. I'm not sure that this slot saver is a good idea—if you're that pressed for slots, then you're probably already taxing your Apple's power supply beyond reasonable limits. A modem

HAMAGAMI

interface with the Apple-Cat. You can control a BSR remote-control system as well as a cassette recorder with your computer. A plug-in ROM helps programmers who want more program control, and a Touch-Tone-receiver option allows the Apple-Cat II to decode standard DTMF (dual tone multi-frequency) tones from Touch-Tone telephones.

The Apple-Cat II's documentation is clear and complete. Its information can aid anyone from novices or casual users to advanced programmers or intensive users who might want to customize their modem software.

All in all, it is a superb product that has an added advantage: You can buy the unit as just a Bell 103, 0-300 bps Apple-Cat II, upgrading to full Bell 212 at 1200 bps whenever you want to. Both versions come with Com-Ware, so you won't have any compatibility problems.

#### External Modems

The Password from U.S. Robotics, Smartmodem 1200 from Hayes Microcomputer Products, and TransModem 1200 from Transend Corporation are all direct-connect, high/low speed, external modems that you can use with any computer or terminal with an RS-232C serial port. For the Apple, you'll have to purchase a peripheral card that will provide the Apple with a RS-232 serial port, as well as a cable to connect the modem to the Apple.

With the Password 1200, you can

with a printer, an 80-column card, and a Language Card already approaches too much power usage.

An acceptable solution to the slot problem involves using an expansion chassis from Mountain Computer, Inc., 300 El Pueblo Road, Scotts Valley, CA 95066. With this product a typical setup might be to put the modem cards in slots 2 and 5 of the expansion chassis while having the Apple's slots 0, 1, 3, and 6 enabled, allowing access to a Language Card, a Grappler+, a Videx 80-column Card, and disk drives, respectively.

This setup worked fine with plenty of slots to spare. If you already own one of the older expansion chassis models, you can buy the interface card separately to realize this added power. The possibilities with this system are extensive.

#### Com-Ware for the Apple-Cat II

To complete the hookup of the Apple-Cat II, you connect the system to the phone lines with the included phone-line cable. You turn on your Apple and boot the supplied Com-Ware 5.03 software. Com-Ware 5.03 turns your computer into a fully operational communicating terminal. This program takes over full control of the computer but still allows complete access to conventional DOS commands, which helps make this system as it is sold the most flexible for use with the Apple.

The Com-Ware software brings up a menu of all the available options (see table 1). You select terminal, modem,

and printer characteristics and save them to the disk, which is unprotected. You can dial numbers directly from the Apple's keyboard, or you can select them from the phone list of up to 26 numbers that you create on the disk.

Options with the Apple-Cat include an expansion box that plugs into the board and attaches to the side of the Apple. It gives you convenient access to required and optional equipment to in-

omit the cable, as the unit comes with an attached two-foot length of cable, terminated with an RS-232 plug. If you buy a Password, make sure you specify what connector you require, as several different types are available.

The units include a modular telephone socket for connection to the phone line and a power adapter that plugs into a standard 115-volt outlet. All three can place calls using either Touch-Tone or rotary-pulse dialing. They can answer calls automatically or under computer control. The Smartmodem 1200 and Password also have an on/off switch; the TransModem 1200 has a second modular telephone socket, which allows the connection of a handset or a second telephone without an external adapter.

The Smartmodem 1200 and the TransModem both use numerous LED lights to indicate modem and line states; the Password has only a logo-shaped light that illuminates when the unit is on. Lights are sometimes a helpful tool, but you'll miss them only if something goes wrong.

#### **Password 1200 and Smartmodem 1200**

Both the Password and the Smart-

modem 1200 use an audio speaker to let you monitor the progress of a call; on the Smartmodem 1200, the speaker

volume is adjustable, and you can disable the speaker on either machine under program/terminal control.

### ► WHAT IS A MODEM?

A modem is a device that enables terminals and computers to communicate via ordinary phone lines. The name modem is a contraction of two words describing the functions of devices that allow such communication. Digitized data from each computer must be changed to an analog representation suitable for transmission in a process called modulation. An incoming signal, in turn, must be restored to a digitized form, which can be read into memory—this is demodulation.

Telecommunications systems operate at *half-duplex* when only one of these functions can occur at a time, but most modems work at *full-duplex*, which allows for simultaneous bidirectional data flow between two modems. The speed of this interchange—measured in baud—can be excruciatingly slow. I had misgivings, therefore, when I agreed to evaluate four modems for *A+*. Nearly two years ago, I bought a Novation Apple-Cat II modem and subscribed to *The Source*, a major information utility, with visions of tapping the world's knowledge on-line and in real time, but I soon tired of communications at only 300 baud. I took a few naps waiting for the thing to transmit before concluding I'd made a mis-

take. The slow speed of data transmission made my grand plans too tedious to undertake.

Therefore, I looked at the *A+* project with more enthusiasm when I learned the devices in question were all somewhat faster, at 1200 bps (bits per second), gaining by a factor of four.

You get two-way traffic when each modem, depending on whether it originates or answers the call, operates at specific frequencies to send and receive data. The frequencies the originate modem uses complement those the answer modem employs.

Modems of the low-speed (1-300 bps) type are called Bell type 103, and they modulate signals using a technique called frequency-shift keying (FSK). This method requires a bandwidth 1.5 times the modem's baud rate. Baud, though often synonymous with bits per second, is actually the modulation rate, or the number of times the carrier signal is modulated per second.

FSK-encoded data differentiates between digital 1's and 0's by transmitting the 1's at a slightly higher frequency than the 0's. This results in a waveform that you could visualize as a waveform of constant amplitude with the digital 1's showing up as denser sec-

tions of the waveform.

The scheme above works fine for the slower Bell 103 modems, which require a maximum bandwidth of 900 Hz for full-duplex operation at 300 bps. This requirement falls well within the average 2300 Hz of bandwidth available on telephone lines between 700 Hz and 3000 Hz. This method falls short of working at a rate of 1200 bps, however, as this rate would require a bandwidth of about 3600 Hz, or 1300 Hz more than the bandwidth available from the phone company.

To overcome this limitation, an alternate method of modulation called phase-shift keying (PSK) or quadrature-phase-shift keying, increases the effective baud rate by encoding two data bits per baud. This way 1200 bps are encoded in a modulation of 600 baud.

Bell 212A modems, which use the PSK method, transmit at 1200 bps and are more sensitive to phone-line quality, as well as any distortion or noise in the system, than are the Bell 103 modems. Because of this sensitivity, it is necessary to incorporate more complex transmitting, receiving, and error-checking hardware in the Bell 212A modem.

## ▶ TECHNICAL DETAILS: TABLES 1, 2, 3, AND 4

P	—	Pick up phone
H	—	Hang up phone
A	—	Auto-dial
	D	—Dial a number
	R	—Re-dial a number
	L	—Dial number from list
T	—	Toggle between 103/212/202
C	—	Terminal chat
M	—	Terminal memory
Z	—	Toggle print (on/off)
U	—	Unattended answer mode
F	—	High-speed Com-Ware II transfer
	T	—Transfer data from memory
	R	—Receive data to memory
	<esc>	—Abort transfer
I	—	Toggle echo (local/remote)
L	—	Load memory from disk
S	—	Save memory to disk
X	—	Send memory

Logic 0	1070	2025
ANSWER		
Logic 1	2225	1270
Logic 0	2025	1070

Table 4: TransModem 1200 command menu

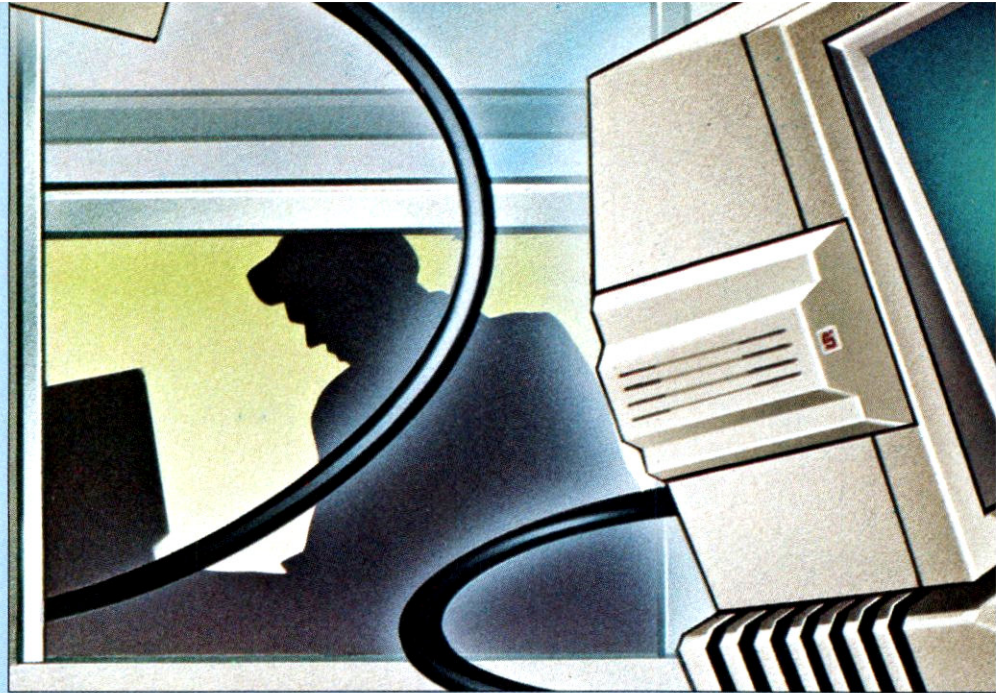

Hayes' and U.S. Robotics' approaches to making their products convenient are impressive. Most commands have sufficient mnemonic content to spare you from the tedium of a menu (see table 2).

The one feature of both command sets that stands out as ill considered is the A/ command. Although repeating the last command might seem to be a general and useful capability, having a last-number redial would be a more welcome convenience.

#### **TransModem 1200**

The TransModem 1200 from Transend Corporation (formerly SSM Microcomputer Products, Inc.; formerly Solid State Music) is both a capable and easy-to-use unit. Some of its more pleasant features are direct consequences of its powerful hardware. Its ability to detect a dial tone enables it to choose between tone- and pulse-dialing on the basis of the response it detects. Each time it detects a dial tone, either at the start of the dial operation or as a result of a K command, the TransModem tone-dials the next digit. If the dial tone remains, it pulse-dials that digit again and then the rest of the number; otherwise it continues to tone-dial the remaining digits. Another consequence of dial-tone detection is that you don't have to program a delay that will occur before the modem dials the first digit of a number.

When the TransModem 1200 detects a busy signal, it reports BUSY and hangs up, rather than waiting 30 or 60 more seconds and reporting NO CARRIER. If you enable the appropriate option, the TransModem 1200 can also detect a voice answering the phone.

If you buy a Password, make sure you specify what connector you require, as several different types are available.

Although the manual warns that this feature is not 100% accurate, it has worked without a hitch so far.

#### **Documentation**

One minor criticism of the TransModem 1200 concerns its documentation. Although it is adequate in most sections, several of its descriptions are both confused and confusing. One option description appears to have the enable and disable codes reversed. In defense of Transend, I have to say that the product obviously has been undergoing extensive upgrades and enhancements. Changes that postdate the manual are overprinted and on an insert. Since all these changes appear to

be real improvements, I don't object too much to the disruption. I do hope that when the revisions stop, the quality of the manual will catch up and begin to approach that of the hardware.

The Hayes Smartmodem 1200 comes with a Hardware Reference Manual that is complete, professionally bound, easy to use, and altogether worthy of the hardware it accompanies. In fact, the Smartmodem 1200 package is a good product in all respects, as its long standing in the marketplace demonstrates.

The U.S. Robotics Password seems like a scaled-down version of the Smartmodem 1200. Its functions and commands are essentially the same as those of the Smartmodem, the main difference being the Password's extensive use of VSLI chip technology to minimize the parts count and costs while maximizing system reliability. This modem performed at all speeds without difficulty. Its documentation, consisting of 16 8½ x 11-inch sheets stapled in the upper left corner, is not a glamorous affair, but it is intelligently laid out, clearly written, and altogether adequate for the purpose. As with the hardware, its production with a minimum of frills allows USR to offer a solid product at a relatively low price.

#### **In Sum**

You won't go wrong with any of these four modems. My testing showed all of them to be fundamentally sound, and I found them equally pleasant to use.

### **▶ PRODUCT INFORMATION**

#### **Smartmodem 1200**

Hayes Microcomputer Products, Inc.  
5923 Peachtree Industrial Blvd.  
Norcross, GA 30092  
(404) 449-8791

**Requires:** any Apple computer;

for editing time.

After you've entered, read, and edited your message, the last step is to send it. If the recipient is an MCI Mail user, he can retrieve it from his inbox as soon as you order the message sent. Otherwise, it goes out by mail or messenger, depending on what you select. If you specify RECEIPT when you address your letter, you'll be notified when the recipient has read his mail on the system, or when the letter was mailed or delivered.

#### Other Features and Services

One of the best features of the system is its error recovery. If you trip over a cable, lose power, or have to interrupt your session in the midst of composing a letter, you don't lose the letter. If you call back within a day, the system reminds you that you have an unsent draft, and you can finish or delete it.

The laser printer that prints out messages for U.S. mail and messenger delivery can also print out a copy of your letterhead and signature, if you supply a clean reproduction-quality copy of each. This service costs \$20 annually.

You can also sign up for Advanced Service, at \$10 extra per month. This level of service gives you five-day storage in your outbox instead of one, with the ability to store lists that you can reuse to send mail and the privilege of using commands instead of menus. Aside from the switch to commands, though, most of the sophisticated communications programs for the Apple can provide the same advanced features, so you may not need Advanced Service unless you are using a simple teleprinter or video terminal.

#### Actual Performance

As a communications service, this product is a welcome addition. Compared to ordinary express delivery, it is faster and often less expensive, and compared to sending text directly between computers, it is cheaper than a long-distance

YOU HAVE TO  
REMEMBER TO SIGN  
UP WELL BEFORE YOU  
WANT TO USE THE  
SERVICE

call and easier than directly connecting systems with different protocols and settings. It's wonderful to be able to send text whenever you're done, without having to synchronize schedules or worry about whether recipients remembered to turn on their auto-answer computer for the night.

They are probably due to the newness of the system, but I did run into two serious hardware problems. I found that the local (Oakland, California) phone to the system cut me off at random times, so I had to use the toll-free national number. If my experience is typical, the 800 number may be swamped with calls. Once, I sent an important four-hour delivery to New York and received a phone call the next day saying that the laser printer had broken and that text had not been delivered the day before, as scheduled. I would have expected MCI to have a backup system or at least to call me the day of the missed delivery.

As software, the system is barely acceptable. The menus, which are designed to lead less experienced users through the system step by step, are interminable, inconsistent, and

inconvenient. Unless you sign up for Advanced Service, you probably won't be able to make the system work for unattended operation for sending or receiving messages. The colon that the system uses to prompt for your input also appears within menus, so you can't program your Apple to respond automatically when it sees this character. The system periodically stops for an extra response when it thinks it

AS SOFTWARE, THE  
SYSTEM IS BARELY  
ACCEPTABLE

has filled your screen.

The process of sending a message takes much more time than it ought to. Because you can't know in advance exactly what your side of the exchange will be, you must be present when you send a message. I can fill out a Federal Express form, arrange for a pickup, and say hello to the driver faster than I can get a letter out with MCI Mail's Basic User service. If you're sending short messages, you'll find that the cost for your time is higher than the MCI charge.

Because of the lack of an error-checking protocol, you have to inspect all your messages or spell out critical numbers. I'd like to see options for both the widely used XMODEM protocol that most public-domain communications software uses and the new MNP protocol (endorsed by Apple, among other companies).

I would also like to be able to bypass the menus when I don't need them. I find it strange that I would have to pay \$120 per year more for Advanced Service to use the system more productively by using commands instead of menus, even though it would actually decrease MCI's costs and encourage me to use the system more. I'd also like to see someone with some experience and skill with responsive systems redesign the menus.

#### Signing Up

Despite all my complaints, I do use the system regularly and try to get anybody with whom I do business to sign up as well.

To get on the MCI Mail network, you have to open an account and get a password. Signing up takes only a few minutes, and you can do it by telephone, with your computer and modem, or by mail. By voice, you call (800) MCI-2255. An employee takes your information over the telephone, a process that lasts only a few minutes. You can also sign yourself up—dial (800) 323-7751 and sign in with the user name REGISTER and the password REGISTER.

After you sign up, you have to wait for your password and system-user guide, which takes a week to two weeks to receive. Thus, you have to remember to sign up well before you want to use the service. If you want to sign up but don't know whom to send a message to, write A+. +

# NEW STRATEGIES

## ► TELECOMMUNICATIONS BY BETSY GILBERT

Some case histories prove its value in dollars and cents.

A couple of years ago, when forecasters were saying that soon a computer would be on every business person's desk, plenty of snickers were heard. Today, those snickers have been silenced, and the reason can be summed up in a single word: networking.

Professionals from all types of businesses are discovering the benefits of tying their Apples (and other models) together in networks. As a result, more computers are being installed in businesses, and more professionals are learning what a difference a desktop computer can make.

Networking combines all the advantages of individual computers into one powerful system. Each user has both a personal system and access to the other computers on the network; people can share information through direct communication. Additionally, everyone can

share expensive peripherals, such as printers and mass-storage devices. When you calculate the expense of peripherals for each person in a system, the cost advantage of a network is obvious.

"Our company actually considered buying a number of single-user computers, but by the time we totaled up the cost of such a purchase, it was apparent that networking was much more economical," says Ken Sherwin, the principal engineer for technical support at TRW's Ross Gear Division in Lafayette, Indiana.

Specifically, Sherwin's group, a

# FOR NETWORKING

\$100 million operation with 2000 people, was considering the purchase of three Apple IIs, six floppy-disk drives, and at least one high-speed printer. What it got instead was a Corvus Constellation network, (from Corvus Systems, San Jose, California); five Apple IIs, and a 10-megabyte hard disk.

"We had started out initially with a single Apple system, which was to have been used in the area of hydraulic testing," explains Sherwin, whose division provides both new and replacement components for heavy industrial and agricultural vehicles. "As things turned

out, it didn't last too long in that job."

That happens when business people discover the advantages of computers. The lone Apple was soon assigned to what Sherwin saw as a more pressing need: manpower scheduling.

"Part of my job is ensuring that all our engineers are as efficient as they can possibly be," he says, "and one of their most inefficient areas seemed to be in scheduling their time. I figured the best way to overcome that problem was through the Apple."

That turned out to be true. The old scheduling system consisted of 3- by 4-

foot sheets of paper tacked to a wall, with penciled-in jobs that people altered constantly. It was replaced by a manpower database within the Apple, which produced clean printouts that engineers could read easily but could not alter without conferring with Sherwin first.

"We took the Apple and turned what has been a real disaster into a smooth-running operation," he says.

That success, however, led to another stumbling block. Scheduling duties had replaced hydraulic testing, the computer's original assignment. After consid-

ering alternative solutions to the problem, Sherwin opted for networking.

"It was obvious from our experience with the scheduling that we were going to need several computers and a lot more storage than we could get from floppy disks," Sherwin recounts. "It turns out that the day Corvus announced its Constellation network, we

**'The fact that we had to share one unit was causing a lot of unnecessary delays.'**

ordered it. In fact, we were the first buyers in the state of Indiana."

The original installation, purchased in mid-1980, was recently replaced by the new Corvus network, Omninet, with two 20-megabyte hard-disk drives. The number of Apple IIs has increased from 5 to 17; 10 are dedicated to hydraulic testing, 3 to word processing and 4 to hardware development and programming.

According to Sherwin, the company has saved approximately \$250,000 in labor alone since installing the network. Manual hydraulic testing, which involves many detailed factors, required two full-time employees and around 80 hours to complete *one* test. The same job takes only four hours with the Apple networking system.

#### **Increased Productivity**

Deon Whitman can appreciate Sherwin's enthusiasm over increased productivity through networking. As controller for L&H Plumbing in Placentia, California, he saw the 2½-year-old company grow from \$500,000 in sales to more than \$2.5 million in less than a year and saw the need for computer power grow right along with it.

"We specialize in plumbing contract work, primarily in residential construction, but also in the commercial and motel areas," Whitman says. "We were doing a healthy business our first year, but during the past 12 months, sales have just gone through the ceiling, and it's been a hectic job trying to stay on top of things during the growth."

Whitman attributes that impressive revenue leap to more attractive interest rates for builders as well as the recent surge in motel construction for the 1984 Olympic Games in Los Angeles. Whitman doesn't have much time to analyze the reasons for his company's

sales explosion, however; he's too busy trying to take care of business.

"We started out with a single desktop computer when the company first opened its doors," Whitman recalls, "but as we went through this tremendous growth period, it became obvious that we needed more computing power to handle what a single unit had handled before. Things like accounting, word processing, and financial modeling had expanded so fast, it was impossible to perform them all on one system."

The four people who most needed the system—the firm's president, office manager, receptionist, and Whitman himself—found themselves vying for computer time to get their jobs done.

"All of us needed access to the system throughout our workdays, and the fact that we had to share one unit was causing a lot of unnecessary delays for everyone," Whitman says.

Those delays prompted the company to purchase the Corvus Omninet system, a 20-megabyte hard-disk drive, and four Apple IIs in September 1983. Since then, the four principal computer users have been able to perform their jobs efficiently, without worrying that someone else will usurp their places at the computer. Each user has an individual file on the hard disk and an individual access code, so each can perform word-processing, accounting, financial-modeling, and other jobs without interference.

"If this kind of networking hadn't been available with Apples, the company would have likely gone with an IBM mainframe, or a minicomputer at the very least," Whitman says. "The alternative to that would have been slowing down or stopping our growth altogether, and that would have meant a lot of revenue down the drain. Fortunately, the Apples and the network were available to meet our needs, at a cost that we could easily justify."

#### **Fruits on Apples**

What's good for industry is also good for agriculture, as Mel Brown can attest. He is the president of the Wenatchee, Washington, Wells and Wade Fruit Company, a 66-year-old firm that grows and ships apples and pears. He discovered the benefits of networking when he purchased an Apple II to streamline the company's fruit inventory. Within a couple of months, employees throughout the firm were lobbying for their own computers.

"Before we got the first Apple, all our inventory was done manually,

something that's hard for me to imagine today," Brown says.

Considering the size of the company—it ships more than 600,000 cartons of fruit each year to the tune of \$7 million—it is hard to imagine performing a job as demanding as inventory with a pencil and paper. These days, however, that chore is just a dim memory.

"The first Apple proved so successful that we decided to install a few more," Brown says. "The only problem was the cost. Single-user computers would have meant buying additional disk drives and printers for each user, and we weren't prepared to invest that much money."

Fortunately, the company didn't have to, because Brown had heard about the Corvus Omninet, investigated it, and decided that networking was exactly what his organization needed. He installed the Omninet with a 20-megabyte hard disk and six Apple II Plus computers in October 1982. It's been smooth sailing ever since.

"No one can know what a difference a system like this can make to a company until it's been running for a while," Brown states. "Everyone who needs to use the network can do so without having to wait. The time that's been saved just in terms of document preparation has been unbelievable."

In fact, Brown adds, many records now retained on the computer were simply not kept during the pre-Apple days because of the time-consuming preparation involved. Today, employees use the network not only for sales invoicing and inventory, but also for sales-

**'The time that's been saved just in terms of document preparation has been unbelievable.'**

invoicing analysis, payroll and payroll records, general ledger, and accounts payable.

Furthermore, because the system's popularity is spreading, the company has ordered more Apples to add to the network.

#### **Analyzing Loans**

Violet Dawkins, like Mel Brown, has vivid memories of pre-Apple days. Her firm, the CoAmerica Bank of Detroit, Michigan, analyzed commercial loans the old way—by hand—before install-

ing 14 Apple IIIs and a 33-megabyte hard-disk drive on the Cluster network from Nestar Systems, of Palo Alto, California. Since then, the analysis work has been substantially easier.

"We have a group of 60 bank-credit analysts located in our headquarters building and in four branches in the Detroit area," Dawkins explains. "When a company calls for a loan, it's the analysts' job to review that company's credit history and make a recommendation on whether the loan application should be approved."

The credit experts consider hundreds of applications, and each requires a detailed review and analysis. Dawkins estimates that one person working on just one application using pencil, paper, and calculator took more than an hour. Of course, if an analyst made an error, he had to start all over again.

Now, using the Apple III network configuration, analysts have a much easier time. Credit files on all customers are maintained on the 33-megabyte database disk. When a company asks for a loan, the analyst simply keys in that firm's code, and its entire credit history appears on the Apple's screen. Using special software, the analyst completes the whole process in less than ten minutes.

"Obviously, the time savings and the improvement in accuracy are key benefits of the networking system," Dawkins says, "but what I see as the major value of the network is the fact that all of our analysts are now able to share information that they didn't have access to before. That's a real plus."

#### Truck Components

The same communications aspect of networking appealed to John Horne, finance manager of Rockwell International's automotive-division headquar-

**'Obviously, the time savings and the improvement in accuracy are key benefits.'**

ters in Troy, Michigan. A \$2 billion business that manufactures components for heavy trucks, the automotive division employs more than 5000 people, 600 of them in Troy.

"The need for communicating financial information quickly and accurately among our people is of primary importance to this division," Horne emphasizes. "Profits, losses, balances, fore-

casts—they've all got to be kept up on a daily basis, and a lot of people must have access to the figures at any time during the day."

Before a Nestar network was installed with 15 Apple IIIs (as well as

**'Communicating financial information quickly and accurately among our people is of primary importance.'**

several IBM Personal Computers) and 137 megabytes in hard-disk storage in July 1983, employees communicated all financial data throughout the company on paper.

"We had access to the company's mainframe-computer database, which contains all information pertinent to the operation of Rockwell," Horne says, "but once an individual called up what he needed, the only way to communicate that information to another employee was through a written memo or report. That, as you can imagine, was extremely slow and often inaccurate."

It's the same old story: memos are lost, a page from a report is missing, information is miscommunicated.

"Now that our networking system is running, all areas within this division, from marketing to engineering to personnel, have access to the data they need," Horne says. "We download data from the mainframe onto the network's hard disk, so that anyone who needs it can retrieve it instantly. That information, in turn, can be uploaded to floppies to be used with VisiCalc or Lotus 1-2-3."

Horne is so pleased with the network's performance that he plans to expand the system to provide computers on at least 80% of the employees' desks. To handle such a large network, the division will eventually use about five gigabytes of mass storage, he estimates. That will permit not only file transfer and electronic mail, but also word processing, accounting, and other desired functions.

"Networking can make any office more efficient and productive," Horne concludes. "Anyone who could benefit by this and isn't taking advantage of it is making a mistake." +

# of learning with its G. Willikers\* Software

## Programs youngsters love to learn from

Society For Visual Education, Inc. (SVE) courseware is used by educators throughout the country. And our new G. Willikers learn-at-home software can help Apple-oriented youngsters get a fun-filled edge on learning faster and better. Interactive "how-to" programs direct youngsters . . . tell them when they're right or wrong . . . and why. If superior, enjoyable learning is a goal for the apple of your eye, start with these 6 new programs:

### Zandar the Wizard

Zandar the Wizard has a secret clue. He challenges youngsters to find it. While they're having fun, they're learning to form and test hypotheses—building reasoning skills as they eliminate false clues to Zandar's secret.

In Zandar the Wizard (disk 1) players interact with the computer and are guided through the hypothesis testing strategy. In Zandar the Jr. Wizard (disk 2) they logically work out Zandar's secret on their own . . . without help or hints from the computer. How-to-think games that pay off for every school subject.  
For ages 5 to 11

### Zandar the Wizard (HL71672-CP)

A 2-disk program for Apple II + 3.3  
DOS, 48K \$79.90

### BASIC for Beginners

. . . or how to learn microcomputer programming—independently! Well-defined instructional sequences introduce sound and disciplined programming habits from the start. BASIC commands are presented first by explanation. Next, youngsters copy a program and finally write their own programs. Interactive software is always there to help, to correct, to teach.

For ages 9 to 11

### BASIC for Beginners (HL20136-CP)

A 2-disk program for Apple II + /Ile 3.3  
DOS, 48K \$79.90

Get the best for your youngsters

### Letter and Number Key Adventures of the Lollipop Dragon

Welcome to the keyboard neighborhood! The Lollipop Dragon shows youngsters around the keyboard . . . and takes away some of beginning users' frustration at the same time. Games like *Meteor Math* and *Animal Soup* let kids' fingers fly.  
For ages 5-8

### Letter and Number Key Adventures of the Lollipop Dragon (HL106-1CP)

A 1-disk program for Apple II + /Ile 3.3  
DOS, 48K \$39.95

### Plotting and Programming Adventures of the Lollipop Dragon

For years the Lollipop Dragon has been in America's schools helping children learn everything from good behavior to math. Here he introduces plotting on the computer grid and simple programming commands. Three fun-packed games follow so that kids can use their plotting and programming skills right away.  
For ages 5-8

### Plotting and Programming Adventures of the Lollipop Dragon (HL106-4CP)

A 1-disk program for Apple II + /Ile 3.3  
DOS, 48K \$39.95

### Guinness World Records Math: Addition

The world famous *Guinness Book of World Records*, favorite of children and adults alike, puts zing into this math program. Incredible Guinness facts and feats make learning and practicing addition fun. Do the problems right and free the Guinness World Record holders from the clutches of the evil Space Grogs!  
For ages 7-10

### Guinness World Records Math: Addition (HL20032-CP)

A 1-disk program for Apple II + /Ile 3.3  
DOS, 48K \$39.95

### Guinness World Records Math: Subtraction

More Guinness fun as youngsters search for—what else?—the world's largest diamond. Kids use subtraction skills to find the diamond and capture Subtracto, the villain. It's great fun and great learning.  
For ages 7-10

### Guinness World Records Math: Subtraction (HL20034-CP)

A 1-disk program for Apple II + /Ile 3.3  
DOS, 48K \$39.95

# PFS:FILE AND PFS:REPORT

These information-management programs improve your record keeping.

## Software Publishing Corporation

1901 Landings Drive  
Mountain View, CA 94043  
(415) 962-8910

**List Price:** \$125 each for the Apple II, II Plus, and IIe; \$125 for PFS:Report and \$175 for PFS:File for the Apple III

**Requires:** Apple II, II Plus, or IIe (IIe recommended); 64K RAM; 80-column card recommended; two disk drives

If you have a lot of information to manage and records to keep and are thinking about using your Apple computer to help you organize and analyze your information, you will need information-management/record-keeping software. PFS:File and PFS:Report comprise a solid information-management system that is easy to learn and use, practical, and flexible.

With PFS:File, you design and manage files that organize your information for efficient storage and easy retrieval. With PFS:Report, you design and print reports that summarize your information in a tabular format for easy analysis. With both products, you can organize, manage, and analyze information to suit your current and future needs.

PFS:File communicates its practical and simple nature right from the start with its readable documentation. Truly a "users'" manual, it stands out as a model of an organized, thorough, and understandable document. A tutorial as

well as a reference guide, it is replete with examples to follow; you learn by reading about and using PFS:File's functions step by step. Since you direct the program through menus, you don't have to suffer through tedious rote learning. In less than 30 minutes, I read through the introduction and the first two chapters, followed an example to design a file, and began adding information to it.

► **PFS:File and PFS:Report comprise a solid information-management system that is easy to learn and use, practical, and flexible.**

To PFS:File a file has a specific format, called a "form," with its contents, called "items," in a set order. When you design your form, you get a clean screen for arranging your items. First, don't worry about wasting valuable space on your diskette, because PFS:File efficiently stores your form and information. You can name your items as descriptively as you like, and you can be liberal with the amount of space you allow for your entries. Consider the form's layout; you use your form to add

information to your file, so layout is important. PFS:File does have two constraints that affect retrieval speed and printing that you should consider when you arrange items on your form.

For optimal retrieval speed, the first item on your form must be the one on which you will base your searches most frequently—last name, employee number, or date, for instance. This item is called the search key, and you get only one. You can also search your file based on any of the other items it contains, in any combination you require—it just isn't as fast as using the search key.

When you print with PFS:File (as opposed to printing with PFS:Report), you must consider printing order. Although you can print any or all of the items in your form, you cannot print them out of their set order. For instance, you can choose to print only item 1 and item 4, but item 4 cannot print before item 1. This restriction is beneficial if you plan to print mailing labels or lists that require a certain order to make the most sense.

If you are wondering about a form's maximum size limits, you needn't be concerned. At 100 items per page and 32 pages per form, the size falls into my "unlimited" category; you are unlikely to fill any form's capacity. The two real form-design constraints are insignificant—this program provides excellent flexibility.

## Fill in the Blanks

Adding information to your forms is as easy as filling in blanks, because that is exactly what you do. With a copy of your form on the computer screen, you type in your entries. Entering dates or numbers poses the only nuisance, but only if you intend to sort forms chronologically or in numerical order.

Instead of entering dates as "dy/mo/yr" or "mo/dy/yr" (depending on your roots), you must enter dates as "yr/mo/dy," and you have to use two digits in each part. For example, you enter January 2, 1984, as 84/01/02. In PFS:File's numbering system, 19 is less than 2, and 19 is greater than 119. To put these numbers in order, you must enter them as 002, 019, 119.

When you add information to your

forms, PFS:File tells you the name of your file, the number of the form you are working on, the page number in the form, and how full your file is. File capacity depends on the number of items and pages in your form and the size of each item's actual entry. As a point of reference, a typical mailing-label file runs about 500 forms per diskette. The manual clearly explains storage calculations.

#### Search, Retrieve, and Print

From your stored file, you can search for and retrieve forms for reviewing, removing, updating, copying, or printing. PFS:File's method of describing forms for retrieval is practical and simple, while still providing most of the basics for a versatile search. You receive a copy of your form, and on it you can describe the characteristics of an item, or multiple items, that PFS:File will search for to qualify forms for retrieval. Think of searching as a game of finding certain attributes—"Find all my forms for the month of November through December that have the budget category *gift*." You can choose from full item matches, partial item matches, numeric matches (greater than, less than, or equal to), and numeric-range matches. Additionally, you can apply a "not" match qualifier to any of the

choices.

One search feature that PFS:File does not provide is the ability to qualify items with an "or" condition. For example, you can't say, "Find all my forms that have the budget category *gift* 'or' *miscellaneous*." In other words, you cannot describe a single item in more than one way. When you describe two or more items on your

▶ **By copying selected forms, you can spread your file out onto several diskettes or merge forms onto a single diskette.**

form, a form has to match on all counts; if not, the program does not retrieve the form. Nevertheless, PFS:File does provide most of what you need for flexible form retrieval.

Printing, like form retrieval, is practical and simple. After you describe the form you want printed, PFS:File presents you with a copy of it. On the form, you can choose the items you want

printed. You have the option of printing with or without the item names, as well as printing one or more items per line. You can also designate one item as a sort item, albeit in ascending alphabetical or numerical order only. For repeated printing jobs, you can save up to eight print designs for subsequent use—a nice time saver. If you are not sure which forms you want to print, PFS:File lets you peruse all of them and choose certain ones.

#### Protection, Growth, and Change

PFS:File's Copy feature gives you the flexibility you need for file protection and growth. For file protection, you can copy an entire file to serve as a backup. If your diskette is full, you can copy a form's design to start another diskette. And, by copying selected forms, you can spread your file out onto several diskettes or merge forms onto a single diskette. The program protects you when you make requests that result in irreversible changes to a diskette, such as copying and removing forms, by asking whether or not you really want to proceed; you can change your mind before the program makes any changes.

Another more important facet of growth, the ability to change a file's form for future needs, is a must feature.

## INTROVOICE

### RESULTS — A SOUND AWAY

#### DESCRIPTION

IntroVoice I & II converts spoken words to commands or data. For use with any application program. Use furnished vocabularies or easily create your own with the supplied system software.

For Apple II®, Apple IIe® and Franklin®.

#### BENEFITS

- Increased task efficiency using voice and keystrokes.
- Reduces on-line data entry errors.
- Operates when hands or eyes are occupied.
- Learn functions, not complex keystrokes.
- No language barriers.
- Reduces software learning time.
- Typing skills not required.

#### APPLICATIONS

The VIM is designed to add voice input to ANY existing Apple II application:

- Data Input and Retrieval
- Education
- Business
- Industrial Automation
- Measurement, Inspection and Testing
- Aid for Handicapped

For ordering or technical support contact:

# Bridge the "applications" generation gap.

Bridge the gap between your needs and your Apple® with the "next generation" APPLI-CARDS™ from Personal Computer Products, Inc.

## CP/M APPLICATIONS WITH APPLI-CARD™

It doesn't matter one bit if you're in business, science or education, because the APPLI-CARD bridges the gap between you, your Apple, and the wonderful world of CP/M. The APPLI-CARD is a plug-in board with complete hardware and software which allows your Apple to run the thousands of CP/M application programs available today!

### Features:

- **Popular CP/M Applications** such as dBASEII, SuperCalc, and WordStar are now compatible on your Apple!
- **Powerful 6MHz Processor** to increase program execution speed by up to 3 times faster!
- **On-Card 64K RAM** which eliminates the older slower method of sharing the Apple's memory!
- **Run in the Apple 6502 Mode** use the APPLI-CARD memory for a high speed electronic disk drive!
- **80-Column Scrolling and 70 Column Hi-Res.** Two distinct operating modes for those who do not have 80-column video cards. APPLI-CARD will also support most popular 80-column video cards!
- **Compatibility** with the Apple II, II Plus, IIe, and Apple-compatible machines!
- **Expandability!** The APPLI-CARD will grow with your needs. Optional RAM Extenders add either 4K or 128K of additional memory. Use this extra memory with our APPLI-DISC™ software as a high speed electronic disk drive which in many instances eliminates the need for an expensive 1st or 3rd mechanical disk drive.

## APPLI-CARD FOR THE APPLE III WITH FREE WORDSTAR®

The "new generation" Z-80 card that not only opens the door to the thousands of CP/M application programs available, but turns your Apple III into an industry standard word processor. Make your Apple III a powerful CP/M computer!

### Features:

- **Package includes** a \$495 word processor, **WordStar, FREE!**
- **Compatibility** with other popular CP/M applications programs such as SuperCalc and dBASEII.
- **Speed, speed, speed!** The APPLI-CARD gives you a powerful 6MHz processor. Increase your program execution speed because your card will be twice as fast (or more) than other Z-80 cards!
- **On-board 64K-128K RAM!** The APPLI-CARD has 64K RAM standard, but you can add up to 128K any time your heart desires!
- **A true Apple SOS implementation.** The APPLI-CARD is fully compatible with your SOS environment!
- **Supports standard Apple III peripherals!** Use the Apple III interface and your APPLI-CARD is compatible with your favorite Apple III peripherals including the Profile Hard Disk System.
- **It grows on you!** The APPLI-CARD grows with your needs. A built-in expansion connector opens the door to various add-on products. Also, you can add new peripherals to your Apple III and your APPLI-CARD will use these through its sophisticated software design.

## THE 16-BIT MS-DOS™ "88CARD"™

Now you can upgrade your Apple II, II Plus or IIe to the speed and power of the large memory space of a 16-Bit System! Your Apple all of a sudden becomes a 16-bit microcomputer! The "88CARD" combines cutting edge hardware technology with the comfort and reliability of your Apple!

### Features:

- **The 88CARD Hardware includes** a fast and powerful 5MHz 8088 microprocessor and 64K of on-card memory. Add this to a 64K Apple to give a total of 128K for execution and development!
- **With the same 8088 Microprocessor** as the IBM® PC, you can run standard MS-DOS 16-bit software.
- **Increased storage space** for professional applications. The 88CARD offers a larger Data-Base storage capability for your software. Many applications have more than double the available working space with their 16-bit rather than in the 8-bit version.
- **Increase the efficiency** of your Apple, while increasing your productivity, and bring your Apple to the "Next Generation" 16-bit world.

CIRCLE 116 ON READER SERVICE CARD

Your form's initial design is unlikely to be perfect. You'll inevitably discover ways to improve your form, whether it be adding, deleting, or rearranging your items. PFS:File does the job by giving you a copy of your form to change to include your improvements. After you make your changes, PFS:File transfers your existing information to your newly designed form. One minor irritation is that PFS:File requires you to name an item identically on the new form if you want that item's entries to be included in the transfer—if you don't, no transfer.

### Reports, Information Summary

Besides managing information, the other main function of record keeping is summarizing the records you have so carefully kept. PFS:Report is a general-purpose report writer that summarizes your information in tabular (row and column) reports. PFS:Report performs all the basics that you need and

**You'll inevitably discover ways to improve your form, whether it be adding, deleting, or rearranging your items.**

expect from a report writer. As with PFS:File, you make your requests on menus. Additionally, PFS:Report's "personality" and manual obviously come from the same source as PFS:File, so learning PFS:Report is a comfortable experience.

Report printing begins with retrieving forms from your file. You select forms by describing the characteristics of items, just as with PFS:File. Next, you define your report on a copy of your form—sound familiar? But now, since the primary purpose of reporting is to summarize your information for analysis, you have different types, and a greater variety, of options.

With PFS:Report, you can include up to nine items, in any order, on a report. The first two items are considered sort items (ascending only). To analyze your figures, you can request totals, subtotals, averages, subaverages, counts, and subcounts. Requests can even be in combination, as in "Subtotal

and subaverage each employee's commission." You can create new items, including running totals, that the program calculates arithmetically from existing numeric items. Also among the print options is the ability to predefine and keep up to eight reports that you use on a regular basis. Of course, you can change, remove, or add new reports as your needs dictate.

### PFS: Solutions

For those of you who prefer to buy as much help as possible, Software Publishing offers PFS:Solutions, a set of predesigned forms that go with PFS:File and PFS:Report. So far, 12 Solutions are available: Stock\$, Home Budget, Disk Library, Home Inventory, Mail List, Employee, Payroll, Ledger, Invoices, Inventory, Checks, and Ticker. You can use them right off the shelf or enhance them as you please. Either way, PFS:Solutions can give you information management with a minimum amount of effort on your part.

I gave the Home Budget solution a try. I needed only 30 minutes to enter 52 forms, a month's worth of financial transactions. These forms took up only 5% of the diskette. Simple reckoning tells me that I could organize my budget by entering my transactions once a week, at less than ten minutes a sitting, and a year's worth of budget would easily fit on one diskette.

Home Budget's four reports fulfill the requirements for monitoring and maintaining a budget. You can tally all your tax-deductible expenses, help balance your checkbook, and list a running account of expenses by date and/or budget category.

PFS:File can work with two other products from Software Publishing: PFS:Write, a word-processing program, and PFS:Graph, a graph generator. With either, you can retrieve information from your PFS:File forms to use in text and graphs.

### Summary

PFS:File and PFS:Report are information-management tools that give you all the benefits of computerized record keeping and reporting in a package that is practical, flexible, and simple to use. Its sustained popularity attests to its usefulness. You design files to fit your current needs with the assurance that your files can grow and change. You can print reports that clearly summarize your information for easy analysis.

If you want to use your Apple to help you organize, manage, and analyze information, then you should seriously consider PFS:File and PFS:Report. **+**

# NOAH WEBSTER, MEET YOUR MATCH.

A few months ago, Jennifer would rather go to the dentist than do her spelling homework.

Then Mom bought *Crypto Cube*™ by DesignWare.™ Now Jennifer has become an absolute word fiend.

She started off working her way through the many three-dimensional word puzzles that come with the game. Then, she entered her own spelling homework into the program to create new puzzles.

Now, Jennifer's making up word puzzles to stump her parents!

"Don't look at the keyboard!" Remember when your typing teacher barked this at you as you were first learning to type? Unfortunately, this rule is hard to follow when you're using a computer keyboard, since it has keys we never used in typing class—Escape, Repeat, Control, and Reset,

EPS KB-A3

KEY TRONIC KB200

for example. If you have an alternate keyboard with a numeric keypad and special-function keys, looking at the keyboard becomes a necessity.

We are going to take a look at four interesting keyboard options for Apple II, II Plus, and IIe computers: Key Tronic KB200, Preh

Commander, Executive Peripheral Systems (EPS) KB-A3, and the Keywiz VIP. Although these four represent only a sample of the keyboards available today, they are a good cross section of the less-expensive options.

Why should you be interested in alternate key-

boards? If you are unhappy with your present keyboard, you have one reason. Most of the keyboard designs we'll look at are fancy replacements for your Apple keyboard. If you want to enhance your present keyboard with programmable keys, you have another reason to be interested in alter-

# FOR DIFFERENT FOLKS

natives. One of the keyboards that follows gives you programmable keys without replacing your present keyboard.

The "touch" of the keys is another important factor for some people. The keys on the Apple II, II Plus, and IIe feel the same as you push the key through its "full travel" (the full key-stroke). In contrast, some

of the keyboards we'll examine have a touch with a "two-tone" quality. As you depress the keys, the feel changes before you reach the end of the key's movement. The idea is to give you "tactile feedback" so that you don't have to push the key through the full travel.

All the keyboards I tried had the advantage of a de-

detachable keyboard with a "lower profile" than that of the Apple II family. Most typists find the lower keyboard height comfortable, since they bend their wrists less while typing. Even though it may seem fun to type in your lap, you may run into a space crunch if you opt for a detached keyboard, since it replaces your present keyboard functional-

ly, not physically. You'll end up with an overcrowded desk if you don't think of somewhere to put your old Apple keyboard (and attached computer).

## The Key Tronic KB200

When IBM introduced its streamlined Personal Computer keyboard, many PC owners were disappointed with some of its features, such as its loud click with each keystroke and the location of some crucial keys. The Key Tronic keyboard was originally a response to the disenchantment with the IBM PC keyboard's shortcomings. As a result, the Key Tronic design for both the IBM and the Apple II and II Plus—it is not available for the IIe—reflects the PC keyboard's style, with certain improvements in the areas of greatest dissatisfaction.

The touch of the Key Tronic KB200 keys makes for efficient and quiet typing, and their color-function coordination helps you find the right key in a hurry. When you depress the keys halfway, their touch suddenly changes from a soft, springy feel to a firmer "foam" feel. Although this change is a "positive tactile response," some users claim that the Key Tronic keyboard feels a little too mushy. I found that the keys' touch helped me type faster, because I didn't have to depress the keys fully to receive tactile feedback.

Comfort is obviously a high priority at Key Tronic. The low profile of the keyboard's home-row keys (30 millimeters above the desk-

PREH COMMANDER

KEYWIZ VIP

top) reduces the fatigue associated with bending your wrists. Collapsible feet in the rear of the keyboard can tip its angle further toward you. Either way, the keyboard remains low enough that you can easily slip a floppy disk into a disk drive that is sitting right behind the keyboard. A long, spiral, flexible cord attaches the keyboard to the computer and allows you to type from up to eight feet away.

The numeric keypad increases your productivity on spreadsheet and similar data-entry programs. Although most al-

## ► Comfort is obviously a high priority at Key Tronic.

ternate keyboards have this feature, the KB200 has a few extras that come in handy: Enter, +, -, and Home. You can also use the numeric keypad to move the cursor in four directions by holding down the conveniently located second Control key (on the right side of the space bar) and pressing 2, 4, 6, or 8. Watch out, though—the Reset button is also in this area. One accidental keystroke when you are controlling the cursor here, and good-bye to your unsaved work!

A special-function keypad stands at the left of the other Key Tronic keys. Probably a carryover from the IBM PC function keys with the same setup, this keypad holds almost exclusively nonprogrammable BASIC/DOS commands: Boot (PR#6 or PR#7 if shifted), Load, Run, Save, Delete, Catalog, List, Clear to End of Line, Delete Line, and Stop (Control-C). Remember that these commands generally aren't useful in commercial software programs (unless those programs drop you back into DOS). Unfortunately, the Load, Save, and Delete keys don't produce a space after the command. I had to remember every time to type the space before I typed the filename.

### The Preh Commander

The German-made Preh Commander keyboard has a wonderful "two-tone" touch to it and a flat, slim look. If touch is the most important factor in your decision to purchase a new keyboard, this keyboard may be for you. A price tag of just over \$200 makes it hard to beat.

Like the Key Tronic, the Preh stands only 30 millimeters high at the home row. Disk drives immediately behind it are easy to get to, and you'll rarely suffer from weary wrists with this keyboard. Its injection-molded plastic construction

makes for an unusually light keyboard.

Since it has such a nice feel and low profile, you'd think this keyboard would help you move along at top speed with little effort. Well, maybe. As a European company, Preh opted for the ASCII keyboard layout rather than the traditional typewriter layout. The ASCII layout exists on the Apple II and II Plus and is usually less popular in the U.S. than the standard arrangement of the Apple IIe or of IBM Selectric typewriters.

Second, the flat design eliminates the tiered key rows most of us are used to, as well as some of the contouring of the keys to your fingers. I found it harder to keep my fingers on the home-row keys and easier to overshoot keys on other rows.

What's more, the nubs most keyboard manufacturers include on home-row keys (so that you can easily locate the right key) are lacking on the Preh, where they would certainly help (actually, a bead of Elmer's glue on several chosen keys would probably suffice). One other aspect of the keyboard that can inhibit blinding speed is its two-key rollover, meaning the keyboard can handle no more than two keys down at a time. So if you type fast, watch out! You might lose a character here and there.

The numeric keypad is a separate group of keys bordered by five cursor-control keys and three S function keys. Added to the four standard cursor directions is a Home key labeled with a diagonal arrow. Unfortunately, a Return must follow this Home key before you can go home again. Backspacing is even more fun: I couldn't find a backspace key. Since the key to move the cursor left is located on the far right of the numeric keypad, I began to wish my right pinkie were much longer, whenever I made a typo.

The several S keys bordering the top of the numeric keypad are simply more function keys that didn't fit with the others along the bottom of the main ASCII keyboard. The function keys along the main keyboard are F1-F7 and S1-S3 along the numeric keypad. The commands are such favorites as Save, Load, PR#6, Catalog, List, Run, INIT, Call-151, PR#1, and DIR. I'm not sure why the function keys were not labeled with these DOS commands; neither do I know what makes S commands different from F commands. Remember, however, that these keys aren't much help in most of the commercial software you will use.

The subtle convenience of a space added to the file commands (such as Run and Save) on the function keys is a nice

touch, but the Call-151, PR#1, and PR#6 commands act immediately when you press those function keys. The lack of mnemonic labels on these keys, as well as their proximity to the strike zone of alphanumeric keys, can make them potential land mines for your careless fingers.

How about the instructions? If you read German, you may get more out of them than I did. Although it comes with English translations, the documentation tended to make the installation sound more difficult than it was. At first I thought I needed to be a skilled electronics technician, but I later realized that the skilled work had already been done, and I simply needed to plug the keyboard in.

### The EPS KB-A3

EPS can truly claim that it makes this keyboard with the business executive in mind. It has enough keys to make almost any keyboard connoisseur happy, but it also makes for fewer keystrokes and less head scratching when you use commercial software. The large selection of keys and functions makes for a big keyboard, measuring 20 x 9 inches and 50 millimeters in height to the home-row keys. This height puts the keyboard about halfway between the 30-millimeter keyboards we saw earlier and the height of the keyboards in the Apple II line. The EPS keyboard connects to your Apple with a six-foot-long spiral (telephone-like) cord, making it easy to move the board around.

The functional keypads on the EPS keyboard are its best feature. It has five

## ► EPS can truly claim that it makes this keyboard with the business executive in mind.

distinct keypads: (1) standard "QWERTY" typewriter keys, (2) enhanced numeric keypad, (3) selected edit keys, (4) cursor-control keys, and (5) programmed-function keys. With all these options, the KB-A3 almost demands of you, "Look at the keyboard!"

Even if you can refrain from looking at the standard typewriter keys while typing, the numeric keypad will attract your attention. In addition to the usual ten digits, decimal point, and comma, it includes single keys for entering multiple zeros, skipping to the right, back-

# How to make your Apple run 3½ times faster.

## Just plug in the Accelerator IIe™ and watch your Apple® II, II Plus or IIe take off.

Imagine running VisiCalc®, DB Master®, Applesoft, Apple Fortran or Pascal without long delays. With the Titan Accelerator IIe, your Apple II, II Plus or IIe runs these programs a true 3½ times faster. The Accelerator IIe also runs your Franklin, Basis and other Apple II compatibles 3½ times faster. This faster computer response time means less waiting for you and an increase in your productivity.

This Titan exclusive has its own fast 6502 processor, 64K of high-speed memory, and built-in fast language card. It is transparent to your software and is hardware compatible with most standard peripherals. And you can turn it off from the keyboard to run your Apple at regular speed.

Find out how to run faster and increase your productivity without breathing hard. For information on the Accelerator IIe and other Titan products, see your computer dealer or contact:

# ANNOUNCING

A LIBRARY OF SOFTWARE PROGRAMS FOR **APPLE II & IIe** COMPUTERS

# A+DISK

M A G A Z I N E

Now you can build a library of programs for your Apple™ at a fraction of the usual cost

Each issue of A+ Disk Magazine provides you with up to 10 programs for as little as \$2.00 each.

A+ DISK MAGAZINE is making it easier than ever before to build a library of computer software for your Apple II Microcomputer. Because now you can save 34% on the programs you need to expand the use of your personal computer. Issue after issue, A+ DISK MAGAZINE gives you business and

finance aids, utilities, subroutines, games, home and personal applications... all for as little as \$2 per program.

And when you consider that many of today's most popular programs sell for \$50, \$60, \$80 and more, your savings can be *enormous*... much more than the cost of your subscription to A+ DISK MAGAZINE.

Along with your subscription to A+ DISK MAGAZINE, you'll receive

up to 10 thoroughly-tested, ready-to-run programs and files on a floppy disk. Complete with comprehensive, illustrated User Manual, **A+ DISK MAGAZINE** is easy, efficient, and very economical.

Here's just a sampling of what you can expect in every issue:

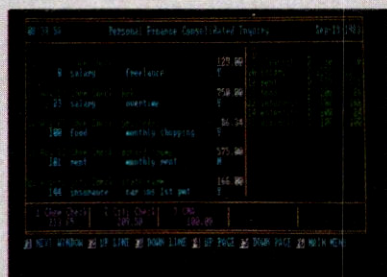

**Programming tools:** Create cross-reference listings for your

BASIC programs. Convert MBASIC™ program files to CBASIC™ format or reverse. Use your text editor on your BASIC programs. Convert data between BASIC and VISICALC® formats.

**Business and finance aids:** Compute loan payment tables. Calculate the Present Value and Internal Rate of Return for your investments. VISICALC templates for Real Estate, Lease/Purchase and Tax Shelter analysis. Create advanced pie, bar and line chart graphics.

**Home/personal applications:** Whether you need your own income tax return helper... a personal cash flow analyzer... a speed reading trainer... proven ways to maintain a mailing list... or SAT test preparation aids, **A+ DISK MAGAZINE** has it all.

**Utilities and diagnostics:** **A+ DISK MAGAZINE** shows you how to use your Apple to simulate a conversational terminal with function key control of disk or printer logging... print graphics, screen images on your printer...

backup, copy, delete, un-delete or type files with simple menu commands... plus more.

**Data files:** From tax tables, to population statistics, from dictionaries to economic times series, **A+ DISK MAGAZINE** involves you as never before.

**Games:** Adventures! Strategies! Test your skill, intelligence and luck.

**The latest software developments at your fingertips for a fraction of the cost.**

There's no need to type listings into your computer. With **A+ DISK MAGAZINE**, all you do is boot the disk and go! The accompanying User Manual explains everything in clear, easy-to-understand terms. So you'll be able to run the programs as soon as you receive your first issue of **A+ DISK MAGAZINE**.

**Subscribe to A+Disk Magazine and save up to 34%—\$60 off with this Introductory Offer!**

P.O. Box 2469  
Boulder, Colorado 80322

**YES** Please accept my subscription to **A+ DISK MAGAZINE** for:

- 1 issue for \$29.95
- 3 issues for \$69. I SAVE \$20.00!
- 6 issues for \$119. I SAVE \$60.00!

**MAIL NO-RISK COUPON TODAY—AND SAVE UP TO 34%!**

Canadian and foreign orders shipped via air printed matter only; add \$5 per issue and include payment, with order, in U.S. funds.

**Program Submissions**

If you wish to submit a program for inclusion in future issues, please write to: **A+ DISK MAGAZINE**, Attn: Editor, One Park Avenue—Dept. 732, New York, N.Y. 10016.

**Guarantee**

- All programs are fully tested and guaranteed to run. Damaged or faulty disks will be replaced at no charge.
- If you wish to cancel a subscription, simply return the most recent disk in its sealed package and you will receive a full refund for this copy and all unmailed issues.

**Product Specifications**

Programs will run on Apple II computers using Apple DOS 3.3 and require a minimum of 64K. Most programs will be written in Apple-soft Basic—however some machine language code may be used.

Most programs will be written to run on both monochrome and color displays; however, some games and utilities may be specifically developed for color displays.

Programs and documentation are copyrighted by Ziff-Davis Publishing Company. All rights of reproduction in all forms and media strictly reserved.

CIRCLE 321 ON READER SERVICE CARD

spacing to the left, and entering any of the four basic arithmetic operations. Spreadsheet users will love it!

The selected edit keys and cursor-control keys each have their own separate locations. The edit group dedicates its six keys to character deletion and insertion, line deletion and insertion, and the Search and Replace commands. The cursor-control group, also six keys, gives you efficient control of all cursor directions. The last two keys in the group move the cursor left or right at a faster-than-usual speed.

Executives will undoubtedly appreciate the programmed-function keys, called "promware" keys, the most. These keys have nothing to do with attire for waltzing and fox-trotting—no, they are simply keys fitted with templates and memory to make them handy for many specific software packages. The promware itself is a  $1 \times 1 \times \frac{1}{2}$ -inch memory module that plugs into the top of the EPS keyboard. The module makes the keys "smart" so that they can fulfill different software commands, corresponding to

▶ **The module makes the keys 'smart' so that they can fulfill different software commands.**

the software program you buy. A template or mask that fits around the keys comes with each promware module to label the keys' new functions. Although you still must own the software and know how to use it, the promware will help you get by without memorizing all the specific commands. You can buy EPS promware for BASIC/DOS, Visi-Calc, WordStar, and many other applications for \$29.95 each.

The EPS keyboard instructions are clear and complete, a nice change from the norm for most technical hardware, but they are not bound. Before you decide to read them or any of the EPS promware instructions, make sure you have purchased a nine-inch, three-ring binder for them. Otherwise, you will no doubt find yourself playing "52-card pickup" with the pages, time and again.

One disadvantage of the EPS KB-A3 is that each piece of commercial software you buy requires the appropriate additional promware from EPS (at \$29.95) to keep your keyboard in tune

with the latest programs. If you are a busy executive without the time to remember all the commands for your commercial programs, you may decide that the extra memory jog of the promware keys and the reduced typing requirements are worth the occasional expenditures.

#### The Keywiz VIP

If you don't mind spending time programming your keyboard and can afford a higher initial cost, the Keywiz VIP may be more your style. Unlike the other boards we have looked at, the Keywiz enhances your present Apple keyboard instead of replacing it. Although the Keywiz sits in its own separate box, it's like adding 31 special-function keys to your Apple and having them do whatever you want—each one, in combination with the Shift key (two choices) and the mode-selection key (four choices), can produce up to eight functions. Actually, since each key has eight modes, it's more like having 248 function keys. Although the keyboard does not do anything else, that's quite a bit of flexibility and power at your fingertips.

Consider that each key can potentially hold several commands. Menu-driven programs such as WordStar can be less tedious if one keystroke takes the computer screen through several menus. In addition, you can customize the keys to issue commands to any software you wish, with the commands recorded alongside the keys on do-it-yourself templates. You can even make some of the keys a numeric keypad in one mode and still have other modes in which to program those same keys with different functions. With 248 functions, you can use the Keywiz to command many different software programs (depending on how you allocate your Keywiz keys).

How easy is it to program the VIP? It couldn't be any easier, even for nonprogrammers. You just use your regular Apple keyboard to type in the Keywiz keys' new functions. Until you reprogram the keys, they will hold on to the phrase you typed in—power on or off.

The touch of the keys is nothing to get overly excited about, though. Then again, you don't type from the Keywiz keyboard; rather, you command from it. I was disappointed with one imperfection on my Keywiz VIP, and that was a Shift key that tended to stick. Unfortunately, this stickiness made the shift key act more like a Shift Lock key!

The key box is shorter than the usual keyboard, yet it has large keys and is 50 millimeters high. Although the stiff cord connecting the Keywiz to my Apple was

# THEY KNOW THEIR BUSINESS

"One of those products that come into the software marketplace unannounced, break new ground, establish new expectations for users and set new standards for all that follow."

**FAMILY COMPUTING**

"... your screen becomes a dynamic arena for your ideas ... part of the new generation of software that fully develops the microcomputer's abilities."

**INFOWORLD**

"By getting your ideas down quickly onto the video screen, they become objects to manipulate, cross-connect, redefine and examine."

**PM SOFTWARE**

"For many people, it will prove a reason in itself to own a personal computer."

**PM SOFTWARE**

"The great thing about this program is that it helps you let your ideas flow freely, because you know that you can organize them later."

**SOFTALK**

"The idea behind this product is that the easier it is to process ideas, the quicker and more effortlessly those ideas will come."

**CREATIVE COMPUTING**

"ThinkTank is so easy to use, and so relatively errorproof that even a first-timer feels as if he's in charge of the computer ... and being in charge of the computer is what enables you to do with it things you may never have thought of doing before."

**NEW YORK TIMES**

"ThinkTank allows you to think the way you would naturally ..."

**PERSONAL COMPUTING**

Our business is outlines. ThinkTank creates, displays, prints, searches and sorts outlines and text at your command. Spread sheet programs made personal computers useful for financial analysis. ThinkTank makes the computer a tool for strategizing, planning

or just plain thinking. Get organized and stay organized—it is easy the ThinkTank way.

## APPLE-CAT™ II

A communication system you grow into, not out of.

For the Apple II, II+, IIe and Franklin ACE™ computers.

The Cat System lets you slip something into your computer no other modem offers—a complete range of speeds from 110,300 and 202 half-duplex—to full duplex 1200 baud. All using state-of-the-art LSI.

It's a two card system. So you can start with a 300 baud single card, then move up to 1200 baud with a second card at any time—with absolutely no compromises in quality.

### Com-Ware™ software included.

Five minutes after you boot up, you'll have a good notion of what it's like to work with the most accurate, convenient communication system designed for your Apple.

It makes all the right moves you need to work with another computer, swap programs, access data, whatever.

Included: a time-saving directory of 26 telephone numbers with terminal configurations all selected and stored for auto dialing. Handy.

And it's all simple to operate. Just follow the menu. No programming. No fussing. It's all there.

**They're at your dealers.**

No waiting. He has them right now along with all the details. See him today and you can be on-line tonight.

CIRCLE 231 ON READER SERVICE CARD

NOVATION

only two feet long, I found a perfect location for the key box that needed even less cord. By pushing the Apple monitor back on the computer case and raising the CRT onto a couple of books, I made an accessible place for the programmable-function keys between my old keyboard and the monitor. What's more, the color of the Keywiz VIP case matches the color of my Apple components, giving the system the look of an integrated setup.

I was not thrilled with the installation procedure for the Keywiz VIP. I knew I was in trouble when the plug that was supposed to go into my Apple motherboard did not match the one pictured in the instructions. I was able to get around the problem by "jumpering" a few of the plugs' leads. I hope that my Keywiz VIP was the only fluke that slipped through the manufacturer's quality control. Although the instructions on how to operate the Keywiz are good, the instructions on how to install it should be rewritten. The latter seem to be in an incorrect order and are a bit confusing.

**Frequent Apple II or II Plus users stand to gain more from a new keyboard.**

Reviewing how you spend your time with your Apple will tell you in some ways whether you should even bother looking at other keyboards. Do you use your machine to type an occasional letter, balance your checkbook, play some games, and learn programming? Or are you already a heavy user of word-processing or spreadsheet programs, with which the touch of the keys or a numeric keypad is important?

The kind of equipment you already own can make a difference in the value of an alternate keyboard. Frequent Apple II or II Plus users stand to gain more from a new keyboard than frequent Apple IIe users. This distinction is especially true if you own a II or II Plus and have already invested in an 80-column card with uppercase and lowercase characters and in an expanded-memory card so that you can run good-quality word-processing and spreadsheet software. Apple IIe users have keyboards with features such as Caps Lock, auto-repeat, and up- and down-cursor keys and will thus have to look harder at their needs to decide if a fancier keyboard can earn its

keep.

The instruction manual is one area in which all four packages could improve. For example, keep in mind that "pin 1" of a chip or plug is usually the one with the ink dot next to it. All four manuals failed to mention this fact—something you need to know if you install the keyboard yourself. The moral of the story for any hardware installation is simply to read all the instructions first, think about what you are going to do before you do it, and remember that pins on chips and plugs can and do break. If you're in

doubt, consult the company or your dealer first.

To decide whether to buy an alternate keyboard and to choose among the options, try to match your needs and budget with your purchase. Our sampling of alternate keyboards shows that the freedom to customize the keyboard seems to increase with price. Be aware, however, that keeping track of all those changing keys will pull your eyes toward the keyboard. Luckily, your old typing teacher won't be around to bark at you! **+**

**"We will match any mail order price in this issue."**

# Don't buy a spreadsheet

A lot of electronic spreadsheets can't cover your needs. They just don't go far enough.

They can't adapt to the way you think. They speak in hieroglyphics (/GF\$, /R, /S#S), instead of English.

Time for Microsoft® Multiplan®, the high energy spread. Software that's rich with understanding. Full of high performance capabilities for Apple® II, III or Macintosh.™

**Multiplan**  
loves you as you are.

Other spreadsheets force you to learn how they think. Multiplan learns how you think. It remembers the way you work. Anticipates frequent commands. Even offers suggestions on spreadsheet set-up.

Multiplan not only uses English commands, it allows you to create formulas in English. Instead of typing mysterious coordinates like H54-L73 = BK154, you can simply name worksheet areas: Sales - Costs = Profit.

Multiplan can link data in different spreadsheets. Make a change on one, and every related one is changed.

# that spreads too thin.

And if you have been working with VisiCalc®, Multiplan can read its data files and teach it new tricks. Like how to set up variable column widths and sort data.

## The wish list.

Only Multiplan has optional Multiplan Application Programs that work with **MICROSOFT**® you to design and build custom spreadsheets for Budget Analysis or Financial Statement Analysis in minutes. Not hours.

Not days.

Small wonder Microsoft gets more performance out of a spreadsheet. We designed the MS™ DOS operating system that tells the IBM® PC how to think. And our BASIC is the language spoken by nine out of ten micro-computers worldwide.

To get the best spread call 800-426-9400 (in Washington State call 206-828-8088) for your nearest Microsoft dealer. Now featuring Multiplan at a reduced price: **\$195.**

# THE ROBOTS ARE COMING

## WHY NOT INTRODUCE ONE TO YOUR APPLE?

Meet Humphrey, your favorite advanced personal home robot. Humphrey is almost human. He's sophisticated, efficient, and opinionated. In fact, he's almost a member of the family.

The year is 2081. You've just arrived home in Canton, Ohio, after a long and arduous trip to the moon colony Argenta. Humphrey greets you at the door. "Hello. Welcome back. Was your trip a good one? I bet you're tired. Would you like a drink, a bath, or dinner?"

"All of the above, Humphrey," you answer. "I've had a really rough trip. Where is everybody?"

Humphrey is wonderful isn't he? Humphrey does windows, and he takes care of rings around collars and bathtubs. In the summer he mows the lawn, and in the winter he clears away the accumulated snow. When he's not replacing lightbulbs or repairing the toaster, TV set, or boiler, Humphrey sees that meals are planned, cooked, and

served with style, and the mess afterward dispatched with aplomb.

This vision of our robotic tomorrow is adapted from a book written by the well-known futurist Gerard O'Neill. In his book *2081, A Hopeful View of the*

*Human Future*, O'Neill predicts that robots will be an indispensable part of everyone's lives 100 years from now.

B U S A C C A

GOOD  
MORNING

### What of the Present?

If you want a robot like Humphrey for your very own today, how close can you come? In 1984 you can get a lot closer than you think, if you have an Apple, a standard interface, and the patience for imaginative programming. One company, in fact, encourages software authors to invent marketable robotic programs. RB Robot, of Golden, Colorado, offers a 12% royalty on the list price of robotic software it accepts for marketing, along with a 25% refund on the price of your robot as extra inducement.

Although robotics today is still in its infancy, many in the field expect a spurt in the development of personal home robots any time now—1984 could be the year. If you want to join the robot revolution, you might begin experimenting with the RB Robot RB5X (X stands for experimental). By interfacing it with your Apple, you can begin to use and adapt commercially written software or, if you're ambitious, develop your own.

### ▶ Many in the field expect a spurt in the development of personal home robots.

Starting is a snap. You need a communications card and communications software for your Apple. A standard RS-232 cable introduces the computer to the robot, and you're ready to roll. Essentially, you use your computer as an intelligent terminal.

RB5X speaks Tiny BASIC, a subset of BASIC, through an interpreter on a chip embedded in the robot. With the Apple II Plus and the Apple IIe, you can use Robot Control Language with Savvy, an operating system/database manager from Excalibur Technologies. This combination is about as close to English as you can get. Essentially, RCL with Savvy allows you to teach your robot your language.

Run or write your programs on the computer, and download them directly into the robot's own internal memory. The standard RB5X has 8K; an additional 16K is optional. Sharon Smith, public-relations coordinator for RB Robot, says, "Super Serial and the California Systems 7710 are two telecommunications packages we have run successfully with RB5X, but any one that fits your computer will work just fine." Plug your

RS-232 cable into the serial port on your Apple and the end with the 25-pin D female connector with male pins into the RB5X. Download your programs and then unplug the cable, and your robot will move independently.

### What's Available Now

Voice and sound synthesis is now an available option. The sound generator and the voice chip are on the same card. On-board voice recognition is currently in the development stage, but you can talk to your robot through your Apple already. Any off-the-shelf voice-recognition board that plugs into your Apple can enable you to start chatting with your electronic companion. The folks at RB Robot recommend the voice-recognition assembly made by Scott Instruments, of Denton, Texas. Whichever model you choose, just plug the voice-recognition board into your Apple, and the Apple

into the robot with the RS-232 connector. You have now established direct voice communications with your robot.

When using voice commands, you are limited by the length of your cable—the RB5X must remain connected to the Apple in order to hear you.

What else can your RB5X do? You can turn RB5X into a butler for your next party. When the doorbell rings, RB5X responds by saying, "Come on in, the door's unlocked." When the door is closed, RB5X says, "I'm so glad you could make it. The coatrack is down the hall." You can write another subprogram to make RB5X shake hands with all the guests. "RB5X uses either a patterned program or self-teaching software that enables the robot to learn its environment after being turned loose."

RB5X can navigate through mazes and obstacle courses. Perhaps you could

### ▶ JUST WHAT IS A ROBOT?

Although there are a lot of complicated definitions around, one useful way to think of a robot is in terms of how it functions in comparison with a human equivalent. The brain of a robot is a microprocessor. A mechanical arm can perform in ways similar to a human arm. Legs are replaced with wheels and run by a motor. The various senses are mimicked by various other devices. Photoelectric cells and sonar replace touch, a voice synthesizer replaces speech, optical-recognition systems replace the sense of sight. Even the sense of taste can be paralleled, in an approximate way, with complex chemical systems.

Approaching these human equivalents is complicated. Joe Bosworth, the president of RB Robot says, "None of the elements that make up the robot are unique. Robotics is not a discipline in its own right but a package assembled from available technologies." As we reach the solution to each particular element and refine the subsystem, the entire robot becomes more capable. For instance, refinements in the bumper switches and sonar devices for the RB5X constitute a major step in the robot's ability to "sense" its location in relation to objects such as tables and chairs.

Several companies have introduced, or are close to introducing, personal home robots. Once you purchase the basic robotic body, you have the option of buying additional peripherals: arms, motors, more memory, and more software programs. All the companies tell us that the current robot is just a first step,

that they will be supporting their product with a lot more add-ons.

Ron Seman is a man in his twenties who has formed a company called Personal Touch. He describes it as an association of about 100 people—scientists, technicians, engineers, computer specialists, and marketing people—all dedicated to making a great breakthrough in personal home robots. Seman will talk robotics to you 24 hours a day. We asked him to elaborate on the field and its future.

Robotics is still in a primitive stage today according to Seman. He says that many elements of the necessary technology are around, but no one has yet put the pieces together. "There are companies making headway in robotic vision systems, dedicated arms are getting better, we're seeing superior software and faster processors coming out . . . but all the pieces just haven't fallen into place because nobody has created a demand, a market for home robots."

Steve Truman, an engineer and ambassador-at-large for R.B. Robot, thinks his company has produced a home robot that could create a home market, one that could spark excitement. "RB5X can potentially be programmed to do many, many exciting things. He's built in such a way that his basic capabilities for processing information, for carrying on various types of actions, for performing humanlike sensory activities are there. I'm excited that RB5X has this enormous base of possibilities. It allows a user to get very creative."

# ASCII EXPRESS

Like a little bit of paradise.

## No other telecommunications software offers you so much flexibility, speed or ease of use.

Whether you're a business professional dialing up far and distant places or an at home user talking on the local bulletin board, you'll love the variety of features only ASCII Express gives you.

Only with ASCII Express are features such as the most extensive macro library for unattended call-up and receiving of information, a text editor for composing messages without a word processor, and it handles data transfer at speeds up to 9600 baud.

The ASCII Express supports a full range of 80-column boards and printer interfaces. It allows the sending of electronic mail—and it has the ability to emulate over a dozen different terminals.

There's an easy to understand manual and throughout the program you'll find help menus that make using the ASCII Express an absolute dream.

To learn how the ASCII Express can take you to paradise, see your local dealer, or call UNITED SOFTWARE INDUSTRIES at 213-556-2211.

CIRCLE 295 ON READER SERVICE CARD

stage a robotic steeplechase, spin the robot, or musical chairs. If you really get going, you can program RB5X to play a sort of football, with offensive and defensive plays all worked out in advance. (This last scenario works best if yours is not the only robot on your block.)

Getting back to that party, RB5X is a gifted story- or joke-teller, given a good

voice-synthesis program and some programming on your Apple. If you're clever enough, you can get it to do imitations of famous movie stars. You can program RB5X to dance, to conduct with a baton in hand, to lead a group in singing "Happy Birthday," or to remind your departing guests to reciprocate: "When are you going to have a party?"

On a more serious note, you can pro-

gram RB5X to function as a mobile home-security system. The company also promises an attachment that serves as a fire extinguisher if RB5X senses a sudden rise in temperature in your house.

Another future development is an intruder-alert siren. It won't yet clear the table and wash the dishes, but with the arm and vacuum options now available it

## ► MOVE OVER, PICASSO

The City of New York has hired a robot to paint sanitation trucks side-by-side with human workers. While the futurists debate the long-range effects of robots on the economy, speculate about just when they're going to arrive, decide how many workers will be displaced, and contemplate other issues of grave importance, New York City has taken the plunge.

Without too much fuss or bother, the bureaucrats have gone ahead and added a robot to the ranks charged with beautifying the city's supposedly white sanitation trucks. With a speed previously unknown in any municipality, all the technicalities and paperwork have been completed. The \$375,000 robot, made

by the DeVilbiss/Trallfa Corporation, is on its way.

The robot's programming will enable it to imitate human motions in spray painting, and the robot will labor right next to the flesh-and-blood sanitation workers to repaint more than 600 of the city's garbage trucks per year. About ten workers, none of whom seem saddened by the robot's arrival, are involved in the painting.

Both managers and workers approved the decision to bring in the robot. All concerned agreed that painting the trucks was fummy, hazardous, and boring, a job that they would just as soon leave to an android. The long-term effects of spray-painting on people are unknown, but

many believe spray-painting to be hazardous to general health and a possible cause of lung cancer.

The Sanitation Commissioner, Norman Steisel, referring to the French Impressionist painter, dubbed the robot, a "mechanical Manet." Steisel further described the robot as being a flexible, dedicated arm that could be programmed to simulate human painting motions.

The process of teaching the robot to move its arms in the appropriate patterns involves physically leading the arm through each detail of the range of motion. The robot stores the memory of these physical motions on a disk. Its coworkers run the disk to put the robot through its painting paces.

And now for  
Apple ///

## YOUR KEY TO PROFESSIONAL WORD PROCESSING

**Powerful:** All the standard goodies: find, replace, move, save/insert sections. Glossary function for quick entry of commonly used phrases. Form letter (mail merge) built in. File chaining for long documents. Standard text files link to spelling checkers and databases. Printer spooling -- print one chapter while you type the next -- using RAM card or //e Auxiliary Memory.

**Reliable:** Three years of sales and user support. No surprises. No "death in the night."

**Options:** ZIP-COMM communications package fits inside Zardax to send or receive text easily. \$80.

**Versatile:** Over 40 printers and many interface cards supported. You can create or modify printer files if needed. Twelve ][+ 80 column cards, plus //e text and Auxiliary Memory cards. Also works in 40 columns. Free and copyable Utilities disk available from dealers adds new devices and features as they become available.

**Easy:** Editing commands are easy to remember and teach. Two menus for disk operations and printing. Built-in print formatting commands so you don't have to mess with escape or control codes.

**New for the Apple ///:** More power and features at the same price -- \$210. Text files up to 197K load from ProFile in under 11 seconds. Commands compatible with ][+ and //e versions.

Just push our button - -

Dealer inquiries invited.

will vacuum your major traffic areas while you're at work. And according to RB Robot's Smith, "You have to remember that RB5X technology is only a year old, so in spite of our high expectations it is only in its infancy."

### Shaping the Market

Nolan Bushnell, founder of Atari, Inc., in Sunnyvale, California, started Androbot, a company you're going to be hearing more about. Androbot is well-financed, and no one believes Bushnell has lost any marketing savvy in the process of moving from Atari to Androbot. Rick Gibson, the product manager, told us, "The home-robotics market is in its infancy now. We think Androbot is going to have a major hand in shaping that market by having products at different price and performance levels for the home and the education market. We've got exciting robots, but we don't want to promise more than we can deliver. We'd rather surprise and delight people than dash expectations."

The Androbot family consist of Fred, Topo, and B.O.B, the most advanced of the lot. Those initials stand for "brains on board" and refer to the central-processing unit contained among the robot's metallic innards.

Fred, the youngest member of the

family, stands 12 inches high and sells for \$400. Gibson says, "Fred is a friendly, robotic educational device that's designed to help make learning fun and pleasant. Fred has many humanlike characteristics. He can move, he can talk. We expect to sell hundreds of thousands to homes and schools." You con-

**▶ Topo is larger, contains more memory, and has a greater capacity for upgrading.**

trol Fred with an infrared mechanism that allows you to steer him, in much the way you would a remote-control car or plane. When you connect Fred to an Apple, you can make more complicated demands on him. You can have him draw various shapes and patterns when he's connected to the Fred Pen and Pad. He can be used to teach programming, acting as a three-dimensional lesson in geometry, much the way the Logo turtle operates. If you equip Fred with a voice synthesizer, you can program him to run kids through their lessons.

Androbot expects to develop many educational and entertainment programs for Fred as the robotic device starts to sell. Programs can be developed on the Apple to enlarge Fred's range of possibilities.

Topo is larger, contains more memory, and has a greater capacity for upgrading and expandability than does Fred. He costs \$1595. You can hook Topo to an Apple interface and program him in robotic language. You can program him to walk, to move his universal arm in various ways, to pull his Androwagon. Gibson says, "Topo will be able to do all kinds of fun things. He can be programmed to serve drinks that are placed in his wagon. He will ask your guests, 'Would you like a drink?' Topo can pause for 30 seconds, give them a chance to pick up a drink, and go on. Toward the end of the evening, Topo can come in and say, 'Put your empty glass in my wagon, please.'" Also on the horizon are voice modules that allow Topo to speak in different languages, such as French or Japanese, or in regional accents. He could drawl like a Texas sheriff or be a one-man barbershop quartet.

For the more serious experimenter, B.O.B features a memory chip with

# THE PRIME PLOTTER™

The Graphics/Statistics Package FOR THE APPLE II+ / IIe

## Praise Our Own Product? The Reviewers Have Done It For Us!\*

"The Prime Plotter is the kind of graphics package you'd expect to find on a mainframe computer." "Once mastered, there is no plotting package that is quite this versatile and powerful."

**Gregory MacNicol**  
InfoWorld September 5, 1983

"The Prime Plotter contains more power than any graphing package I have used." "It can do many things not found in other packages; I know of no competing program which can do as much!"

**David Morganstein**  
Washington Apple Pi May 1983

"The Prime Plotter is a surprisingly complete plotting package designed for a variety of applications. Routines to create X-Y plots, 3-D charts, bar graphs, and figure charts make the product the most powerful plotting package the reviewer has seen." "The product is superb for creating 'slide-show' presentations of generic data."

**Chris Williams**  
MICRO August 1983

"Prime Plotter is a carefully conceived, well-executed package for business or scientific applications that can benefit from its great power." "Flexibility is the hallmark of this package."

**AEDC**  
SOFTALK September 1983

"At first glance, it's almost overwhelming." "While simplicity is a key, the myriad of possibilities featured can test the ingenuity of even the most knowledgeable user."

**Business Software**  
Vol. 1, No. 5, Sept./Oct. 1983

bored on an assembly line. They don't ask for raises or organize strike committees when their work demands aren't met. They don't need vacations or coffee breaks.

Many people who work in routine or hazardous areas would be glad to hand their jobs over to a willing robot if they got retraining for jobs in which judgment, flexibility, and managerial skills play a major role. The June 1982 issue of *Inc.* detailed the story of shipyard welder who continually was burned, poisoned, and nearly blinded by years of welding ships and submarines. The job required him to work in airtight compartments, even hanging by his feet to reach certain difficult areas, with the hot flame of iron inches from his face. This man was glad to hand his job over to a robot.

The encroachment of robots on humans' employment turf worries many people, though. One congressional study estimates that robots may cut humans out of 1 to 3 million jobs in the near future and 7 million by the year 2000. Another study shows that if robot costs drop to \$30,000 (very likely, as volume production of robots gains in efficiency), 5% of the 80 million blue-collar workers in the United States and Europe may be getting their pink slips. The job categories most vulnerable include welding, production, painting, wrapping, and packing.

When are we going to see mature robots like Humphrey, our friend from 2081?

Says Seman, "I anticipate major jumps in computing power within the next five years. A lot of personal computers have 16-bit memories as their basic information chunk now. That will soon jump to 32 bits, and then 256 bits. Set up several of these coprocessors working in parallel, and you get a lot more computing power. Speech synthesizers, for instance, can now recognize 2000 words in a sophisticated system." According to many observers, we'll soon see a great leap in the ability of robots to recognize and speak; systems of 10,000 and 20,000 words will become commonplace.

So, we have general agreement that robots will be able to walk better, to coordinate their arms better, to communicate better. They will soon taste food for seasoning, mind the kids, wash your car. The possibilities are limitless, but we await a catalyst. That catalyst will be the interest of the home experimenter. Hobbyists and enthusiasts will make the market.

The technology awaits. Introduce your Apple to a robot today. **+**

## COMMUNICATION PROBLEMS?

### PERSON-TO-PERSON™ PROVIDES THE INTEGRATED SOLUTION

Data, voice and mail, RTP 1.1 handles them all.

PTP keeps a single comprehensive phone, address and memo database. With this file, it prints, dials and runs computer communications. Perfect for the home. A productivity tool for business.

- Dials voice calls, can use non-Bell long-distance, send tone-dialed data
- Displays any address in 2 seconds, revise memos during calls
- Print an envelope, filing card, mailing list or merge-print form letters
- Up or download data files or electronic mail
- Auto log-on or prompted auto answering with auto up or downloading
- Alternate voice and data

PTP has interactive prompting and is totally menu-driven. It's convenient, versatile, fast and friendly.

**Person-to-Person. The integrated communications database for the Apple II and //e from Trutec Software.™ Only \$69.95.**

Ask your dealer for a demo. Or order direct by phone or mail. Credit card orders accepted by phone. By mail send check or money order. Add \$3.00/shipping. California residents add 6% sales tax. Dealer inquiry invited.

Minimal system: 48K, 1 disk drive. Optional: modem,\* printer, 16K card, 2nd disk drive, 80 column card, //e features. Capacity (64K) about 1400 listings per file. Also suitable for general filing.

\*Modems supported: Hayes Micromodem II or //e, Smartmodem 300 or 1200 (with Apple Super Serial Interface), Novation Apple-Cat II and compatibles of these.

Apple is a registered trademark of Apple Computer. Micromodem II and Smartmodem are registered trademarks of Hayes Microcomputer Products. Apple-Cat II is a trademark of Novation.

## THE BEST WORD PROCESSOR IN THE WORLD! Well... Maybe...

For The Apple II, II+, And IIe,  
Softinson Data Corporation Presents:

### THE SOFTGLOW WORD PROCESSING SYSTEM

There are many word processors available for the Apple Computer, each having different features and functions, and each claiming, in some way, superiority to the others. Trying to pick "the best one" to meet your requirements can seem like an impossible task. Softglow, from Softinson Data Corporation, may be the answer. Its features are listed below in some detail, and its price is inexpensive enough to justify its purchase even if you already own a word processor.

#### Some Facts—Softglow:

- is a true full screen editor for the Apple II, Apple II+, and Apple IIe—at all times, "what you see is what you get."
- is written completely in assembler language—system response time is very fast—screen update is instantaneous.
- uses standard DOS text files—so it's compatible with many other word processors.
- has fast loading of text files—up to 5 times normal speed.
- has standard word processing features—such as word wrap around, alpha lock, tab, and global search and replace; and some nonstandard ones such as soft hyphens and non-break spaces.
- supports lower case, the shift-key modification, and enhancer (under the keyboard) boards.
- utilizes the full capabilities of the Apple IIe.
- has fully buffered input—characters cannot be lost no matter how fast they are entered.
- software is unprotected—so making backup copies is no problem.

#### And Some Figures—Softglow Has:

- 12 Cursor Control Commands—including move cursor by word, page, and paragraph.
- 5 Modes of Updating Text—insert, delete left, delete right, replace, and case change.
- 9 DOS File Commands—uses standard DOS file-commands are: load, save, delete, catalog, lock, unlock, rename, verify, and initialize.
- 9 Block Commands—including delete, move, and copy a marked block; save and append a mark block to a file; and load a file of the current cursor position.
- 11 Find and Replace Options—including forward and backward search, wild card, whole word search, ignore upper and lower case, and replace all.
- 16K RAM Card—used, if available, for added text space.
- 25 Printer Format Commands—including left, full, center, and right justify; multiple headers and footers; draft copy; file insert and file chaining; the printing of text to any slot, or to a file for later printing or sending; and hyphen help.
- 20 Configuration Parameters—so the system can be customized to individual applications.
- 2K Macro Area—any characters typed at the keyboard can be entered as a macro, to be invoked by a one or two character sequence. Form letters are easily produced using this feature.
- 3 User Defined Files—configuration parameters, macro definitions, and tab stop positions can be loaded automatically at power-up, or loaded anytime while running the editor.
- 32 User Defined Tab Positions.

#### And The Best Figure Of All:

- \$49.95—check or money order.

Sound complicated? It really isn't. Softglow is extremely easy to learn, and yet, unlike so many others, advanced enough to meet your future word processing needs. It's just possible that, for you, Softglow is the BEST WORD PROCESSOR IN THE WORLD!

To use the Softglow Word Processing System, you will need:

- An Apple II, Apple II+, or Apple IIe, with a minimum of 48K of memory.
- One or more 16-sector disk drives (DOS 3.3).
- A TV set or video monitor.
- A printer with interface card to print out documents.

Apple is a registered trademark of Apple Computer, Inc.

Send \$49.95, plus \$2.00 shipping and handling, to:

## ► GRAPHICS/BY FREFF

For decades, artists in science-fiction stories—artists either centuries in the future or galaxies away—have painted not with brush and canvas but with the raw stuff of light itself.

Such creative endeavor is no longer merely the stuff of science fiction. The real world has caught up with this particular part of the fantastic. Nowadays, painting with light is something that everyone can enjoy—without having to go to Andromeda to do it. All you need are the right tools:

The first tool is a computer with a col-

or monitor. An Apple II Plus or IIe fills the bill here just fine, and many inexpensive but good color monitors, such as the Sakata, Commodore, and Amdek models, are available.

The second tool is some kind of input device or devices. Which one you should choose depends on how much money you want to spend and what painting software you select. You can choose from graphics tablets such as the Apple Graphics Tablet, the KoalaPad, and the Powerpad; light pens such as the Gibson; and any number of different brands of

joysticks and game paddles.

The third tool is the paint program itself. Here again you have a wide range of choices, because more than ten packages are available. The Apple was the first computer in the general marketplace to offer high-resolution color graphics, and competing software writers have wasted no time in doing great things with its abilities.

That's all you'll need. Figure out what you want to do, from doodling to architectural rendering to electronic fine art; select the right set of tools; set them

up; and soon—like others in the rapidly growing legion of creative people using computers—you could be painting with light, too.

### Rules of the Ground

In art, the *ground* is the surface onto which you actually lay paint. It's very important, because its texture, flexibility, durability, and relative slickness are what set the limits on what you can achieve with your paint.

Your Apple has a ground, too; it's based on the resolution and color-mapping limitations of its hi-res screen.

Although you don't have to understand it to make pictures (any more than it's essential for a Sunday painter to know how to grind his own oil colors), you'll be happier if you do. Like many other things in the world of computers, the system is a compromise; and until you know *what* was compromised and *why*, the results you'll get won't necessarily make a lot of sense to you.

Measured in the individual dots of light, called pixels, that make it up, the Apple screen is 192 pixels high by 280 pixels wide, for a grand total of 53,760

available pixels. That number probably sounds like a lot to you, but in terms of visual precision, it isn't. The screen just doesn't have enough available pixels to draw angles and curves accurately—in fact, it would take at least four times that many pixels to really do the job well. Here's the first rule of the ground: Unless you're dealing strictly in straight vertical and horizontal lines, your drawing will have a slightly rough texture that computer artists call "the jaggies."

The other ground rules come from computer memory—or, rather, from the

TOP: A QUICK SKETCH DEMONSTRATING COLOR-ANOMALY EFFECTS AND THE DISK-DRAWING FEATURE OF MICRO-ILLUSTRATOR

BOTTOM: SAME SKETCH, MIRRORED TOP-TO-BOTTOM AND LEFT-TO-RIGHT WITH "TRICKS" MODULE OF SPECIAL EFFECTS

TOP AND BOTTOM: SAME SKETCH RUN THROUGH OTHER MIRROR AND COLOR-CHANGE TRICKS FROM SPECIAL EFFECTS

lack thereof.

Even though 53,760 pixels are too few for real precision, they're far too many for the Apple's memory. If the color and location of each pixel were stored as a byte of information, which would be the ideal case, then drawing a single picture would take up 54K of precious memory space. Clearly, this wouldn't work. If you needed 54K for the picture and 8K for the Apple's operating system, you'd have only 2K left for the entire painting program (assuming you had a 64K machine in the first place)!

To get around this problem, the Apple's designers compromised. They decided to divide the screen into horizontal lines and let the pixels be stored as horizontal groups of eight, corresponding to the eight bits in one byte of memory. In this scheme of things, a screen is really 40 bytes wide by 192 high and requires just under 8K of memory to control.

That's an elegant solution in terms of practical use of memory, but, like other compromises, it introduces a new set of problems. With this arrangement, only

eight pure colors are possible: green, blue, violet, orange, two different blacks, and two different whites. (The two whites and two blacks are identical in appearance on the screen, but their pixel constructions are slightly different. White1 and white2, for example, react differently with other colors). This method of storing pixels also cuts the screen resolution of the four true colors in half, down to 140 by 192. In addition, it creates a whole nest of "color anomaly" problems, difficulties that have acquired names such as "ghosts," "ze-

A CLOSE-UP EDITING VIEW OF SAME SKETCH, MAGNIFIED SEVEN TIMES, SUPPLIED BY MICRO-ILLUSTRATOR'S MAGNIFY COMMAND

bra stripes," and "flips."

These color quirks are actually both bad *and* good. Unplanned, they can frustrate you mightily and destroy an otherwise good drawing, but thought out and controlled, they can be powerful creative tools. Sometimes, to make a great picture, an artist has to go a little wild, and color anomalies can come in handy.

#### Painting by Program

Each of the available painting programs has had to tackle these problems and reach some kind of negotiated peace with them. As a result of the need for

compromise, many of the programs bear only a surface similarity to one another—and none is absolutely ideal.

What follows is only an overview. Even the simplest program here is too complex to discuss fully in a single article. After the program descriptions, I'll offer a few tips on how to get more out of these packages and give you a hint of new delights to come.

In the meantime, let this information edify you, even guide you, but not *lead* you. Find a store or a friend who has one or more of these packages, and try them

out. Contact the companies. Join a users' group. Read books and manuals. Above all, *ask questions*—no question is too dumb when you're an Apple hi-res beginner. Believe me, everybody was there once.

Most important, be ye a seasoned pro or a Sunday dabbler, have fun!

The painting programs we'll be taking a quick look at are

- The Apple Graphics Tablet Software, from Apple Computer
- Designer's Toolkit, from Eclectic Electric and Apple Computer

- Micro-Illustrator and The Illustrator, from Island Graphics
- The Complete Graphics System II, Special Effects, and The Graphics Magician, all from Penguin Software
- The Utopia Graphics Tablet System, from Todd Rundgren
- Painter Power, from Micro-Lab

### The Apple Graphics Tablet Software

The Apple Graphics Tablet was the first true art tool anyone manufactured for a home computer, and thus the software that came with it originated many

of the functions that now serve as standards: things like being able to choose *what* to draw with—lines, dots, frames, or filled boxes of different sizes—and designate “windows” to protect portions of a picture from accidental change. The software is primitive—there’s no denying it. Its principal advantages today are that (a) it comes with the tablet automatically when you buy it; (b) it has a wonderful, largely blank overlay screen with a grid and many empty control boxes, which you can use to control your own programs;

and (c) the manual that comes with it is one of the best ones Apple has ever produced: concise, clear, and abundantly full of alternative programs and the tablet code you’ll need to learn how to program the tablet.

If you do buy an Apple Graphics Tablet—which you should if you plan to do any serious study of Apple graphics—do yourself a favor and start out with this software. As it stands, thanks to its extensive tablet-reformatting commands (which allow you to do things like fill the entire hi-res screen with work that fits on only a few square inches of the tablet), it is one of the best *sketching* programs around. Although you will quickly outgrow its other features, what you learn from it will make it easier to understand the ways other systems work—something a few of their manuals will definitely not.

### Designer’s Toolkit

The other program Apple markets for the Graphics Tablet is Designer’s Toolkit, which was created by the husband-and-wife team of Lucia Grossberger and

Because our new Micro Cookbook makes it easier than ever for you to bake, broil, roast and fry ‘em.

Not only by giving you more than 150 recipes—which it does. But by simplifying the whole art of cooking.

You see, Micro Cookbook eliminates messy, confusing recipe files. Instead you simply insert our program into your computer and select any recipe your heart, or stomach, desires.

The recipe you select can be one of the mouth-watering dishes we include—or you can create a diskette of your own favorites. And you can constantly modify your selections, adding new triumphs and removing recipes that, ah, bomb.

These, and Micro Cookbook’s other features will make your life in the kitchen a breeze.

With that in mind, is it any wonder Micro Cookbook makes this guy so nervous?

Versions available for Apple II+, Apple IIe (80 col), IBM PC/PC XT/PCjr (128K, 80 col) and Commodore 64 (disk). Soups & Salads, Appetizers and Desserts optional recipe diskettes available and more are coming.

**Micro Cookbook** at dealers everywhere.

Apple & IBM are registered trademarks of Apple Computer Inc., and IBM Corp. respectively.

## VIRTUAL COMBINATICS

P.O. Box 755, Rockport, MA 01966  
(617) 546-6553.

# Why pigs are terrified of our software.

▶ **A brush is really a shape table that the computer displays on the screen.**

Harry Vertelny and programmed by David Rifkind. Grossberger is an artist and Vertelny an architect; one look at the tablet-overlay sheet that comes with their program is enough to show that they mean business.

Around the tablet’s drawing area are six horizontal rows of color-coded boxes, one above and five below. These 120 boxes represent different functions of the program, all of which you can call up with a press of the tablet’s stylus. Thirty colors are available: the original Apple eight, plus combinations of them that create the effective illusion of other tints, shades, colors, and textures. Fourteen of the colors are user-programmable.

The program also offers 20 different “brushes” to draw with, 10 of which you can design for yourself. A brush is really a shape table that the computer displays on the screen when you give it the right command, and that shape table can represent any figures. The 20 that come with Designer’s Toolkit, for example, include everything from simple dots and lines to electronic-circuit symbols

# Turbo Charge Your Apple® With Buffering!

**If you use a printer now...**

## **Bufferboard™**

**For Apples and Printers**

The Bufferboard is the original add-on buffer upgrade for existing interfaces. Easily installed, its memory power can store up to 20 pages of your Apple text data at a time. The Bufferboard accepts print data as fast as your Apple can send it. Then the Bufferboard transmits to your printer, while your computer races on to its next task.

The Bufferboard uses an available Apple slot and "Docks" onto most popular interfaces, including Epson, Apple and Orange Micro Grappler configurations. No external power supplies, no clumsy boxes and cables. It's the easiest and most economical way to add buffering.

1400 N. LAKEVIEW AVE., ANAHEIM, CA 92807 U.S.A.  
(714) 779-2772 TELEX: 183511CSMA

© Orange Micro, Inc., 1983

**If you're just adding a printer...**

## **BUFFERED™ Grappler +**

The Buffered Grappler + is the most powerful Apple printer interface you can buy. All the memory features of the Bufferboard have been merged with the smartest interface available... the Grappler +. The Buffered Grappler + now gives you over 27 different built-in features. Buffer expansion capability allows up to 20 full pages of text memory. Exclusive new features give you special support of Ile 80 column text, screen dumps for Epson graphic aspect ratios, and support of the new Ile Double Hi Resolution Graphics. Other features you'll be using in no time include Dual HiRes Graphics, Mixed Mode Screen Dumps, Enhanced Graphics, text formatting and much, much more. The New Buffered Grappler +. So much interface power you'll never need anything else.

and little drawings of cartoon men and women. As you can see, a brush can be anything you want it to be—a star, your signature, a drawing of your cat—as long as it doesn't exceed a certain size limit imposed by the way the program uses memory.

This software also introduced some features that have become "standards," such as being able to work on two pictures at once (with the Apple's two separate hi-res-graphics pages) and merge them in interesting ways; do various types of color inversions, separations, and image mirrorings; draw in filled and unfilled circles; and add text to an image. In fact, on the latter score, Designer's Toolkit is well ahead of other packages that require separate software for extra typefaces. Fifteen different typefaces, from Broadway to Greek to Shadow to ASCII, come with it.

You may consider one of this program's strengths a weakness, depending on your point of view. It does not offer a way to preview any of the user-programmed colors or brushes, so unless you write them down in the boxes on the mylar overlay, it's easy to lose track of what is available to you. Furthermore, when you paint with a user-programmed brush, the cursor you see on the screen

has nothing to do with the shape of the brush you are using, so you might have trouble being precise.

These complaints are minor, however. Designer's Toolkit is a powerful program that would serve well as the center-

▶ **Designer's Toolkit is a powerful program that would serve well as the centerpiece of a system.**

piece of a system.

#### Micro-Illustrator and the Illustrator

These programs are both creations of Steve Dompier, a Californian whose history in the computer field goes all the way back to the Homebrew Computer Club, which inspired Steve Wozniak to come up with the Apple in the first place. Dompier has always been interested in making graphics tools more easily available, and his two programs represent, in some ways, both the top and bottom of the Apple graphics world.

Micro-Illustrator is everywhere. It comes bundled with Powerpads and

KoalaPads as standard software. Recently, the back of a cereal box even offered it for sale as a promotional tie-in for a major computer manufacturer. There is no better beginner's package in terms of price and performance, which makes it ideal for kids, students, or anyone interested in computer graphics but hesitant to dive into the deep end of the pool.

Micro-Illustrator is simple to operate with the KoalaPad, the Powerpad, a joystick, or game paddles (the two pads will enable you to draw in a more natural fashion). Everything you will need is on one menu; it contains eight possible brushes; 18 basic colors, tints, and shades; and your choice of drawing modes from freehand to points, lines, connected lines, rays, frames, boxes, circles, or discs. An efficient "fill" program lets you place your choice of color within any enclosed area on the screen.

How well and fast a fill program operates is one way to tell how good a program is. Another way is to see if the software makes any provision for *stopping* it once it has begun. Micro-Illustrator does, which is good, because fills can often leak through gaps in lines that were too small for you to notice, changing the color in areas of your drawing that you

**PROTECTED SOFTWARE**

Introducing

# COPY MASTER II

a disk copy system for the Apple II, Apple II+ & Apple IIe  
that makes a back-up copy with the push of a button.

**SO WHY PAY MORE?**

**TAKE ADVANTAGE OF OUR LOW INTRODUCTORY PRICE AND ORDER NOW:**  
Send check or money order for \$99.95 plus \$5 shipping and handling (Calif. residents please add 6% (L.A. County 6½%) Calif. Sales Tax) to:

APPLIED TECHNOLOGY LABORATORIES  
11926 Santa Monica Boulevard, Dept. N  
Los Angeles, California 90025  
(213) 477-6815

(Please specify computer type when ordering)

- ★ **COPY MASTER II** makes back-up copies of all memory resident software, at the press of a button. (64k copy requires a language card or a IIe).
  - ★ Bit copiers and nibble copiers, such as Locksmith, Nibbles Away and others, are hard to use because a different set of complex parameters must be discovered for each program that the user wants to back-up. **COPY MASTER II** requires just the press of a button to copy all of memory onto a standard DOS 3.3 initialized disk. The copy produced is unprotected and can be loaded back into memory with standard DOS commands.
  - ★ Previously hidden code becomes accessible and subject to change or study.
  - ★ Freeze games and then restart them days later. Or save the winning display on disk.
  - ★ Single-step and trace through any program.
  - ★ The **COPY MASTER II** set comes complete with plug-in, slot-independent board, operating software on disk and an instruction manual. Since **COPY MASTER II** has on-board RAM rather than unchangeable ROM it supports both the COPY as well as the STEP and TRACE programs. **Unlike some copy boards, there is no extra utility software or expensive EPROM to buy.** There are no chips to pull.
  - ★ All hardware is made with the finest components. There are no shortcuts taken: 18 chip board.
  - ★ System Requirements: an Apple II, Apple II Plus, or an Apple IIe, 1 disk drive and DOS 3.3.
  - ★ 48k copy made in less than 15 seconds, 64k in less than 20 seconds.
  - ★ Special utility program allows the copies to run without a copy board.
- TRADEMARKS:** Apple II, Apple II Plus and Apple IIe are trademarks of Apple Computer, Inc.  
Locksmith and Nibbles Away are trademarks of Omega Micro-ware, Inc. and Computer applications respectively.
- Important Notice:** **COPY MASTER II** has many uses. However, **THE COPYING ABILITIES OF COPY MASTER II SHOULD BE USED SOLELY FOR ARCHIVAL PURPOSES.** Any other copying use may be illegal.

didn't want changed.

Another nice feature of this program is its Magnify command, which automatically enlarges the drawing you are working on by a factor of 7, making it easy to move around and edit on a pixel-by-pixel basis (so you can prevent problems like the one mentioned just above). In addition, the program has a Help page, about the only one of its kind to be found in Apple Graphics packages.

Going from Micro-Illustrator, good though it is, to Dompier's The Illustrator is like jumping from a moving bicycle onto a moving jet. The version of The Illustrator that I received for review was in beta-test form, so there may be changes before it is fully marketed. But even with that caveat, I feel safe in saying that this is one of the best—if not the single best—system currently available to the Apple artist.

The best illustration of its flexibility is to describe how its color palette works. Other systems allow you to design your own "colors" (pixel-by-pixel combinations of the basic eight), certainly, but they are slow and cumbersome. In The Illustrator, when you call up the color menu, you get a list of different sections that work together to make color creation easy. The top section is a close-up,

enlarged view of two bytes of color memory—16 different boxes in 4 horizontal rows of 4 boxes each. Whatever controlling device you use (a joystick or game paddles are acceptable, but a Graphics Tablet is better) can place the color of your choice in the box of your

**▶ In The Illustrator, you can choose functions anytime from either the tablet or the computer keyboard.**

choice. The large empty box beneath the pixel display changes instantly to show you exactly what that section of pixels will look like if you use it as a color on the screen. Experiment until you find one you like and then store it among the 90 spaces available on the page for pattern display. (According to the numbers, by the way, this system makes over 17 billion "colors" possible. Whew!)

The Illustrator has many other good points, but there's one respect in which it truly shines: In most systems that use the Graphics Tablet, the designers have

opted for placing all controls on the tablet itself, reserving the computer keyboard for typing titles and changing numerical settings for different functions. This approach is good, in that it allows you to concentrate on the tablet and the screen. It can also be slow, though, as you hop back and forth from one menu to the other to issue repetitive commands.

In The Illustrator, you can choose functions anytime from either the tablet (by placing the cursor over the appropriate command and pressing down) or the computer keyboard (by pressing the letter associated with a function). This situation is really the best of both worlds, because as you learn the letters that correspond to different functions, you can press them with one hand while drawing with the other and never have to leave the drawing you are working on.

**Three from Penguin Software—The Complete Graphics System II, Special Effects, and The Graphics Magician**

God bless Penguin Software—really—because this group of programs, taken together, is the most comprehensive set of electronic paint programs, encompassing even three-dimensional-shape construction and screen-animation

## THERE'S ONE HYPOTHESIS THAT DOESN'T NEED TESTING... DAISY PROFESSIONAL MEETS YOUR DATA ANALYSIS NEEDS!

Data Analysis Interactive SYstem brings powerful analytical capabilities to your personal computer. Daisy Professional is ready and willing to work on the data analysis problems of researchers, educators, business planners, scientists, marketers, government analysts, and students.

Requires: Apple\* II Plus or Apple IIe.

Price: \$199.95

A separate utility is available for \$99.95 to interface with Multiplan™ and General Manager, and to download from mainframes.

techniques. Even better, they comprise individual modules that you can use to enhance the graphics in your own programs, and the manuals that come with the software are full of useful hints and programming tips.

Not that you have to be a programmer to use them—but if you are or think you might ever lean in that direction, these packages are definitely right for you.

They are also the best programs on the market for making your images move. In fact, animation sometimes seems to creep into them by accident. Take, for example, one of the most useful Penguin modules, the one that "packs" pictures, condensing them so that they take up less space when you store them on a disk. Storage of the normal hi-res page requires 34 sectors of disk space. A "packed" picture takes many fewer sectors, requiring only 7 to 25 sectors, depending on how complex it is. You can "string" several packed pictures together, so that you can reload them into the computer's RAM at the same time. When you call these pictures back onto the screen, the program "unpacks" them—that is, it redraws them—and the result is a kind of animation. A careful artist can actually use this process to create lively, changing story-

boards. It's no wonder that this software has become a favorite among those who do business presentations and computer "slide shows."

In executing more standard Apple graphics techniques, these packages compete well with the other available

**You can 'string' several packed pictures together, so that you can reload them into the computer's RAM at the same time.**

programs, offering a palette of 107 colors and many interesting color-inversion and mirroring functions. If the system has any limitation, it is that it's designed to work with game paddles or joysticks and must be altered to function with a tablet.

#### The Utopia Graphics Tablet System

The Utopia System was designed by

computer/video artist and rock star Todd Rundgren, and for a while Apple's Special Delivery Software line marketed it. The official word from Rundgren's management is that the system is under revision and will be released again at some future date, from some unknown software vendor. In the meantime, Apple has a few copies left—I was able to get one for this article—and certain stores around the country have a few more.

This program certainly isn't for everyone, but it does have some functions that no other system has, and that makes it worth having if you're truly hooked on Apple graphics.

It's like a psychedelic offspring of the original Graphics Tablet program. All of its functions are there, and it also has image-altering options such as "dither," "reticulate," and "kaleidoscope" and commands to make your brush shapes automatically rotate or change color as you draw with them. (Dither lets you deliberately unfocus a picture slightly—"fuzzing it up," as the program's manual puts it. Reticulate creates an automatic quilt of vertical lines across the pages, all of different colors and widths, letting you pick whatever one you want on which to start building your own mad patchwork. Kaleidoscope takes anything

Now you can monitor and control the world (or at least your part of it) with a little help from

## APPLIED ENGINEERING

### 12 BIT, 16 CHANNEL, PROGRAMMABLE GAIN A/D

- All new 1984 design incorporates the latest in state-of-art I.C. technologies.
- Complete 12 bit A/D converter, with an accuracy of 0.02%
- 16 single ended channels (single ended means that your signals are measured against the Apple's GND) or 8 differential channels. Most all the signals you will measure are single ended.
- 9 software programmable full scale ranges, any of the 16 channels can have any range at any time. Under program control, you can select any of the following ranges:  $\pm 10$  volts,  $\pm 5V$ ,  $\pm 2.5V$ ,  $\pm 1.0V$ ,  $\pm 500MV$ ,  $\pm 250MV$ ,  $\pm 100MV$ ,  $\pm 50MV$ , or  $\pm 25MV$ .
- Very fast conversion (25 micro seconds).
- Analog input resistance greater than 1,000,000 ohms.
- Laser-trimmed scaling resistors.
- Low power consumption through the use of CMOS devices.
- The user connector has +12 and -12 volts on it so you can power your sensors.
- Only elementary programming is required to use the A/D.
- The entire system is on one standard size plug in card that fits neatly inside the Apple.
- System includes sample programs on disk.

**PRICE \$319**

A few applications may include the monitoring of

- flow
- temperature
- humidity
- wind speed
- wind direction
- light intensity
- pressure
- RPM
- soil moisture

and many more.

### 8 BIT, 8 CHANNEL A/D

- 8 Channels
- 8 Bit Resolution
- On Board Memory
- Fast Conversion (.078 ms per channel)
- A/D Process Totally Transparent to Apple (looks like memory)

The APPLIED ENGINEERING A/D BOARD is an 8 bit, 8 channel, memory buffered, data acquisition system. It consists of an 8 bit A/D converter, an 8 channel multiplexer and 8 x 8 random access memory.

The analog to digital conversion takes place on a continuous, channel sequencing basis. Data is automatically transferred to on board memory at the end of each conversion. No A/D converter could be easier to use.

Our A/D board comes standard with 0, 10V full scale inputs. These inputs can be changed by the user to 0, -10V, or -5V, +5V or other ranges as needed. The user connector has +12 and -12 volts on it so you can power your sensors.

- Accuracy: 0.3%
- Input Resistance: 20K Ohms Typ

**PRICE \$129.00**

### SIGNAL CONDITIONER

Our 8 channel signal conditioner is designed for use with both our A/D converters. This board incorporates 8 F.E.T. op-amps, which allow almost any gain or offset. For example: an input signal that varies from 2.00 to 2.15 volts or a signal that varies from 0 to 50 mV can easily be converted to 0-10V output for the A/D.

The signal conditioner's outputs are a high quality 16 pin gold I.C. socket that matches the one on the A/D's so a simple ribbon cable connects the two. The signal conditioner can be powered by your Apple or from an external supply.

#### FEATURES

- 4.5" square for standard card cage and 4 mounting holes for standard mounting. The signal conditioner does not plug into the Apple, it can be located up to 1/2 mile away from the A/D.
- 22 pin, .156 spacing edge card input connector (extra connectors are easily available i.e. Radio Shack).
- Large bread board area.
- Full detailed schematic included.

**PRICE \$79.00**

### DIGITAL INPUT/OUTPUT BOARD

- Provides 8 buffered outputs to a standard 16 pin socket for standard dip ribbon cable connection.
- Power-up reset assures that all outputs are off when your Apple is turned on.
- Features 8 inputs that can be driven from TTL logic or any 5 volt source.
- Your inputs can be anything from high speed logic to simple switches.
- Very simple to program, just PEEK at the data.
- Now, on one card, you can have 8 digital outputs and 8 digital inputs each with its own connector. The super input/output board is your best choice for any control application.

The SUPER INPUT/OUTPUT board manual includes many programs for inputs and outputs. A detailed schematic is included.

#### Some applications include:

Burglar alarm, direction sensing, use with relays to turn on lights, sound buzzers, start motors, control tape recorders and printers, use with digital joystick. **PRICE \$69.00**

Please see our other full page ad in this magazine for information on Applied Engineering's Timemaster Clock Card and other products for the Apple. Our boards are far superior to most of the consumer electronics made today. All I.C.'s are in high quality sockets with mil-spec. components used throughout. P.C. boards are glass-epoxy with gold contacts. Made in America to be the best in the world. All products compatible with Apple II and //e.

Applied Engineering's products are fully tested with complete documentation and available for immediate delivery. All products are guaranteed with a no hassle three year warranty.

# BACK UP YOUR DISKS

EDD is the most powerful disk duplicator available for your Apple™ computer. Unlike the copycards, which only copy single load programs, EDD backs up more your entire disk. EDD can back up more protected software than all other copy programs or copycards put together. Since EDD is automatic, you will no longer have to change parameters to duplicate most disks, although every parameter is fully documented in our extensive manual. We also provide updated EDD program lists.

**\$79<sup>95</sup>**

Plus \$2 postage  
(Outside US)  
(CA residents  
add 6%)

Runs on: 48K Apple II,  
II plus, IIe, or III (emu-  
lation mode) with 1 or 2,  
3.3 drives

## ESSENTIAL DATA DUPLICATOR III™

- EDD rarely needs parameter changing
- Automatically finds the beginning of each track
- Unlike any of the Copycards, EDD backs up the entire disk, not just what is in memory
- Accurately finds "auto-sync" bytes and their lengths
- Can copy 1/4 and 3/4 tracks

CIRCLE 219 ON READER SERVICE CARD

that is on the screen, no matter how random, and runs it through a cycle of automatic mirrorings until it becomes a symmetrical pattern.

It's really a wonderful program, albeit annoyingly slow because it spends so much time switching from one menu-driven module to another, and I hope that it—or its update—is back in general circulation soon.

### Painter Power

Painter Power is the reincarnation of Jackson Pollack as a computer painting program. You design your own brush shape or work with one of the program's presets, and then set it into motion. By steering the brush with a joystick or game paddles and putting the brush "down" or "up" with the game buttons, you can create intricate abstract designs in a short time.

In a sense, it is freer than the other electronic painting programs, chancier, more experimental. It's almost like art as a video game, with more and more risks coming your way as you advance to faster brush moves and more ambitious levels of the program.

I highly recommend Painter Power for its limbering, stretching effect on your visual creativity, and its capacity for "jamming"—real-time, spontaneous visual creation—beats every other program discussed in this article. I have seen its creator, Eric Podietz, hold his own in computer-music jam sessions (at the annual Symposium on Small Computers in the Arts, in Philadelphia), frantically manipulating the joystick and keyboard of his Apple and keeping a large audience vastly entertained with the visual shenanigans that were happening on the large-screen projection TV.

The manual is *very* tough to follow, though, and will frustrate you greatly at first. Persevere. For one function alone—the ability to create a brush and then make that brush move in a pattern identical to its own shape—if no other, it's worth the price of admission.

### Enie-meenie

So, we have nine programs. How do you choose?

The best answer may be "don't." Start out with one that matches the intensity of your interest and the extent of your pocketbook. Micro-Illustrator and the KoalaPad are a good combination in that regard. Then go on from there, acquiring other software packages and hardware as your interest grows and your needs change.

All of these packages are good, and with the possible exception of the original Apple Graphics Tablet software,

# IF YOU OWN AN APPLE® COMPUTER, YOU'VE GOT CONNECTIONS AT CHEMICAL BANK.

Connections you can use to do most of your banking right in your own living room.

Introducing PRONTO®, the home banking system from Chemical.

PRONTO offers money management and banking services 24 hours a day. And does it all with the help of your IBM, Apple, or Atari computer, and your telephone.

With PRONTO, you can check

CIRCLE 365 ON READER SERVICE CARD

none has been completely outdone by any of the others. So why not have more than one? To an Apple, a hi-res screen image is a hi-res screen image. Once you've stored it on a diskette, you can transfer it from one program to another with relative ease and bring the best functions of each to bear upon your creation.

I invested in a game-paddle expander with two zero-insertion-force sockets and a selection switch, so I could move back and forth between the KoalaPad, game paddles, and the joystick at will. I took the plastic tablet overlays that came with the Apple Graphics Tablet and Designer's Toolkit software and taped them both down to the tablet so I could see both sets of commands at the same time and use the tablet's grid overlay with the Toolkit's printed-on protractor. They work great together.

Above all, experiment freely. Let

your creativity blossom and carry you ahead, because that's where the future lies. The 16-color future.

You see, if you have a IIe and an extra 64K of memory in the form of the right 80-column card, then you aren't limited by the eight-color shackles of the normal Apple hi-res page. Instead, you can use what is called the "double hi-res" mode and paint with 16 colors of light and no color anomalies at all. Doublestuff Software, in Brooklyn, New York, already has a package out that takes advantage of this new color-mapping screen, and all the other paint-program manufacturers are making enhanced revisions to their packages.

During the Renaissance, painters talked of working with *chiaroscuro*, the careful creation of the illusion of light and shade, but there's no need to work with illusion any longer. It's a colorful future, indeed, and it's already here. +

## AND FILE-TRANSFER SOLUTIONS

To help you use your Lisa and your Apple III more efficiently, we are reprinting a section of an in-house manual, *Lisa Solutions*, from Apple Computer. This section covers text-file transfer between the Lisa and the Apple III.

### TEXT FILE TRANSFER BETWEEN LISA AND THE APPLE III PERSONAL COMPUTER

**Objective:** To allow a Lisa, equipped with LisaTerminal, to communicate with an Apple III Personal Computer, equipped with Access III.

**Solution:** Communication between the Lisa and the Apple III requires the following:

- A Lisa equipped with LisaTerminal
- An Apple III equipped with Access III
- A standard communication cable
- A modem eliminator (full modem) cable

Using the following method, you can communicate either character-by-char-

acter information or entire files in either direction. The following description covers communications with an Apple III Personal Computer located near your Lisa only. If you want to communicate over telephone lines, you must replace the null modem cable with a modem for each computer.

#### Setting up to communicate

Upon opening a new sheet of LisaTerminal paper, open the computer compatibility dialog box. The figure below is an example of a Lisa set up to communicate with an Apple III system.

To set up the Apple III, boot up Access III and enter the setup mode by hitting the Open-Apple key and the S key simultaneously. Using the cursor arrow keys, set up the following characteristics:

- ANSI mode
- Send LF after CR
- 7 bits per character
- Enable XON/XOFF
- Half duplex
- Wraparound
- Parity: None
- Any settings not specifically mentioned

can be set to your convenience. The baud rate should be set to the same value as the Lisa baud rate. Hitting Ctrl-S saves the values entered. To communicate, select resume terminal mode.

#### Communicating

Plug the communications cable and the modem eliminator together. Plug one end into the selected Lisa serial connector B and the other into the connector on the back of the Apple III system. It does not matter which end goes where.

If LisaTerminal and Access III are both running and set up correctly, communication is now established. If you type in your LisaTerminal document, the characters appear on both computers. Similarly, if you type on the Apple III, the characters should appear both on the Apple III and the LisaTerminal screen area.

To send information to the Apple III, open the Lisa document, copy the section that you want and paste it into the bottom of the screen area of your LisaTerminal document. To send a file to Lisa, set the 'remember/forget' field of the comfort characteristics dialog box to remember. On the Apple III, enter 'setup mode' and select 'exit terminal mode.' From the main menu select 'transmit a file,' then press return. Select the file to be transferred by specifying the complete file pathname.

**Note:** Only ASCII files may be transmitted in this manner. +

#### File/Print Edit Setup

Connector:	<input type="checkbox"/> Serial A	<input checked="" type="checkbox"/> Serial B	Cancel
Parity:	<input checked="" type="checkbox"/> None	<input type="checkbox"/> Even	<input type="checkbox"/> Odd
Handshake:	<input type="checkbox"/> None	<input checked="" type="checkbox"/> XOn/XOff

Auto New-Line:	<input checked="" type="checkbox"/> On	<input type="checkbox"/> Off	
Communication:	<input checked="" type="checkbox"/> On (On-Line)	<input type="checkbox"/> Off (Local)	OK

The Lisa must be configured exactly as shown with the following exceptions: either connector may be selected, as defined in preferences. The baud rate may be set to any desired value as supported by Access III (note: the serial A connector does not support 3600 baud communications).

Figure 1: An example of a Lisa set up to communicate with an Apple III system.

# Your Apple's telephone. Hayes™

"Thanks for the prompt reply. Sure was a lot faster than waiting for the mail!"

"Gary: The pedigrees for next week's auction are as follows..."

"Attn. Prod., Sales, Purch.: Recommend 50% blue, 30% red screen for closest match!"

**A complete plug-in communications system for Apple® computers.** From Hayes, the established telecomputing leader: the simple but sophisticated Micromodem II® plug-in board modem and its companion software, Smartcom I.™ Everything you need to expand the world of your Apple II, IIe, II Plus and Apple III. In one, convenient communications package.

With Micromodem IIe and Smartcom I, you can access data bases, bulletin boards, and the varied resources of information services. Plan your travel itinerary via computer, including flight numbers, hotel and rental car reservations. Retrieve and analyze daily stock and options prices. Work at home and send reports to your office. You can even do your gift shopping by computer!

**Micromodem IIe. Think of it as your Apple's telephone.** It allows your computer to communicate with any Bell-103 type modem over ordinary telephone lines, at 110 or 300 bits per second. Micromodem IIe installs easily in an expansion slot, and requires no outside power source. It connects directly to either a single or multiline modular phone jack, to perform both Touch-Tone® and pulse dialing.

Micromodem IIe dials, answers and disconnects calls automatically. And, unlike some modems, it operates in full or half duplex, for compatibility with most time-sharing systems.

A built-in speaker lets you monitor your

calls when dialing. That way, you'll know if a line is busy. With Smartcom I, Micromodem IIe automatically redials your last number.

Discover how Micromodem IIe can help maximize the capabilities of your Apple. While Smartcom I software will minimize your efforts.

**Smartcom I companion software. For effortless communications.**

Whether you're a newcomer to personal computing or a seasoned professional, you'll appreciate the ease and speed with which you can perform any communications function. Thanks to Smartcom I!

Let Smartcom I guide you through a few easy-to-answer questions to tailor the program to your particular needs. Then you're ready to go!

Make a selection from the Smartcom I menu to manage your communications, files or printer. Program prompts guide you along the way. And menu selections let

you easily make a call, end a call, or answer a call. When you're on the receiving end, your Micromodem IIe answers automatically, even if you're not there!

Convenient! And so is the Smartcom I memory for phone numbers. Smartcom I stores three of your most frequently called telephone numbers and one prefix. Plus, it also remembers the last number dialed.

Smartcom I also provides a directory of the files stored on your disk. And lets you create, list, name, send, receive, print or erase files right from its menu.

Smartcom I is as versatile as you need it to be. It accepts DOS 3.3, Pascal, CP/M™ 3.0 or CP/M Plus™ operating systems. And accommodates up to six disk drives and several printer interface cards.

Like all our products, Smartcom I and Micromodem IIe are backed by excellent documentation and full support. Including a two-year limited warranty on Micromodem IIe and a 90-day warranty on Smartcom I!

See your dealer today. Then plug into the exciting world of telecomputing.

# PRO-MODEM 1200

## It's about time.

Time for your computer to make the telephone connection – with an intelligent, full 212A 300/1200 baud modem – with a real time clock/calendar – and with the capability to expand into a complete telecommunications system. It's time for PRO-MODEM 1200. Much more than just a phone modem.

When you're on-line, time is money. PRO-MODEM telecommunication systems help you save. By monitoring the duration and cost of your phone calls. And by sending and receiving messages, unattended, at preset times when the rates are lower. . . with or without your computer.

Compare the \$495 PRO-MODEM 1200 with any other modem on the market. For example, you'd have to buy both the Hayes Smartmodem 1200 plus their Chronograph for about \$950 to get a modem with time base.

PRO-MODEM 1200 is easy to use. A convenient "Help" command displays the Menu of operating command choices for quick reference whenever there's a question about what to do next. Extensive internal and remote self-diagnostics assure that the system is operating properly. Some of the other standard features include Auto Answer, Touch Tone and Pulse Dialing, and Programmable Intelligent Dialing.

PRO-MODEM does more. It lets you build a full telecommunications system with features like Auto Dialer, Incoming and Outgoing Message Buffering, Business/Personal Phone Directory, Programmable Operating Instructions, a 12-Character Alpha-Numeric Time and Message Display, and versatile PRO-COM Software. PRO-MODEM commands are Hayes compatible so you can use most existing telecommunications software without modification.

There's much more to the PRO-MODEM story. See your local dealer for complete details. He'll show you how to save time. And money.

Prometheus Products, Inc., 45277 Fremont Blvd., Fremont CA 94538, (415) 490-2370

## PROMETHEUS

## THE MACINTOSH AT WORK/BY THOM HOGAN

A search for practical applications

# USING MACPAINT ON THE MACINTOSH

If you've already purchased a Macintosh computer, you've probably discovered what many have: The MacPaint program is the most addicting piece of software yet. Even the LisaDraw program doesn't have quite as much appeal as MacPaint does.

I've watched as otherwise serious businesspeople sit down in front of a Mac and spend three or four hours just doodling with MacPaint. Indeed, I'm the first to admit that since I got my Macintosh in mid-December 1983, I've used MacPaint more than half the time to satisfy a need for mindless experimentation that seems to overtake me.

Such testimony might make you wonder if you can do anything practical with the Macintosh and the MacPaint program. The manuals that accompany the Mac contain few suggestions of what to use the MacPaint program for and even fewer details on how to proceed. In addition, the manuals fail to point out some major limitations of the program.

### Loading up with Blanks

The first practical function I decided

I should use MacPaint for was to create a blank letterhead. I reached this conclusion since, once I had created the logo, I could use the Clipboard buffer to move it to another drawing or to text I created with MacWrite.

The process of creating a logo for letterhead is simple:

1. Use MacPaint to create the logo,

 **The MacPaint program is the most addicting piece of software yet.**

2. Use the Select Window icon to outline your logo,

3. Use the Edit pull-down menu to copy the logo to the clipboard,

4. Exit from MacPaint,

5. Start MacWrite,

6. Use the Edit pull-down menu to copy the logo from the clipboard to the display, and

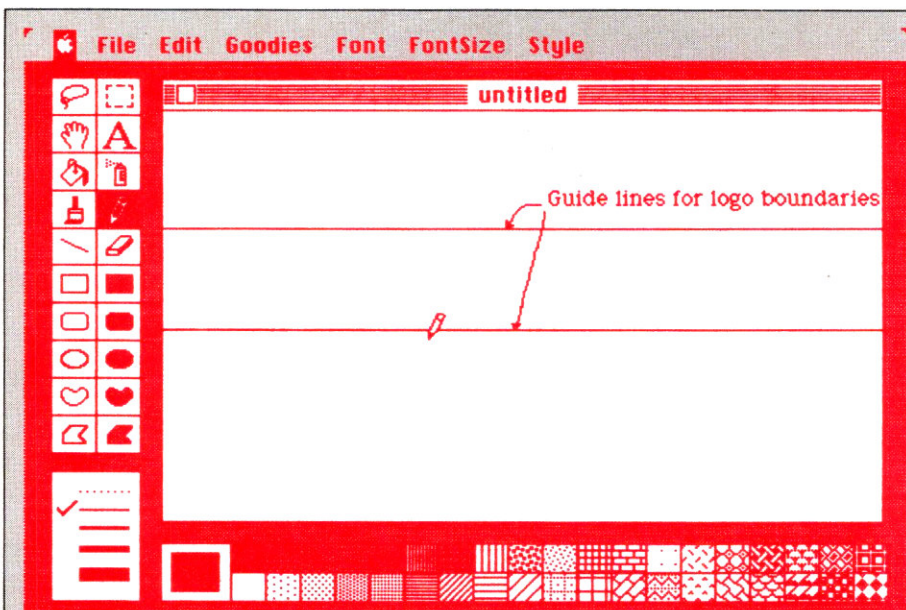

7. Save the resulting sheet of paper; use a filename such as LOGO or Blank Letterhead.

One of MacPaint's limitations shows up even in this simple exercise. Since the drawing screen (window) represents only about a third of a page vertically and two-thirds of a page horizontally, the size of your logo is limited. This restriction won't present problems when you create letterhead, because you won't normally want to fill too much of the page with your logo and address. Figures 1.1-1.3 show three screens that illustrate the logo-creation process.

When you want to type a letter on your letterhead, first duplicate your blank letterhead; then call up MacWrite by pointing to the Copy of Blank Letterhead icon and clicking the mouse button twice. Enter the body of your letter. When you're done, save the letter using the Save As menu choice.

I've taken this letterhead-creation scheme two steps further: first, I created a few stock letters, to which I add only the date and the name and address

standing!). I can tolerate the diskette switching this system entails, at least until someone comes out with a hard-disk drive for the Mac. (One note of caution: Label every Mac diskette with the name that appears underneath the diskette icon; if you don't, you may have to insert all your Mac diskettes until the Finder encounters the one it wants.)

#### Forms Conclusion

Having created my basic "working papers," I decided to use MacPaint for another practical function: creating forms. Unfortunately, what sounds great in practice is next to impossible in reality.

For instance, you would expect to be able to create a form—say an invoice—and then fill it in, using MacWrite. MacWrite does not allow you to type text over a drawing, however, which rules out using MacPaint to draw the form (unless, of course, you want to draw the form line by line, typing text between the lines).

Using MacWrite to create the form also proved troublesome. Since most

**▶ The Macintosh lets you read in several diskettes sequentially.**

forms consist of boxes, the basic idea is to create the horizontal lines for the boxes with a large-size font (24-point Geneva, for instance) and fill in the boxes with a smaller-size text (such as 12-point Geneva), adding vertical lines as you go. MacWrite prevents you from taking this approach, however. When you move the cursor to an area to start typing, the font size changes to that of the line at that spot. Changing the font size after moving the cursor results in the line moving ahead of you as you type because MacWrite is in the Insert mode. Thus, you have to create your boxes by double-spacing and using a single font size. Proportional spacing and nonextending vertical characters result in a poor approximation of a form, as you can see in figure 2.

Alas, this seemingly perfect practical use of the Macintosh and its software is, in practice, extremely disappointing—you could do just as well with almost any computer currently available (indeed, my Osborne Executive and Diablo 630 do a better job

Figures 1.1-1.3: Three of the steps in creating a logo

of the letter's recipient and perhaps a few customized lines; second, I created a file folder called Masters in which I keep my blank letterhead and stock letters.

If you follow suit, you'll find yourself confronting another of the Macintosh's limitations: disk space. On the pre-release Write/Paint diskette I've been using, the system file takes up 141K, MacPaint 60K, MacWrite 52K, the Finder 45K, and the Imagewriter drivers 17K. Miscellaneous odds and ends fill up all but about 30K of the remainder of the diskette—I'll never get many master forms and letters onto this dis-

kette!

The Macintosh lets you read in several diskettes sequentially (the pre-release software I'm using allows up to three diskettes), which offsets the dearth of on-line disk space. The Mac remembers what files are on which diskettes, prompting you when a certain diskette is needed.

I've developed the habit of turning on the Mac first thing in the morning and having the computer read the directories from my Write/Paint, Masters, and Current Data diskettes. I do not turn the machine off until the end of the day (electricity bills notwith-

# WILDCARD™

Make back-up copies of protected software quickly, easily, with just a push of a button.

Now! Three different models of the leading copy card. One is right for you.

**WILDCARD** \$109<sup>95</sup>

**WILDCARD 2** \$139<sup>95</sup>

**WILDCARD PLUS** \$169<sup>95</sup>

Wildcards are the copycards that stack the deck in your favor. Rather than copying protected disks track by track like the old "nibble copiers," Wildcards ignore the disk and any copy protection on it. Instead, Wildcards take a snapshot of your Apple's memory. This creates an accurate copy of the original program.

## WILDCARD

**Our original. Perfect for the Apple II+® with 64K. Over 10,000 satisfied customers.**

- Wildcard copies both 48K and 64K programs.
- Wildcard creates DOS 3.3 compatible, autobooting copies.
- 40 column text screen dump.
- Files can be placed on a hard disk.
- Wildcard Utility Disk (included) contains: Automatic program compression and BRUN filemaker, Applesoft recover program—makes locked up Applesoft programs listable. Print graphics screen.

## WILDCARD 2

**Designed for the Apple IIe® with 64K or 128K.**

- Fast! Copies 64K programs in 25 seconds, 128K programs in 50 seconds.
- New, self-prompting software. Absolutely no technical expertise is required.
- Text screen dump has been enhanced to print 40 or 80 columns.
- Utility Disk is included for making BRUN files.

**IMPORTANT NOTICE:** WILDCARDS are offered for the purpose of enabling you to make archival copies only. Under the Copyright Law you, as the owner of a copy of a computer program, are entitled to make a new copy for archival purposes only and the WILDCARDS will enable you to do so. WILDCARDS are offered for no other purpose and you are not permitted to utilize them for any other use, other than specified. Software is not copy protected.

CIRCLE 169 ON READER SERVICE CARD

## WILDCARD PLUS

The most powerful utility card you can buy for your Apple. A 6502 microprocessor makes Wildcard Plus the ultimate copy and utility card.

### Copycard features:

- Lightning fast. Copies 64K software programs in 10 seconds, 128K software in 20 seconds. Copying software is simple, elegant and flexible.
- You can control the Apple's softswitch settings...

### Utility card features:

- 4K of RAM on the Wildcard Plus is used to upload powerful Utilities from disk. These utilities include an enhanced monitor that allows you to make program changes and fix program bugs. Another is a screen dump of text and graphics. And more...

than does the Macintosh and Image-writer combination!).

### The Best-Laid Plans

Despite my initial disappointment in trying to make the Mac do something practical that other computers can't, this computer does shine in some areas.

Art designers—magazine illustrators, advertising layout artists, and the like—will have a field day with MacPaint. For them, the Macintosh and MacPaint offer all the abilities of paper and pen, with the added advantages of electronic manipulation. The Stretch, Constrain, and Copying functions of MacPaint let you quickly modify basic illustrations in ways that used to be impossible without high-cost equipment.

I finally discovered some of MacPaint's practical abilities by fooling around with some ideas about how to remodel my house. At first, I just used MacPaint as a sketchpad, using crude box drawings to try different arrangements of rooms. The more I fiddled around, however, the more I became intrigued with the idea of actually drawing the final plans on the Macintosh. In doing so, I discovered just how useful MacPaint can be when you make a concerted effort to use its full abilities.

Let me describe some of the highlights of my architectural meanderings with MacPaint. As you read this, you'll surely pick up a few tips or ideas that you might not get from reading the MacPaint manual.

My first step was to decide how to arrange my drawing. Normally, residential architectural plans are drawn to a 1/4-inch scale—that means each quarter inch represents one foot. If you put MacPaint into the Grid mode (in which the mouse lets you position the cursor only at certain fixed locations), you'll find about 70 positions across the page and almost 90 down the page. Thus, the grid lets you draw most plans at a scale of one unit equivalent to one foot. On this scale, the second fattest of the four line widths MacPaint offers is close to being equivalent to a four-inch wall (actually 4/9ths of a foot—erasing one bit-width later using the FatBits mode gives an exactly four-inch wall, just what we need for most single-story dwellings).

Instead of using the Grid command on the Goodies pull-down menu, I simply fill the page with dots one grid-space apart (see figure 3). The reasons for this approach are two-fold. First, I want to be able to put a wall anywhere, not just on a grid mark. Second, when you're in the Grid mode, your lines are

centered on the grid marks. If the final plans are going to be correct to scale, we can't accept this limitation. I do draw preliminary plans in the Grid line-drawing mode, however, since having the Macintosh figure out the location of a grid mark is substantially faster than the manual method of doing so in the FatBits mode.

On the other hand, when we begin later to draw single-bit-wide lines that

## ▶ The Macintosh and MacPaint offer all the abilities of paper and pen.

occur on foot-wide boundaries (kitchen counters, shelving, and so on), do turn the Grid mode on, since it will help you line things up quickly.

Another thing you soon learn when you try to do something as complex as an architectural drawing is the advantage of creating broad strokes first and using FatBits to modify the result later. For instance, to draw a dotted line (to indicate a shelf above floor level or to show open beams across an area), I draw a solid line and then erase every fourth dot, using FatBits.

Likewise, you use FatBits to draw and refine common objects such as the refrigerator, washer, and dryer with the Box icon.

The MacPaint manual doesn't explicitly say so, but most functions work fine in FatBits—enter the FatBits mode, select the Box icon, position your cursor at the upper left corner of the de-

sired box, hold down the button, and pull the mouse to the bottom right corner of the box before letting go of the button.

Yet another thing you'll learn as you start using MacPaint for something serious, such as architectural drawing, is that MacPaint doesn't have an icon builder. In other words, you can't create one symbol—say a circle with two lines through it, to represent a wall socket—and then pop it onto the drawing by pressing a key.

You can copy an existing portion of a drawing, however, which is how you "cheat" to draw all those wall sockets quickly. Create your symbol outside the regular area of your drawing. Use the Select Area icon to outline the symbol you've created. Move the mouse into the outlined area—the cursor should become an arrow instead of a cross-hatch. Next, press and hold the Option key to create a copy, and press and hold the mouse button while moving the copied symbol to its destination. Release the mouse button to leave a copy, and press the mouse button again to move another copy to a new location.

# System Saver® didn't become the Apple's number one selling\* peripheral by being just a fan.

What made over 100,000 Apple® owners fall in love with System Saver? The answer is simple. It's the most versatile, most convenient, most useful peripheral ever made for the Apple.

## System Saver filters out damaging AC line noise and power surges.

70-90% of all microcomputer malfunctions can be traced to power line problems.\*\* Problems your System Saver guards against.

Power line noise can often be interpreted as data. This confuses your computer and produces system errors. Power surges and spikes can cause severe damage to your Apple's delicate circuitry and lead to costly servicing.

System Saver clips surges and spikes at a 130 Volts RMS/175 Volts dc level. A PI type filter attenuates common and transverse mode noise by a minimum of 30 dB from 600 kHz to 20 MHz with a maximum attenuation of 50 dB. You end up with an Apple that's more accurate, more efficient and more reliable.

## System Saver makes your Apple more convenient to use.

No more reaching around to the back of your Apple to turn it on. No more fumbling for outlets and cords to plug in your monitor and printer. System Saver organizes all your power needs.

It functions as a multi-outlet power strip with two switched outlets. Plus System Saver offers the ultimate convenience; a front mounted power switch for fingertip control of your entire system.

## System Saver lets your Apple keep its cool.

Today's advanced peripheral cards generate heat. In addition, the cards block any natural air flow through the Apple IIe creating high temperature conditions that shorten the life of the Apple and peripheral cards.

System Saver's efficient, quiet fan draws fresh air across the mother board, over the power supply and out the side ventilation slots. It leaves your Apple cool, calm and running at top speed.

So if you want to keep damaging heat, line noise and power surges out of your system for good, pick up the only peripheral that's in use every second your computer is in use. The System Saver. You'll soon come to think of it as the piece Apple forgot.

## Compatible with Apple stand

\$89.95 at Apple dealers everywhere.

251 Park Avenue South, New York, NY 10010

\*Softsel Computer Products Hot List. \*\*PC Magazine, March 1983.

System Saver is UL Listed. System Saver's surge suppression circuitry conforms to IEEE specification 507 1980, Category A. Available in 220/240 Volts, 50/60 Hz.

System Saver is a registered trademark of Kensington Microware Ltd. © 1983 Kensington Microware Ltd. System Saver is patent pending.

In this manner, I created one wall-plug symbol, copied that symbol to all the places on walls represented vertically where wall sockets were supposed to go, and used the Rotate function to make the symbol useful for the walls represented by horizontal lines in my drawing. Within a minute, all the wall sockets were in place. The same method worked well for wall switches (T's) and lights (crosshatches with a circle around them).

Since I need most of the symbols I'm working with for every drawing, I made one copy of each and put it in a box on the side of my drawing. Before saving my entire drawing, I saved the box of symbols to the Clipboard buffer.

Later, I came back to MacPaint, copied the Clipboard buffer to my piece of paper, and saved the boxed symbols as a file. So, when I do architectural drawings in the future, I'll simply copy the boxed symbols to my blank sheet of paper and begin drawing.

The last thing you add to your drawing is the text. In some cases, you'll accidentally overwrite some of your drawing, but with practice, you'll be able to estimate how much room the various fonts take and how to position the cursor so that your drawing isn't destroyed when you enter text.

One particularly troublesome problem arises when you type text and later

**▶ The complexity of the pattern usually dictates which method I use.**

use the Fill function to put a pattern in the area that the text occupies. More often than not, the pattern overlaps part of the text, making it unreadable. I deal with this difficulty in two ways: sometimes I box the text so that the fills won't overlap it, and sometimes I simply use FatBits to erase the offending pattern from around the text. The complexity of the pattern usually dictates which method I use—it's easy to erase a few bits but more difficult to erase complex patterns bit by bit.

Figure 4 shows one of the results of my architectural experimentation on the Macintosh—a single page from a hypothetical house plan. This plan is simpler than what you need to obtain a building permit, but it should give you a good idea of what is possible. Note the boxed text in the lower right corner—

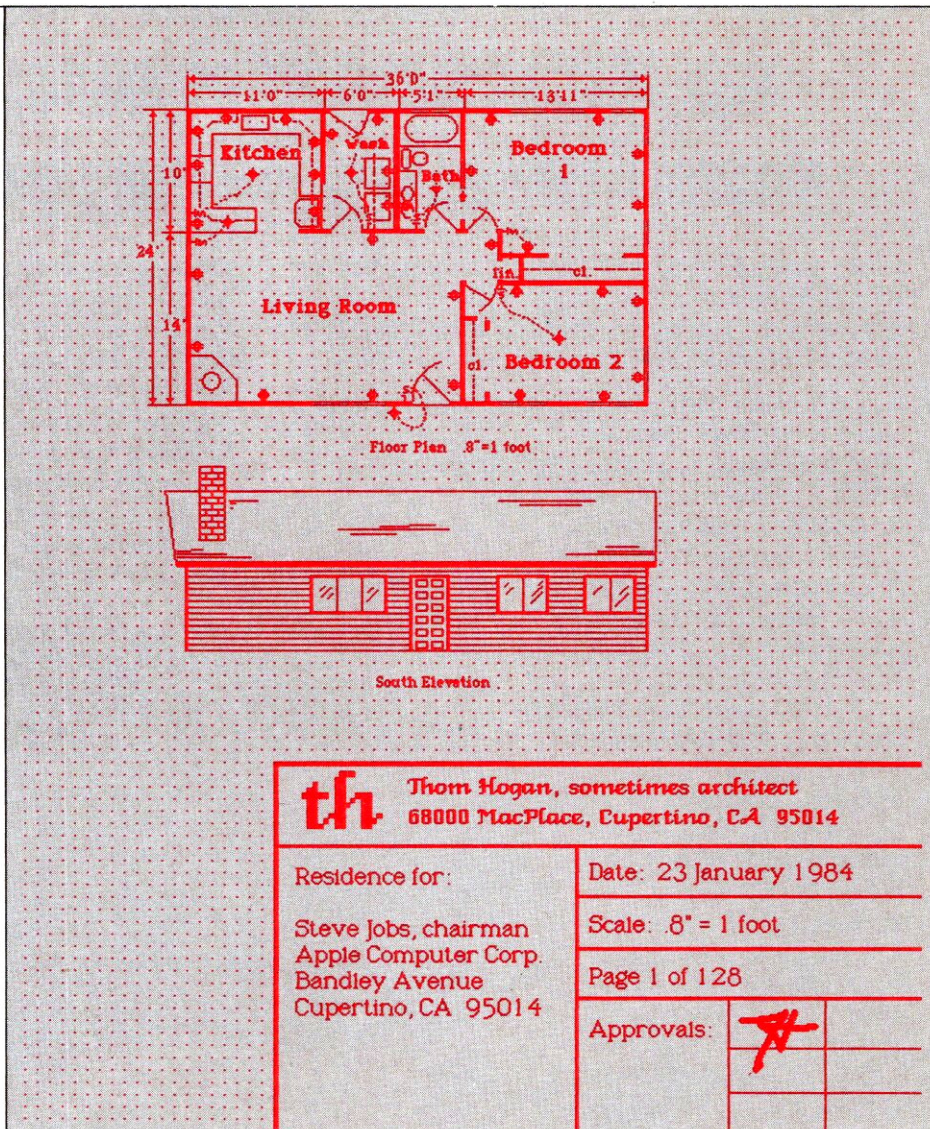

Figure 4: A sample architectural drawing

this is another "predrawn" section that I sometimes bring in, using the clipboard.

Also notice that I've used the grid to align the floor plan (at the top of figure 4) with the elevation (outside view, at the middle of the figure).

Even nonarchitects should find MacPaint's architectural abilities useful from time to time. Consider how useful the Mac would be to prepare new office or home layouts.

You'll probably discover that the order in which you do things with MacPaint directly influences the amount of time you'll need to complete a task.

In general, after a month of drawing every day with the Mac, I've concluded that you must learn to think in terms of backgrounds, foregrounds, detail, and text, in that order, to finish drawings efficiently with MacPaint. When I draw with pen on paper, I start with foregrounds, and add detail, then text, then backgrounds—using MacPaint has

drastically changed the way I draw.

Now I always start a drawing by doing the background. By background, I mean scenery for a cartoon, or possibly just a grid for a chart. The background sets the scale for your drawing. I find that working on the background first is no problem—I just draw the foreground and add details right over it. MacPaint has so many different erase functions, and they're so easy to use, that you can quickly get rid of background that you want to cover up.

Next, I do the main foreground figure of the drawing. If I draw a person, it is the outline of the body; for a house plan, it is the outlines of the walls and main features. As I draw the foreground, I often begin erasing parts of the unnecessary background that I drew earlier.

Once I've completed the main drawing, I add the details. For architectural drawings, I use the special symbols and other detailed items that I've created

# The word is out on word processors.

## Format-II™ ranked number one.

We've always thought of Format-II as the finest, easiest to use word processor for Apple® II+, IIe and Franklin® computers. We're pleased that Peelings II magazine agrees. They judged Format-II best out of 18 leading word processors. Here's why:

### Format-II makes editing easy.

There's our unique editing process: simple, mnemonic commands logically relate to the task you want to perform. To center text, you press [C]. To delete, [D]. To justify, [J].

And since what you see on the monitor is exactly what will print out, editing and formatting is always a breeze.

The Peelings II reviewer said, *"Format-II is one of the few word processors that is so comfortable and predictable, I would consider it as an addition to my small library of personal software."*

### Format-II supports all printers.

Unlike other word processors, Format-II is compatible with every printer that works with the Apple, from the simplest dot matrix printer to the most advanced letter quality printer.

### A built in mailing list at no extra cost!

Actually a database system resembling an index card file. A SORTING program will arrange the mailing list alphabetically or numerically. Powerful LOGIC commands merge specific entries into form letters and documents.

### Peelings II Magazine Rating

Reviewed by John Martellaro, September 1983, based on Peelings II rating system for performance and performance to price ratio.

In the words of the Peelings II reviewer: *"This is the best program I have seen for people who do a lot of work with mailing lists, form letters and short correspondence."*

### An easy to follow manual.

Essential to any good program is a manual that's clear and understandable. The Peelings II reviewer describes the Format II manual. *"All in all, it is one of the best word processor manuals I have seen. The latest documentation is a model of clarity and organization."*

Put it all together. Then add features such as support of hard disk drives and a standard DOS text file format compatible with spellers and communications programs, and it's not hard to see why Format-II has earned the number one rating.

The words of the Peelings II reviewer sum it up: *"I cannot think of another word processor that would be better overall for business use."*

Thanks Peelings II. We couldn't have said it better ourselves.

Figure 5: Charting Apple's growth

## Splitting the Micro Cheese

Figure 6: A pie chart with a difference

and stored. When you're adding your detail, don't forget to look for places where you can add shadowing or highlights to make your drawing look three-dimensional.

The last step in any of my MacPaint drawings is to add text, which frequently goes on top of something else. If you put your text down early and then have to use a Fill function in the area the text occupies, you will get unreadable text. By saving the text till last, you avoid this problem. Since the Mac has so many immediately available fonts, it's also nice to be able to try out several different ones and see their overall effect before committing yourself to one type style.

### Form Follows Function

So, if architectural drawing is one practical use of the MacPaint program, what else can we think up?

Well, how about some dynamite presentation graphics?

Programs such as VisiPlot from VisiCorp and PFS:Graph from Soft-

ware Publishing Corporation, or the graphing functions of Lotus 1-2-3 from Lotus Development Corporation, generate nice, businesslike charts. Usually, you can choose a bar chart, a line chart, a scatter plot, or a pie chart. If you're lucky, you get to specify shading for each section of the chart.

With MacPaint you can do better. The main object of presentation graphics is to get a point across, not to pinpoint specific numerical comparisons. Suppose you want to convey Apple Computer's rapid growth without meticulously charting each quarter's sales. With MacPaint you can quickly put together a professional-looking chart that gets across your main point: Apple went from \$0 to \$1 billion (that's right, billion) dollars a year in just six years. Take a look at figure 5. Wouldn't you say the point is amply clear here?

I created figure 5 by laying out the background grid first. Next, I added and filled in the dynamic upward arrow. The boxes with the product names

came next, after which I filled in the appropriate text (Using FatBits to try to capture some of the spirit of Apple's various logos).

Another thing you can't easily do with traditional graphing programs is add little touches to your work. Figure 6 shows a normal pie chart, with a shadow and a captioned cartoon in the lower left corner. Drawing the pie chart and filling it in took no more than five minutes. I drew the mouse freehand (with the Apple mouse) and then refined it slightly with FatBits—again, less than five minutes' work. So, in ten minutes we have a usable, professional-looking graphic.

We've barely begun to explore the practical uses of MacPaint. Businesspeople will want to use the program to maintain departmental organization charts, an easy process: Draw a box. Surround it with the selection window. Use the keyboard commands to make copies, and use the mouse to place them where they belong. Use the Line Drawing function (with the help of the grid marks) to show the hierarchy. Then fill in the names with the Text function. If you leave out an employee's name, outline the name, use the Edit pull-down menu to invoke the Clear function, and fill in the name.

► In ten minutes we have a professional-looking graphic.

And what else?

How about a calendar laid out the way *you* want it to look (e.g., one that starts at noon and goes to 8:00 P.M. each day)?

Perhaps a poster announcing a company picnic?

This list could quickly become endless. Although the Macintosh and the MacPaint program have their limitations, they also have a lot of ability. While we Mac users are waiting for MacDraw (a drawing program for organized graphics, such as flowcharts, organizational charts, and so on) and MacForm, we'll have plenty to keep us busy while we spruce up our business's graphics.

I'm glad MacPaint is so addicting. Each day I use it I learn a new trick or try a new idea, and my graphic presentations for my books, lectures, and consulting work have never looked better since I started letting Mac do the hard part. +

# Only One Company Offers The First, Most Comprehensive Book About The Macintosh.™

## Sams Books.

Sams presents **INTRODUCING THE APPLE® MACINTOSH**—the first and only comprehensive book about the long-awaited Macintosh computer.

Like the computer itself, **INTRODUCING THE APPLE MACINTOSH** is designed for anyone who wants to improve his business productivity, but doesn't have a lot of time to learn about computing. Its many photos, two-color text and illustrations

provide the technical and factual information you need to learn about the Macintosh fast and easy.

It's written by Edward S. Connolly, a respected computer author and one of the first to use the Macintosh. And like all Sams books, **INTRODUCING THE APPLE MACINTOSH** is easy to read and understand, no matter how much you know about computers.

If you're thinking about buying the Macintosh for your business,

or you already have, this book is a must for you. Watch for other Macintosh books from Sams.

**So for the first, most comprehensive book about Macintosh, get Sams INTRODUCING THE APPLE MACINTOSH, No. 22361, \$12.95. Visit your local Sams dealer. Or call OPERATOR 144 at 317-298-5566 or 800-428-SAMS.**

APPLE II ProDOS!

### THE INFAX 101A, 10 MEGABYTES BIG!

The Infax 101A disk drive subsystem has been designed specifically for Apple\* owners interested in added storage.

The Infax 101A features a removable 10 megabyte data cartridge. Your Apple\* can have almost infinite storage capacity with the new Infax 101A.

Look at the features the Infax 101A offers: ★ Highest performance, reliability of any removable disk drive.

★ Lowest cost 10 megabyte (formatted) data cartridge.

★ More resistant to shock and vibration than any other fixed or removable disk drive.

★ Fastest start/stop (cartridge replacement) time of any high performance disk drive.

★ Non-contact head to disk interface.

★ Micro-processor-based error correction.

★ User transparent error detection and correction.

★ Automatic start-up diagnostics, idle drive shutdown, error recovery procedures.

★ Host adapter/controller and software supports up to 4 drives simultaneously.

★ Cartridge write protect switch.

The Infax 101A comes with disk drive, data cartridge, power supply, cables and personal computer adapter. Software included supports Apple\* DOS 3.3, Pascal and CP/M.\*\* Also included are support software for quick copying, backup and file management. Slot independent. Supports auto-boot capability. 2 chips  
... are  
better  
than  
one

Is your Apple's 6502 processor chip a little overworked lately? Have you been eyeing one of those new, 16-bit systems? But you don't want to give up all your Apple programs ...

Add the powerful 16-bit 8088 processor to your Apple with ALF's Processor Card. Let the 6502 and 8088 work together to tackle your toughest problems—like speeding up your Applesoft and Apple Pascal programs. With the Processor Card, you can use the CP/M™ 86 or MS-DOS™ operating system to run the latest 16-bit software, including many IBM PC programs.

64K or 128K of high-speed memory is available for ALF's Processor Card. Use the Processor Card with 128K as a fast disk emulator or to view sixteen hi-res images in under a second. Or run Basic, C, COBOL, or Pascal with 16-bit performance!

The ALF Processor Card is just \$395 (Applesoft speed-up software included). See your Apple dealer today, or contact ALF for more information.

Trademarks: "Apple": Apple Computer, "CP/M": Digital Research, "MS-DOS": Microsoft.

## RESCUE SQUAD/BY LINDSAY McGRATH

In this session, Rescue Squad answers questions about underlining with Apple Writer, passing control characters and commands with your computer, and PR# commands in Applesoft.

### ASCII Codes and Apple Writer IIe

**Q.** In volume 2, issue 2, you ran a program for entering control characters into Apple Writer II. It looked great, but I can't use it because I use Apple Writer IIe. How can I put an ASCII 0 (NUL) into my Apple Writer IIe?

**A.** Just follow these instructions. Create your Apple Writer IIe document as usual. When you need a NUL (ASCII 0) put a ~ (or any other unused character) in wherever you need a NUL. Then save the document to disk using Control-S.

Now type Control P? to get the print-program menu. Type PD8 to change the print destination to slot 8. This is how Apple Writer prints to disk. Type NP to begin printing. Apple Writer IIe will prompt you for a filename to put the document under. Make sure the name is different from the one you saved it under before, and press Control-S again. Exit from Apple writer and start up a DOS 3.3 disk.

Type in and run the following program:

```
5 ONERR GOTO 200
10 D$ =CHR$(4)
20 INPUT 'APPLE WRITER FILE
   NAME: ':F$
30 PRINT D$: 'OPEN':F$
40 PRINT D$: 'READ':F$
50 REM ** MAIN PRINT-READ LOOP **
60 GET A$
70 PRINT D$: 'PR #1'
80 IF A$ = '~' THEN
   A$ =CHR$(0)
85 REM ** THE CHARACTER BETWEEN
   ' ' SHOULD BE WHATEVER YOU
   USED IN YOUR DOCUMENT **
90 PRINT A$
100 GOTO 60
199 REM ** FINISH PROGRAM AND
   CLOSE FILE **
200 PRINT D$: 'PR #0'
210 PRINT D$: 'CLOSE':F$
220 END
```

This will print out the Apple Writer IIe file with the desired NUL characters. I have used an Apple Parallel Interface Card successfully, but some interface cards may have difficulty with this routine.

### Passing Control Characters and Commands in Apple Writer

**Q.** How can I pass control characters and commands to my printer in Apple Writer?

**Inverse characters are those in which your Apple monitor's normal colors are reversed.**

**A.** You can do this by using the Control-V function ([V]=Control-V). Let's say you want to print elongated characters on an Apple Dot Matrix Printer. To do that, you would type: [V] [N] [V] (Control-V, Control-N, Control-V). Refer to your printer's manual for the appropriate control codes.

For more information on the Control-V function, see the following computer manuals:

- Page 50 in the Apple Writer III manual
- Page 51 in the Apple Writer II manual
- Page 48 in the Apple Writer II manual

To find out what to type on the Apple keyboard for each control code, refer to the following Apple manuals:

- Applesoft BASIC Programmers' Reference Manual—Volume 2 (for IIe only), pages 241 and 242
- BASIC Programming Reference Manual, pages 138 and 139
- Apple III Standard Device Drivers Manual, pages 136 and 137.

### Escaping with Apple Writer II

**Q.** How do I enter an Escape character in Apple Writer II using the Control-V function?

**A.** To enter an Escape character, type the Escape key twice. The first time will give you an inverse caret (^), and the second time will give you an inverse left bracket ([). The inverse left bracket ([) is the Escape character. Inverse characters are those in which your Apple monitor's normal colors are reversed.

If you use a black-and-white monitor, an inverse character will appear in black on a small white background. If you use a green-and-black screen, an inverse character appears in black on a small green background. +

# Picture it!

## Graphics processing that's easy, flexible and fun!

Let PIXIT do the difficult work for you. You don't have to be an artist or programmer, just select predrawn shapes from the "PIXIT" shape library - or create your own! The possibilities are infinite.

### Create A Shape

Create or modify pre-colored or standard HI-RES shapes using simple keystroke commands.

### Shape Table Editor

Combine up to 128 shapes in one table. Add or delete shapes anywhere in table.

### Font Library

A variety of sizes and styles of upper and lower case text fonts.

### PIXIT Shape Library

A convenient selection of pre-drawn shapes, including: Education, business, family fun, arcade, communication, space, safety, 3-D geometrics, cartoon characters, electronic symbols, music and textures.

### User Shape Library

Build your own library of shapes.

### Picture Editor

Create a picture using mixed text and graphics, circles and lines, colorfill, and shape tables. Print the picture, save it to disk for use in other programs or for future editing.

© Copyright 1983 Baudville

### Applications

Animation, charts and graphs, program development, slide shows, program titles, education, games

**No programming skills needed.**

**Works like a word processor for Applesoft shape tables.**

**No additional hardware required.**

**PIXIT** requires a 48K Apple II, Apple II+ or Apple IIe with ROM Applesoft and DOS 3.3

So whether you've just started, or you're a seasoned HI-RES hacker, you'll appreciate the unmatched power and simplicity of PIXIT... and its price.

But that's not all. PIXIT was designed with the classroom in mind. Which means extensive product testing and a professionally developed users guide. Simple menus, a help screen, and friendly documentation make this a productive tool for home, education, business and the arts.

Kids love building blocks. Not just little kids, but big kids, too. Take this fellow named Barnaby, a construction worker. He's erecting a high-rise skyscraper, but time pressure and an assortment of irregularly shaped blocks may cause the architectural wonder of his dreams to crumble before his very eyes.

Highrise, a challenging combination of brain teaser and arcade game, puts you in Barnaby's steel-toed boots. As Barnaby the Master Builder, you run underneath chutes filled with blocks, select one that seems to fit, position it on a springboard, and flip the block onto the pile. After the stack

reaches a certain height, you climb like a human fly to the next, more difficult level.

The game contains five chutes, each filled with four blocks. The blocks measure up to three stories high by three units wide, and most come in a variety of interesting, and sometimes frustrat-

ing, shapes. The lower levels contain simple shapes, such as squares and rectangles.

As you progress through the levels, the blocks become like jigsaw-puzzle pieces—oddly shaped and unbalanced. Generally, the higher the level, the more irregular the shape.

The object of Highrise is to keep building balanced stacks of blocks so you can climb to higher levels. The higher the level, the more points you score.

You can only grab the end

▶ **An assortment of irregularly shaped blocks may cause the architectural wonder of his dreams to crumble.**

block of each chute, which can cause some consternation when none of the end blocks seems to fit on the pile. You then carry the block to the springboard, which consists of six colored segments—white, green, blue, purple, orange, and purple—each measuring one unit wide. These segments correspond exactly to colored segments that form the foundation next to the springboard.

You position a block on the springboard, using the colored segments to figure out where the block will land after it's flipped. Thus, if you place a two-unit wide block on the green and blue segments of the springboard, it will land on the green and blue segments of the foundation.

If a block already rests on those segments of the foundation, your two-unit wide block will land on top of it.

The stack must reach 18

▶ **The object of Highrise is to keep building balanced stacks of blocks so you can climb to higher levels. The higher the level, the more points you score.**

stories before you can climb it. Thus, you must place at least six blocks on the foundation. You can scale all types of blocks, including the skinny three-unit-tall, one-unit-wide types. No matter how uneven the stack looks, if it reaches 18 stories, you can advance to the next level.

On the first and second

levels, most blocks are square or rectangular, so stacking 18 stories is easy. The third and higher levels contain blocks of various shapes and sizes, though. With planning, you can eventually place these esoteric shapes on the pile. Planning does consume time, and the timer ticks off seconds relentlessly. The higher the level, the less time you have to complete the stack.

On the first and second levels, the timer is set at 200 and 170 seconds, respectively. On the third level, it starts at 140, lowers to 110 on the fourth, and drops to a scant 80 seconds on the fifth level. If you misplace a block and cause the stack to come tumbling down, the timer does not reset. Instead, you start rebuilding the stack in whatever time remains.

The game ends when you fail to reach the next level before time expires.

Highrise contains a thoughtful option called the Instructor mode, which lets you play a leisurely game without any time constraint.

The game's controls are fast and responsive. You press either arrow key to move rapidly from chute to springboard and back. You press the space bar to release a block from the chute; pressing it again drops the block onto the springboard. You press the Return key to flip a block onto the stack. You may place more than one block on the springboard before you press the Return key.

The graphics are well done. Your alter ego, Barnaby, complete with hard hat, strides along the bottom of the screen, blocks at arm's length. The blocks come in a variety of colors, including purple, blue, orange, green, white, and an assortment of stripes. You can easily read the time, score, and level across the top of the screen.

The springboard springs up when you flip the blocks onto a stack. The blocks themselves arc gracefully onto the stack. If you place the blocks correctly, the pile remains standing. Otherwise, the stack topples, disintegrating into an avalanche of blocks.

The sound effects are as good as the graphics. A high-pitched chirping sound

▶ **Whether you call it an educational game, puzzle game, or arcade game, Highrise is fast, fun, and exciting.**

signals that Barnaby has taken a block from the chute. A staccato clicking noise accompanies his footsteps, while climbing to the

next level sounds a happy tune. If the stack falls, Highrise gives you a low-pitched electronic chuckle. With ten seconds left on the timer, the game sounds notes with each passing second. When time expires, Highrise sets off an electronic raspberry.

The instructions are only half a page long, and, for once, the brevity is appropriate. Highrise is a simple game. In many ways it is an electronic version of a Parker Brothers game called Blockhead, which Parker Brothers rated for ages four to adult.

MicroLab labels Highrise "educational software" and even markets the game out of its computer-education division. I'm not sure that designer Joe Calabrese had education in mind when he programmed such a fun game. I always thought that educational software taught you a skill such as typing, math, or spelling. I think Highrise only teaches you how to play a better game of Highrise.

Still, whether you call it an educational game, puzzle game, or arcade game, Highrise is fast, fun, and exciting for kids of all ages. Although simple to learn and play, it takes a tremendous amount of skill to master. Highrise towers over most arcade games and rates a full 100 stories.

A name to remember for memory in a hurry

# *flashcard*<sup>T.M.</sup>

disk emulator for Apple® computers.

**Buy  
flashcard,  
get  
WordStar®  
for \$100.**

If your Apple has CP/M® (or you are thinking of adding a CP/M board), here's *the* way to enjoy all the advanced features of WordStar *plus* the lightning fast processing of *flashcard*. And save lots of money in the bargain. (If you already have WordStar, we'll give you the same \$100 price on InfoStar®.) Yes, the popular *flashcard* disk emulator is now bundled with WordStar as well as packaged alone with drive diskettes for DOS 3.3, CP/M and Pascal.

**Why *flashcard*?** A solid state disk emulator gives you the speed of computer memory while maintaining the large storage capacity of a disk. With *flashcard* on your side, you can perform tasks up to ten times faster than with your floppy disk.

Simply plug *flashcard* into your Apple and experience fast, smooth, no-wait computing. No more "disk wait"

messages. No mechanical delays. No more noise as your disk chatters and clatters through a file search. And no wear and tear on your program diskettes. Instead, *flashcard* displays your data the instant you ask for it.

Your computer store should have *flashcard* in stock. If not, ask them to order one for you.

***flashcard* with WordStar**

**144k memory \$449**

**288k memory \$629**

flashcard only, \$100 less

# TRANSPAKS.<sup>™</sup> TRANSMODEMS.<sup>™</sup> ELECTRONIC COMMUNICATIONS FOR PERSONAL COMPUTERS.

MADE  
SIMPLE.

**TRANSEND**  
THE WORLD JUST KEEPS GETTING SMALLER.

The simplest communications solution for your Apple<sup>®</sup> or IBM PC<sup>™</sup> is also the most economical: Transpaks.

Everything for 10% less. Transpaks include everything for instant electronic communications: Your choice of Transend software for Apple or IBM PC (capabilities range from intelligent terminal to unattended electronic mail); and economical 300- or 1200-baud modems designed for the Apple II/IIe or IBM PC.

Each Transpak solution costs 10% less than buying Transend software and modem separately. And it saves you money over competitive communication solutions as well.

Plus valuable subscription offers. Transpaks include subscription offers to THE SOURCE<sup>SM</sup> and DIALOG's Knowledge Index<sup>SM</sup>. Transpaks are preconfigured so you can use them immediately.

Transend products are also available separately. Transend software works with a wide range of popular modems. Transend modems emulate the most common modem protocol to work with any software.

Convenient. Economical. And guaranteed. Choose your Transpak, or any other Transend product. Take it home for a risk-free trial. If you're not satisfied, return the product for a full refund.

For more information, ask for a free copy of *The Who, What, Why, How and When of Electronic Communications* from Transend.

# dBASE II

P A R T V I

---

## In a tutorial series on dBase II, a popular program for database management

---

S

o far in the *A+* series of dBASE II tutorials, we have covered techniques for creating databases, storing information in them, and keeping that information updated. In addition, we have explored almost all of the dBASE II commands for data retrieval, including the use of sorted and indexed databases, as well as the advantages of using the Report command for easy report generation.

This time, we will cover some odds and ends that will help you use more complex commands when you retrieve your data:

- shortening your command line
- adding a record in the middle of your database
- using operators
- string and substring searches
- using the Sum command

### Tutorial Conventions

These tutorials involve numerous examples. Sometimes I ask you to type in a command, and then dBASE II responds. Just to differentiate between what you do and what dBASE II responds with, the lowercase words are the ones you type. Uppercase works too, so it doesn't really make a difference—it's just clearer this way. Some examples may specifi-

cally ask you to type uppercase letters, but these cases always involve a series of words between quotes. The dBASE II responses are usually in uppercase letters. All screen interactions are in larger type to distinguish them from the text.

To make these sections more readable, carriage returns are implied rather than included.

In the command-syntax examples, words between square brackets (e.g. [before]) indicate an optional phrase or "argument."

### Time Savers

So, with no further ado, let's begin. Assuming you are sitting in front of your Apple, try opening a file and looking at its structure:

```
. use <filename>  
. display structure
```

If you have been following along with our tutorial, you may have noticed that several of the regularly used commands (such as this last one) are tedious to type. In case you don't already know, it isn't necessary to type all those letters each time, since dBASE doesn't look at them all. In fact, only the first four letters of a command are of any significance, unless you are referring to a filename, a field name, a field's contents, or a memory variable. Therefore

. disp stru

will do just as well. Two other time savers are

.go top (instead of)  
.goto top

.go bott (instead of)  
.goto bottom

If you are wondering why I waited for six issues of *A+* to give you these tips, here's why. It's better (and easier) to learn the complete command names when you're starting

**▶ It takes a great deal less time to insert a record than to append and sort, and uses fewer commands too.**

out, because the abbreviations don't make a lot of sense.

If you are still not familiar with the commands, you may want to stick with using their full names for a while longer. At any rate, I will continue to spell out entire command names for tutorial purposes. Remember, whenever you refer to things that you created and named (files, fields, and the like), you will have to use the full name; otherwise dBASE will issue an error message of some type.

#### Inserting a Record in the Middle of Your Database

Occasionally you'll have to stick some data into the middle of your database. For example, say you have a very large

sorted database. It may have taken your computer and dBASE several hours to sort it into order. Now you realize that you left out one record! How can you slip this new record into the database where you want it? You could use the Append command and then re-sort the database, or you could use another command designed for just this purpose, Insert.

It takes a great deal less time to insert a record than to append and sort, and uses fewer commands too. As you may recall, sorting creates another database that you have to name. Here's a comparison of the two commands and the time my computer took to complete inserting and sorting a 263-record database on a hard-disk system.

.use phonebk  
.sort on last:name to temp (2 min. 28 sec.)  
.delete file phonebk  
.rename temp to phonebk

.use phonebk  
.goto 10  
.insert (47 seconds)

Still, with large databases the Insert command does, as the dBASE II manual warns, take a bit of time. So beware. Sticking with indexed databases is usually the better bet (see the last issue of *A+* for an in-depth discussion of sorting vs. indexing). Also, you have to consider the time it takes to figure out where in the database you want to insert your new record.

Assuming you have decided to use Insert, here is the syntax:

# New DAVID-DOS II™ Compared With Other DOS's

## Now you can speedup Text-file handling two ways

DAVID-DOS II is a new edition of DAVID-DOS with added speed, commands, and features. New Read, Write and Save routines are high speed. DAVID-DOS II updates full disks like Apple's Master Create. (The programs on your disks are not touched). DAVID-DOS II Inits blank disks with Basic, Binary or Exec HELLO in seconds. Ten new commands operate identical to existing DOS commands. Use them from the keyboard or in Basic programs. They accept A & L parameters.

### Ten New DOS Commands

1. TLOAD speed loads all Text Files, random or sequential, to ram.
2. TSAVE speed saves all Text Files, random or sequential, from ram.
3. TLIST Lists all Text Files, random or sequential to screen/printer.
4. DUMP Memory to screen/printer in Hex with Ascii on right side.
5. DISA disassembles Binary to screen or printer.
6. AL prints last loaded program Address & Length in decimal & hex.
7. HIDOS moves DOS to Language Card & continues operation of program.
8. / is a one keystroke Catalog in addition to the original command.
9. DATE prints with any clock. Also File Dating with clock or manual.
10. FIND prints address's of hex found in 64k memory. Hidocs cmd only.

### Compatible

All DOS entry addresses have been preserved. DOS is original length and compatible with most software. David-Dos II is copyable and creates fully copyable updated disks. DAVID-DOS II is licensed by programmers for inclusion in the software they sell. Init areas were used for David-Dos II. Works with all Apple IIs including Iie 80 Col, Franklin & Hard Disks, such as Corvus & Xebec. Requires 48K. Complete documentation for screen or printing and many utilities are on the disk.

# ELECTRICAL SURGES AND SPIKES CAN BE A REAL SHOCK TO YOUR SYSTEM.

## PROTECT IT FROM CRASHES AND GLITCHES WITH SCOOTER™ GUARD-IT™ CONTROL CENTERS.

Surges and spikes can wipe out hours of data entry. Damage micro circuitry. And drive you crazy. All in a micro-second.

Protect your data, your computer and your peace of mind with a SCOOTER™ GUARD-IT™ CONTROL CENTER, surge protected outlet strip.

Designed for microcomputers, monitors and printers, all SCOOTER outlet strips feature one-switch power control, push-to-reset circuit breakers and attractive sand-color metal case with matching cable and sockets. Plus 100% factory testing.

And they're just part of a whole line of high grade electronic components and computer cable assemblies.

Ask for SCOOTER Power Control Centers wherever you buy computer supplies. And get surges and spikes out of your system for good.

### SCOOTER's POPULAR SP6 GUARD-IT™ CONTROL CENTER

Featuring 6 protected outlets, normal and common mode improved surge protection, surge failure indicator light and full 1-year warranty. **\$49.95**

XP4 GUARD-IT™ CONTROL CENTER  
Extended protection with noise filter and fail-safe feature. **\$74.95**

\*SC6 SCOOTER™ CONTROL CENTER  
Power strip with 6 grounded outlets. **\$27.95**

\*SC4 SCOOTER™ CONTROL CENTER  
Power strip with 4 grounded outlets. **\$25.95**

\*For all applications that do not require surge protection. All prices suggested retail. Visa and MasterCard accepted.

INSERT [before] [blank]

Since the bracketed words are optional, we can use a simple case to start. Create the following database called Camplst (unless you still have it from past issues of *A+*):

STRUCTURE FOR FILE: A:CAMPLIST.DBF  
NUMBER OF RECORDS: 00015  
DATE OF LAST UPDATE: 00/00/00  
PRIMARY USE DATABASE

FLD	NAME	TYPE	WIDTH	DEC
001	Item	C	010	
002	Weight	N	002	
003	Cost	N	005	002
004	Owner	C	010	
**TOTAL **			00028	

00001	BACKPACK	10	65.00	KARL
00002	FOOD	30	45.27	GROUP
00003	RAINGEAR	7	12.95	VALERIE
00004	STOVE	25	85.00	KARL
00005	TENT	12	62.33	LISA B.

Perhaps we want to take a canteen on our camping trip, too. Notice that the database is sorted on Item. Canteen should fit between BACKPACK and FOOD.

First we have to get the record pointer to the correct spot in the database. The Goto command is the easiest way, though anything that works would be fine. Normally, dBASE inserts a new record just *after* the record the pointer is on.

```
. list
00001 BACKPACK 10 65.00 KARL
00002 FOOD 30 45.27 GROUP
00003 RAINGEAR 7 12.95 VALERIE
00004 STOVE 25 85.00 KARL
00005 TENT 12 62.33 LISA B.
```

```
. goto 1
. insert
```

Now your screen should look just as it does during the Append or Edit process. Fill in the blanks with

```
ITEM :CANTEEN :
WEIGHT : 3:
COST : 12.50:
OWNER :FRED :
```

```
. list
00001 BACKPACK 10 65.00 KARL
00002 CANTEEN 3 12.50 FRED
00003 FOOD 30 45.27 GROUP
00004 RAINGEAR 7 12.95 VALERIE
00005 STOVE 25 85.00 KARL
00006 TENT 12 62.33 LISA B.
```

What if you wanted to create an empty record between some other records? This procedure might be useful for dividing records into groups when you list them out, or just as a place holder, reminding you to fill in the blanks later. Here the [blank] part of the command comes into play. For example,

# INCREDIBLY SPREADABLE.

Do spreadsheets faster and easier with complete cursor control on the programmable IIE Tender Keypad.

The Apple IIE\* is a nice computer. Until you try to do a ledger, a VisiCalc\*\* spreadsheet...or for that matter, any program that uses numbers. It could take days.

## Cursors!

What you need is the IIE Tender. It's the Apple\* keypad that gives you cursor control in all directions, as well as four programmable keys which can be permanently defined to any frequently-used key. And redefined at will.

## At your fingertips.

You also get the four mathematical functions, a decimal point, comma, space bar and delete key. Plus, the IIE Tender is human engineered to provide you with a sure touch and less user fatigue, and comes standard with Coupler-Calc software to turn it into a fixed or floating-point calculator. It's even color-coordinated to match your Apple.

You can install the IIE Tender—without taking up an expansion slot—in about five minutes. And our interface allows disconnection in seconds without getting inside.

## Try one.

Try the incredibly spreadable IIE Tender at your local Apple Dealer today. Or write or call us for more information.

CIRCLE 255 ON READER SERVICE CARD

```
. goto 4
. insert blank
. list
```

```
0000 1  BACKPACK    10  65.00  KARL
0000 2  CANTEEN     3   12.50  FRED
0000 3  FLASHLIGHT  5   15.00  CECI
0000 4  FOOD        30  45.27  GROUP
0000 5             0    0.00
0000 6  RAINGEAR    7   12.95  VALERIE
0000 7  STOVE       25  85.00  KARL
0000 8  TENT        12  62.33  LISA B.
```

Notice that character fields are blank and numerical fields are filled with zeros.

Leaving no leaf unturned, Ashton-Tate decided to offer the option of inserting a record *before* the current pointer position. You use the [before] clause:

```
. goto 3
. insert blank before
. list
```

```
0000 1  BACKPACK    10  65.00  KARL
0000 2  CANTEEN     3   12.50  FRED
0000 3             0    0.00
0000 4  FLASHLIGHT  5   15.00  CECI
0000 5  FOOD        30  45.27  GROUP
0000 6             0    0.00
0000 7  RAINGEAR    7   12.95  VALERIE
0000 8  STOVE       25  85.00  KARL
0000 9  TENT        12  62.33  LISA B.
```

Another nifty feature you can use with Insert (as well as Append) is Set Carry On. When you type

```
. set carry on
. goto 4
. insert
```

you should see a record that looks just like the fourth record.

RECORD 00004

```
ITEM      :FLASHLIGHT   :
WEIGHT    : 5:
COST      : 15.00:
OWNER     :CECI        :
```

What has happened? Set Carry On tells dBASE to carry the data from the previous record into the one you are inserting, in order to eliminate unnecessary typing when data is repetitive. Here's the fine print, though. If you just type

**▶ Another nifty feature you can use with Insert (as well as Append) is Set Carry On.**

<Return>, Control-Q, or Control-W when the new record first appears, the program won't insert the record. You must type in at least one letter of the new record, even if it's the same letter that is already there.

One last note: you can insert only one record at a time.

## EARLY WORDS ENGLISH/SPANISH

(Primary; ages 4-7, also ESL and bilingual)

Children just beginning to read will enjoy using this new program for the Apple II computer. A child can develop a 101-word sight vocabulary through five sub-programs. These are: Early Letters, Early Numbers, Early Colors, Early Things, and Early Moves. Generally, matching exercises are used, with words to be matched to pictures in various ways. Upon response (which requires pressing only the 1 or the 2 or the 3 key) the correct picture is matched with the correct word. Teacher options allow setting stimulus and response to either English or Spanish independently.

*Free Back-up*

*Disk in Each Package*

29.95

## EARLY WORDS

(Primary; ages 5-7)

19.95

Developing a sight vocabulary of names for numbers, colors, and familiar objects is the purpose of EARLY WORDS. After completely using the programs, the child should be able to identify the characteristic shape of a letter when color, size, alignment, and type style vary; and have developed a sight vocabulary of the number words (e.g. "thirteen" associated with 13 objects); the color words (ten colors); and names of a variety of familiar objects such as house, bird, frog, etc.

## EARLY WORDS II

(Primary; ages 5-7)

29.95

This disk package builds upon the concepts and styles of operation of *Early Words* and includes more different shapes and things. It adds early moves to the sight vocabulary being developed, as well as spatial relationships. Early sentences will allow a child to produce meaningful sentences at an early stage, by putting together nouns and verbs.

**EDUCATIONAL SOFTWARE FOR APPLE™ MICROCOMPUTERS**

# APPLE MODEM. WITH EVERYTHING.

Now including  
a valuable subscription to  
**THE SOURCE**<sup>SM</sup>  
AMERICA'S INFORMATION UTILITY

# \$129

## THE NETWORKER™ MODEM

Your best buy in modem history. The **Networker**™, a plug-in single-slot direct connect modem for the Apple II family of computers. Send electronic mail to a friend or business associate, use your school's computer, access hundreds of computer bulletin boards or thousands of data bases for up-to-the-minute news, sports, weather, airline, and stock information.

There's absolutely nothing else to buy. You get the modem board, communications software, and a valuable subscription to America's premier information service, **THE SOURCE**™. For \$129 it's an unbeatable value.

This is the modem that does it all, and does it for less. The Apple Communications Card is on board, so no other interface is needed. It's 300 baud, the most commonly used modem speed. And it comes complete with **Networker** Communications Software on an Apple-compatible disk, giving you features **no** modem offers.

**Networker** Communications Software is an easy to use terminal program that turns your computer into a communications command center, with on-screen "help" menus, continuous updates of memory usage, carrier presence, and communication status. Even a beginner can be communicating in seconds.

The **Networker** supports both originate and answer modes, so you can send and receive information, in full or half duplex modes. Just plug it into any slot in your Apple computer, and then into your phone jack. Now you're part of a vast network of computers.

## NETMASTER™ COMMUNICATIONS SOFTWARE

For \$179 we include with the **Networker** our **Netmaster** Communications Software for advanced users. **Netmaster** will let you transfer games, computer graphics, programs, sales reports, documents—in fact, any Apple file of any size—to another computer, directly from disk to disk, without errors, even through noisy phone lines.

For transferring information between computers, **Netmaster's** superb error checking and high speed are an unbeatable combination. With a **Netmaster** on each end, you can transfer information three to five times faster than other communications packages like Visiterm™ or ASCII Express™. Error free.

But **Netmaster's** not stuffy. It will talk to those other communications packages. It's just that they don't work as fast and they don't check errors like **Netmaster**. And **Netmaster** doesn't only work with the **Networker** modem. Even if you already have another modem for your Apple, **Netmaster** is an outstanding value in communications software, so we sell **Netmaster** by itself for \$79. **Netmaster** requires 48k of RAM, one disk drive, and the **Networker** or another modem. It can also be used without a modem when two Apples are hard-wired together.

## THE SOURCE™

Your purchase of the **Networker** with or without **Netmaster** comes complete with a membership to **THE SOURCE**, with its normal registration fee fully waived. **THE SOURCE** will put a world of electronic information and communication services at your fingertips—instantly. Electronic mail and computer conferencing. Current news and sports. Valuable business and financial information. Travel services. A wealth of information about personal computing. Even games. All fully compatible with your equipment, and ready to use at once.

**Networker**, **Netmaster**, and **Networker/Netmaster Combo** are all produced in the USA by ZOOM Telephonics, producers of the popular **DEMON DIALER**. The **Networker** is FCC registered, and all products come with a one-year warranty.

## HOW DO I GET ONE? OR TWO?

Ask your computer dealer, or call one of our sales offices listed below for the dealer nearest you. Or call us direct at 1-800-631-3116, and we'll tell you where to get one. (In Massachusetts, call 1-617-423-1288.)

# Looks like a Ferrari. Drives like a Rolls. Parks like a Beetle.

Ask your computer dealer to take the cover off a world-class disk drive.

The all new, 1984 Indus GT.™

The most advanced, most handsome disk drive in the world.

A flick of its power switch can turn an Atari into a Ferrari.

Or an Apple into a Red Hot Apple.

## **Looks like a Ferrari.**

The Indus GT is only 2.65" high. But under its front-loading front end is slimline engineering with a distinctive European-Gran flair.

Touch its LED-lit CommandPost™ function control AccuTouch™ buttons. Marvel at how responsive it makes every Atari or Apple home computer.

## **Drives like a Rolls.**

Nestled into its soundproofed chassis is the quietest and most powerful disk drive power system money can buy. At top speed, it's virtually unheard of. Whisper quiet.

Flat out, the GT will drive your Atari track-to-track 0-39 in less than one second. Increasing data transfer 400%. (Faster than any other drive. And as fast as any Apple disk drive.)

And each GT comes with the exclusive *GT DrivingSystem™* of software programs.\* World-class word processing is a breeze with the *GT Estate WordProcessor™*. And your dealer will describe the two additional programs that allow GT owners to accelerate their computer driving skills.\*Included as standard equipment.

Also, the 1984 Indus GT is covered with the *GT PortaCase™*. A stylish case that conveniently doubles as a 80-disk storage file.

## **Parks like a Beetle.**

The GT's small, sleek, condensed size makes it easy to park.

And its low price makes it easy to buy.

\$449 for Atari. \$329 for Apple.

So see and test drive the incredible new 1984 Indus GT at your nearest computer dealer soon.

The drive will be well worth it.

# INDUS™

### Some Simple Functions, Operators, and Expressions

dBASE II allows you to ask some pretty sophisticated questions about information in your database. We saw evidence of some of this ability when we covered the List and Display commands several issues back. Now let's consider asking dBASE to do a little more work for us. Even though the Camplist database is small, there are lots of things we might want to know about it. A few examples:

- What do all the costs add up to?
- What is the total weight of the items?
- Which of the items cost more than \$20.65?
- Which items weigh less than 20 pounds, cost more than \$12.50, and are owned by Fred?

In order to go any further in this direction, we'll have to look at some built-in features of dBASE.

#### Operators

Operators are so called because they operate, or act upon, some data that already exists in a database. dBASE II has four basic types of operators and three types of results:

- arithmetic (generate numeric results)
- comparative (generate logical results)
- logical (generate logical results)
- string (generate string results)

#### Arithmetic Operators

For many people, especially those who are new to programming, arithmetic operations are the most familiar. In essence, dBASE II has a built-in four-function calculator with tons of memory for storing its input and answers. You can add, subtract, multiply, or divide, just as if you were using a calculator, or ask dBASE questions about your databases by using these operators.

Let's give the Calculator mode a try first. (The / means

"divided by," the \* means "multiplied by," and the parentheses group the numbers.)

```
. ? 3 + 5
8
. ? 5 / 2 . 5
2 . 0
. ? ( 3 + 2 ) + ( 14 - 10 )
9
. ? ( 3 + 2 ) + ( 14 - 10 ) -
  ( ( 12 . 56 + 3 . 5 ) * ( 126 . 23 / 25 ) )
- 72 . 090 1
```

Were you surprised by how quickly your computer arrived at that last result? It did cost you a bit more than a calculator, didn't it? Also, you can tell by the result of that

**You can add, subtract, multiply, or divide, just as if you were using a calculator, or ask dBASE questions about your databases by using these operators.**

last calculation, should you care to analyze it, that the numbers stored in pairs of parentheses are processed first. Using parentheses is often necessary for obtaining proper results.

Now, instead of just using meaningless numbers for our calculations, let's use data in the Camplist database.

## apple ala modem \$129

Just plug the NETWORKER into a single slot on your Apple II, II+, IIe or Franklin computer, and 300 baud of data communications power is yours. It's that simple! Now "boot" the accompanying software and see the features that no other modem offers:

- Easy to follow on-screen menus, status indicators, and prompts
- Continuous memory usage update

- Text trapping of entire display into RAM memory
- Disk storage capability for all trapped text

No other hardware or software needed, yet this modem can be used with most all Apple compatible software. For the experienced user—ask about the NETMASTER software package which offers greater versatility in communications and many other additional features.

AVAILABLE AT:

NETWORKER	\$129.95
NETWORKER/NETMASTER COMBO	\$179.95

00007  TENT          12  62.33  LISA B.

. goto bottom
. ? cost +weight
  74.33
. ? cost-weight
  50.33
. ? cost/weight
  5.19

```

Adding cost and weight together doesn't make much sense, but as long as both fields are numerical, we can do it.

**▶ If our database had another field in it, we could use the Replace command to fill it with the result of some mathematical calculation.**

Dividing cost by weight, however, gives you the price per pound that Lisa B. paid for her tent. You get the idea. Once we try a few more examples, you will see that this type of

operation can be a real time saver. If our database had another field in it, we could use the Replace command to fill it with the result of some mathematical calculation, which could be handy for an inventory database.

Notice that the calculation involves only the "current" record. Repositioning the pointer would give us different results.

### Comparative Operators

In the case of our Camplist database, the comparative operators will be of most help. As the name implies, these operators compare data to produce a result. "Is X larger than Y?" is an example of comparison operation. Here's a list of the types of comparison operators you can use with dBASE:

<u>symbol</u>	<u>meaning</u>
<	less than
>	greater than
=	equal to
<>	not equal to
#	not equal to
<=	less than or equal to
>=	greater than or equal to

Now, try the following:

```

. display for weight <20
00001  BACKPACK      10  65.00  KARL
00002  CANTEEN       3  12.50  FRED
00003  FLASHLIGHT    5  15.00  CECI
00005  RAINGEAR      7  12.95  VALERIE
00007  TENT          12  62.33  LISA B.

```

## LOCK-IT-UP

DISKETTE COPY-PROTECTION  
AND DUPLICATION SYSTEMS  
FOR THE APPLE COMPUTER

The Lock-It-Up systems are sophisticated, menu driven copy-protection and duplication utilities for the Apple II Computer. They feature several levels of protection which make standard diskettes virtually uncopyable by even the most sophisticated nibble copy programs currently available.

- All sectors on the diskette can still be used.
- Data files can be loaded and/or saved to either the protected diskette or an unprotected diskette.
- Memory will be cleared and the disk will reboot if the reset key is pushed.
- The copying systems support up to 14 disk drives.
- Complete data-verification is optional during copy.
- Sequential serial numbers are assigned to each diskette produced by the system
- Master diskettes created with the system contain an I.D. stamp that you select. The I.D. stamp must be correctly specified before any diskettes can be duplicated. This prevents other Lock-It-Up owners from copying your diskettes.
- Extensive support is provided should you have any problems or special needs.
- Our system is supported by numerous disk copying services should you need a large quantity of diskettes duplicated.

DOS or Pascal systems are available for \$225 each. CP/M system is available for \$695. Each system includes three diskettes, an informative manual, and a non-exclusive license to copy as many diskettes as needed.

### DOS VERSION:

- Any standard DOS 3.3 diskette can be protected.
- DOS command names can be changed, and/or deleted.
- Autorun can be used to prevent the listing of a program or the use of any basic commands outside of a program.
- A faster DOS can be used in order to decrease disk access time by up to 50%!

**REQUIRES: 48K Apple II or II+ with Applesoft in ROM or language system and at least two disk drives.**

### PASCAL VERSION:

- Any standard Apple Pascal 1.1 diskette can be protected.
- Files may be transferred to a standard Pascal diskette, but they will not run unless they are on the protected diskette.
- Easily added to any program by use of a Regular Unit.
- Compatible with Apple Fortran.

**REQUIRES: Apple Pascal and at least two disk drives.**

### CP/M VERSION:

- Any COM file may be protected
  - Additional CP/M utilities included
  - Protected files may be backed-up by user
- REQUIRES: 64K Apple II with Z-80, 56K Microsoft CP/M and at least two disk drives.**

# TRACK A SPACE SHUTTLE ON AN APPLE? YES. WITH MICROSPEED!

At the Jet Propulsion Laboratory in Pasadena, NASA scientists have discovered the power of MicroSPEED. Using this remarkable hardware/software system with an Apple II, they produced a continuous graphic display of the Columbia's position relative to the earth during the second Shuttle mission. This enabled the JPL team to accurately follow the spacecraft in *real time*, and to precisely control its powerful sensors at critical points along the flight path. Surprised that such a demanding project is possible on the Apple? So were JPL's engineers, and many others who have discovered . . .

**THE MICROSPEED DIFFERENCE** This extraordinary Language System exploits the real potential of the microcomputer for the first time. The difference between MicroSPEED and other programming languages is that with MicroSPEED, there is virtually *no limit* to what you can achieve. It may well be the ultimate language for the Apple II, //e and /// (and the IBM Personal Computer). MicroSPEED literally combines the performance of a minicomputer with an

exhaustive set of user-friendly capabilities: hardware math processing, fast hi-res graphics and text, turtle graphics, print formatting, two text editors, unlimited data types, and incredible FORTH extensibility—all at speeds up to 100 times faster than Basic.

**USER-FRIENDLY, EASY-TO-LEARN** Starting with simple commands that are comfortable even for non-programmers, MicroSPEED extends and builds, allowing you to create your own tailored application languages. The capability of your computer will grow exponentially, as you work in an active partnership with the machine, exploring and developing new problem-solving facilities—creating, correcting, refining your increasingly powerful system.

**DEMANDING JOBS AT LOW COST** MicroSPEED has been put to the test in fields as diverse as medicine, the stock market, oceanography, and the arts. In even the most challenging applications, MicroSPEED users have been unanimous in their praise of the System and manual. Typical comments are:

*"... we are more than pleased with MicroSPEED... I can't imagine using BASIC on any future applications."*  
Roger Guevremont, National Research Council of Canada.

*"I continue to marvel at its versatility and power."*  
Carl R. Schramm, USCG Base, Kodiak, Alaska.

*"Great!... A joy to use."*  
Henry Harris, Mission Design Manager  
Jet Propulsion Laboratory

*"If you plan to use a personal computer for any demanding task, then we built MicroSPEED for you."*  
Sam Cottrell, President of Applied Analytics.

MicroSPEED requires the Apple Computer with single disk. MicroSPEED II includes 2 MHz math processor. MicroSPEED II + includes 4 MHz math processor.

```
. display for cost > 15.95
00001  BACKPACK      10  65.00  KARL
00004  FOOD           30  45.27  GROUP
00006  STOVE         25  85.00  KARL
00007  TENT           12  62.33  LISA B.
```

```
. list for cost > 10.95 .AND. weight > 10
00004  FOOD           30  45.27  GROUP
00006  STOVE         25  85.00  KARL
00007  TENT           12  62.33  LISA B.
```

Another trick! Did that last one throw you a curve, or did it make sense? The .AND. is one of the logical operators mentioned earlier. The functioning of logical operators is

**In general, these operators can examine specific fields in your database and then produce a logical (true/false) result. In most cases, the commands are easy to decipher.**

based on the arcane mathematical discipline called Boolean algebra, which is central to many computer languages' ability to manipulate data. If you don't know what Boolean algebra is, don't worry. Just as an aside, though, most of the semiconductor chips in a computer operate according to Boolean rules, and if you are interested in learning more about them, most computer-language and hardware books

discuss the topic in detail. In general, these operators can examine specific fields in your database and then produce a logical (true/false) result. In most cases, the commands are easy to decipher. For instance, the example above simply amounts to "Show me a list of all the records in which the cost is greater than \$10.95 and the weight is greater than ten pounds." Simple enough. Here is a list of the logical operators:

<u>symbol</u>	<u>meaning</u>
.NOT.	Boolean not
.AND.	Boolean and
.OR.	Boolean or
\$	Substring logical operator

As I said, logical operators produce a true-or-false result. So why did we get the listing in the last example, after using the .AND. operator? It's because we used the List For phrase. If we were to eliminate the List For part of the last command, the result would be different:

```
. use camplst
. goto 3
. disp
00003  FLASHLIGHT    5  15.00  CECI
```

```
. ? item = "FLASHLIGHT".AND. weight = 5
.T.
```

When you use the List command along with the rest of the phrase, the listing occurs for all records that would result with a .T. if we were to go through the database manually. Here are some more examples:

Whether you are a new user or experienced and looking to round out your expertise you will be impressed with Personal Tutor™ Training Tapes. Each package includes three detailed instructional tapes that will allow you hands-on-experience at your own pace. Our audio courses don't take control of your computer away from you, but gently guides you to master your system and the most popular software packages on the market. Now you will learn how to use the power of the system you have invested in.

### PERSONAL TUTOR™ INSTRUCTIONAL TAPES

#### WORD PROCESSING:

Apple Writer II®	39.95
Screen Writer II®	39.95
Bank Street Writer®	39.95
Super Text®	39.95
Easy Writer II®	49.95
Letter Perfect®	39.95

#### DATA BASE:

dBase II®	59.95
DB Master®	49.95
PFS®: File/Report	49.95
Easy Filer®	49.95
VisiFile®	49.95
DataPerfect®	49.95

#### SPREAD SHEET:

VisiCalc®	49.95
TK! Solver™	49.95
SuperCalc®	49.95
MultiPlan®	49.95
1-2-3®	49.95
Easy Planner®	49.95

#### COMPUTERS:

Apple® //e	49.95
IBM® PC	49.95
Commodore 64®	49.95
Vic 20®	39.95

# NOW YOUR APPLE® CAN HOOK TO ANY MAINFRAME.

Apple is a registered trademark of Apple Computer, Inc.,  
CP/M is a registered trademark of Digital Research, Inc.,  
Dow Jones News/Retrieval is a registered trademark of  
Dow Jones, Inc. The Source is a service mark of  
Source Telecomputing Corporation,  
CompuServe is a registered  
trademark of CompuServe, Inc.

If you have an Apple II, Apple II Plus, or Apple IIe, we have good news for you. Now there are two inexpensive software programs that can turn your Apple into a much more valuable tool.

### **Softerm 1 connects you with information services.**

Softerm 1 lets you retrieve information from services such as *The Source*,<sup>sm</sup> *Compu-Serve*®, and *Dow Jones News/Retrieval*®. Plus, gives you the ability to access bulletin boards and send or receive electronic mail. Other features include user-defined keyboard macros, built-in phone book for automatic dialing, terminal mode line capture simultaneously to print or disk, copy screen to print or disk, and terminal status display.

### **Softerm 2 connects you with your company's computer.**

This expanded version of Softerm lets you gain access to the information stored in your company's main computer from your home or office. With either version of Softerm, you can download information into your Apple and capture it on your own disk

in any format you choose—DOS, CP/M®, or Pascal. Also included with Softerm is a source program for your host computer to ensure compatibility with Softerm's file transfer capabilities.

### **Makes your Apple work exactly like any major terminal.**

Softerm 2 provides complete emulation of these terminals: ADDS Regent 20, 25, 40, 60; ADDS Viewpoint; Data General D200; Datapoint 3601; DEC VT102, VT52; Hazeltine 1400, 1410, 1500, 1520; Hewlett-Packard 2622A; Honeywell VIP7205; VIP7801, VIP7803; IBM 3101 Model 10 and 20; Lear Siegler ADM-3A, ADM-5 and TeleVideo 910, 925, 950. And the list is growing all the time. We'll send you a User's Guide, handy reference card, and a telephone number to call if you need more assistance.

CIRCLE 163 ON READER SERVICE CARD

### **Softerm can't become obsolete.**

We constantly improve Softerm. And we make those improvements available to you 24 hours a day, 7 days a week. To update your program, just dial our computer and transfer the improvements to your disk.

### **Get Softerm now.**

It's the inexpensive way to turn your Apple into a much more valuable tool for your home or office. Softerm 1 is only \$135; Softerm 2 is \$195. Both are available now from your local dealer or from Softronics, Inc. For more information or to order, call (901) 683-6850.

00007  TENT           12  62.33  LISA B.
```

In order to demonstrate the .NOT. operator, I modified the database to include another field called Going—a logical (L) field.

Then I filled in the fields to indicate which items were going on the camping trip. Using the .NOT. operator, we can see which ones are going and which ones are .NOT. going:

```
. display for .NOT. going
```

```
00003  FLASHLIGHT   5  15.00  CECI    .F.
00004  FOOD          30  45.27  GROUP   .F.
00006  STOVE          25  85.00  KARL    .F.
```

```
. display for going
```

```
00001  BACKPACK    10  65.00  KARL    .T.
00002  CANTEEN     3  12.50  FRED    .T.
00005  RAINGEAR    7  12.95  VALERIE .T.
00007  TENT           12  62.33  LISA B. .T.
```

```
. display for weight <10 .AND. (.NOT. going)
```

```
00003  FLASHLIGHT   5  15.00  CECI    .F.
```

Finally, let's look at the last of the logical operators, the substring search. In case you don't already know, a "string" is a collection of any printable characters, including numbers. A string has no special mathematic or logical value of its own, and so your computer usually doesn't try to make heads or tails of it, it just stores strings away for humans to look at later. Now this operator is called a "substring" search operator because it looks to see if one string is included in another string. For example: is *the* included in *another*? Yes.

Substring searching is a handy tool because it can look through any character field and let you know whether the

## A 'string' is a collection of any printable characters, including numbers.

word you are looking for is anywhere in that field. You could even search through an entire database looking for every occurrence of an important word if you needed to.

The syntax for this operator is as follows:

```
?. <"string">$<field>
```

Try these commands to get the hang of it:

```
. goto 6
. display
00006  STOVE          25  85.00  KARL
```

Set Up Your **DOT MATRIX PRINTER**  
With a Touch of a KEY!

# PCP™

## PRINTER CONTROL PROGRAM

**BURIED** IN STACKS OF ARTICLES?  
CONSIDER HIRING A  
LIBRARIAN FOR ONLY  
**\$75**

Quick Search Librarian (QSL) makes it easy to enter and edit your journal references, search for articles, and print or sort a list of articles using the 48K APPLE® II + computer. Important QSL features include:

- Two keystrokes select any one of 255 keywords or any one of 255 journal titles.
- Four lines available for listing authors, title and/or comments.
- Powerful data base screen editing, copying and merging features.
- Average search speed is 50 articles/second with multiple criteria; average sorting speed is 40 articles/second when sorting on 3 fields.
- Typically, 1000 articles can be stored on a single disk.
- Includes sample data base and tutorial for *Scientific American*, 1981.

VISA or Mastercard orders accepted. QSL manual available separately for \$5. (Price of manual deductible later with purchase of QSL software.) Add \$1.50 for shipments made in U.S.A.

# STOP WAITING WRITE AWAY IS HERE!

---

If you're tired of word processing software  
that takes too long to use  
and doesn't do everything you want it to  
then you need **WRITE AWAY™**

---

The most powerful, highest  
level word processing available  
for the Apple\* — and more.  
With the new, full-function  
**WRITE AWAY** from Midwest  
Software you get . . .

- Flexibility . . .  
*WRITE AWAY works with any printer,*  
80 column cards, and most popular  
applications programs (Visicalc,  
pfs, DB Master, and more)
- Speed . . .  
super fast file loading (load  
a 10-page document in less than  
18 seconds), 8 easy to use *function*  
*keys*—each key can reduce up to  
32 characters to a single keystroke  
to save you time
- Integrated . . .  
you can access on-line data bases,  
bulletin boards, and other sources  
of information . . . *send memos,*  
*letters, telegrams, electronic mail,*  
*TELEX, MCI mail with the touch of*  
*a button*
- Multi-Function . . .  
far beyond standard word  
processing systems, **WRITE AWAY**  
also features mail merge, file  
translator to create standard text  
files, unlimited document size,  
"if . . . then" text selection,  
displays finished copy, and more

- Easy to learn and Use . . .  
screen tutorials, help screen,  
complete loose-leaf instruction  
guide with multiple examples,  
fully indexed and stand-up  
Command Card

#### Money Back Guarantee

If **WRITE AWAY** doesn't save you  
time and do everything you want it  
to within 30 days, you'll receive a  
full refund on your purchase.

#### ORDER NOW—ONLY \$175.00

00007 TENT           12   62.33  LISA B.
```

### Summing It Up

When it comes to numbers, another useful command is Sum. This command is similar to the arithmetic operator +, which we used earlier, except that it adds information from many records into one total (the + function referred only to the current record). For instance, say we wanted to sum the cost of all the items in the Camplist database. It would go something like this:

```
. list
00001 BACKPACK      10  65.00  KARL
00002 CANTEEN        3  12.50  FRED
00003 FLASHLIGHT    5  15.00  CECI
00004 FOOD           30  45.27  GROUP
00005 RAINGEAR       7  12.95  VALERIE
00006 STOVE          25  85.00  KARL
00007 TENT           12  62.33  LISA B.
. sum cost
298.05
```

```
. sum weight
92
```

```
. sum weight, cost
92 298.05
```

```
. sum cost +weight
390.05
```

The first command simply added up the cost column. The second command did the same for the weight column. With the third command, we accomplished both commands at once, using a comma to separate the two field names. Finally, the last command resulted in one large number that is the sum of all the weights and all the costs.

As a more complex example, let's do something a bit more practical. If you still have the inventory database we used last time, try duplicating figure 1.

### Next Time

Next issue will cover some complicated techniques for filewide manipulation, including experimentation with joining two databases together and with the Update command, which helps keep your databases current. So, until your next issue arrives or appears on the newsstand, try to take the time to experiment on your own, and of course, always keep a backup disk of your files in a safe place. +

### Pooyan

This arcade game is now available for the Apple II, II Plus, and IIe home-computer systems. Its features include outstanding high-resolution color graphics and multiple-screen scenarios. One or two persons can play.

The player glides up and down in a gondola defending helpless piglets from vicious, hungry wolves. The wolves float up and down from a forest tree clinging to balloons and throwing deadly acorns at the player's home. Defense strategy includes shooting arrows at the wolves' balloons and throwing chunks of meat to distract the cunning canines. In a second scenario in the wolves' lair, the player must dodge more acorns thrown by balloon-carried wolves ascending to a cliff as they try to push a giant rock down on the players.

Pooyan is available on the Apple disk. (*List Price: \$29.95*)

**Requires:** Apple II, II Plus, or IIe; 48K RAM; one disk drive

The TK!SolverPack for Introductory Science, designed for use with the TK!Solver program, is geared toward

## ► SOFTWARE

### O'Riley's Mine

In O'Riley's Mine, the player guides miner O'Riley on a subterranean search for untold riches of coal, oil, gold, rubies, and diamonds in California's legendary Mother Lode. O'Riley must evade a gushing underground river and its hungry river monsters by carefully planting his dynamite stash to blow debris in their path without being blown to bits himself.

The river water's speed increases at every new play level, and it continues to rise as O'Riley digs deeper to gather treasures. And, as the moon rises, the monsters move faster through the mine shaft, making O'Riley's task increasingly difficult. (*List Price: \$29.95*)

**Requires:** Apple II, II Plus, or IIe

### Knoware

Developed for businesspeople, Knoware teaches the fundamentals of how to use a personal computer easily and effectively and requires no prior experience, manuals, or classes. An optional key-board tutorial is included.

Knoware affords new users hands-on experience with six important business applications: simple graphics, basic programming, database management, spreadsheet applications, text editing, and financial decision making.

With Knoware, users follow a career path from mail clerk to chairman of the board and, in the process, learn and practice computer applications. After each step up the corporate ladder, users get a chance to invest their salary and bonuses in stocks and bonds, thus becoming millionaires while climbing to the top of the corporation with their computer skills.

When users complete the learning experience, they can independently use eight introductory application programs that are part of each Knoware

high-school and college-level chemistry, biology, and physics courses. The program contains models with the necessary equations, values, and tables to solve particular problems in these fields and is designed to be used as a supplement to basic textbooks, lectures, and other teaching methods.

The basic strength of TK!Solver is its "backsolving" capability, which allows users to solve any of the variables in an equation without restating the problem. TK!Solver offers several other unique problem-solving features, including iterative solving, list solving, tables and graphs, and automatic unit conversion. In addition, the program offers 34 built-in functions, as well as the ability for users to create their own functions.

Other TK!SolverPack application packages are available for Mechanical Engineering and Financial Management. TK!SolverPacks currently under development include Building Design and Construction, Electrical Engineering, and Statistics. (*List Price: \$299*)

#### Docuwriter

Docuwriter, a word processor for the Apple II or IIe, offers such easy-to-use features as menu operation, on-screen help menus, and critical decision checking. Although it is extensively documented, the first-time user can normally operate the system using only the simple on-screen help facilities. The system supports uppercase and lowercase display and has a complete array of editing and merging operations. The system includes such features as a mailing-list manager and a form-letter element usually found only on more expensive applications. (*List Price: \$69.95*)

#### CBS Software Programs

Match-Wits is a game of memory, logic, and strategy for one or two players. Players can draw on their knowledge of any of six preprogrammed categories—words, sports, famous people, multiplication, cities, and animals—to match pairs and uncover pieces of a picture puzzle. The program consists of three rounds in each of the categories and has 18 puzzles to identify. You can create new files and new categories or add to those provided on the disk.

Mystery Master: Murder by the Dozen is a logic and deduction game for up to four players playing cooperatively or competitively. Players investigate 12 murders using a dossier on each crime, a map, and a clue book containing hundreds of numbered clues.

Success with Math is a series of four math-review programs, each with varying difficulty levels. The programs identify errors and explain them before you move on. The four programs are Addi-

tion/Subtraction, for elementary students; Multiplication/Division, for elementary students; Linear Equations, for seventh through tenth grade; and Quadratic Equations, for students in eighth through eleventh grades. (*List Price: \$29.95, Match-Wits; \$34.95, Murder by the Dozen; \$24.95 each disk, \$19.95 each cassette, Success with Math*)

## PRODUCT NEWS

modules to target those needs.

Shakespeare and the Dragon is a fantasy game within which students can sharpen their spelling skills. Players pursue a quest to overthrow Ra, a master of evil, who threatens a mythological realm. Players build alliances among creatures they encounter, and, when they seek help, Shakespeare poses spelling questions. Depending on the level of difficulty chosen, Shakespeare confers both information and power to aid in the struggle against Ra. (*List Price: B.E.S.T. modules: \$119.95, Linear Equation: \$169.95, Language of Math, Math Problems Parts I and II, and Operations and Processes: \$34.95, Shakespeare and the Dragon*)

### Bank Street Speller

Bank Street Speller makes it easy to correct spelling errors and typos in everything you write with the Bank Street Writer.

The program automatically proofreads your writing, searching out spelling errors and typos and highlighting them. After it detects an error, Bank Street Speller will suggest a correct spelling, if desired. Or, drawing on Bank Street Speller's electronic dictionary, you can look up spellings, even using "wild card" characters if you are unsure of a word. Bank Street Speller will then automatically insert the correct spelling directly into your Bank Street Writer text files, replacing misspelled words globally, or instance by instance.

Bank Street Speller is also designed to help you become familiar with your vocabulary and patterns of word usage. It will display or print out alphabetical word lists and provide a count of the to-

tal number of words used in a document. It will also let you know the number of unique words that you have used. With two disk drives, you can create your own custom dictionary, adding your own special words.

Bank Street Speller looks like and works like the Bank Street Writer, using the same screen layout, control keys, easy-to-follow menus and prompts. And because it is already Bank Street Writer specific, there are no complicated set-up procedures. (*List Price: \$69.95*)

## NOW... APPLE IMAGEWRITER\* COMPATIBLE! From Screen to Paper at the Touch of a Button

**Textprint** is the ONLY way to get fast, easy printouts of ANY screen, at ANY time, with ANY program - in color and black & white.

Push the red button that comes with PRINT-IT!™ - Your program pauses instantly; touch RETURN and whatever is on your screen - text, graphics or both - is printed in color or black & white.

Whether your Apple II, II+, //e or "look-alike" is for business or pleasure, you'll want the ability to pause and take snapshots of your screen displays and then continue from exactly where you paused, all at the touch of a button - games, business data, menus, educational instructions, graphics - even CP/M\*\* - PRINT-IT!™ will print your screen at any time no matter what program you're running, as well as perform every function you expect of an intelligent printer card.

PRINT-IT!™ supports:

- Graphics - Low, high, double low, and double high resolution
- Text - 40 column as well as Apple //e and Videx\*\*\* 80 column cards
- Printers - All of the most popular printers, including color, are easily selected with a dip switch

PRINT-IT!™ is available at your local computer store now! If they don't have it in stock, ask them to get it for you.

PRINT-IT!™ is also available for \$199 directly from Textprint with an unconditional money-back guarantee. Just return it in good condition within 30 days of purchase, post-paid, for a full refund. Qualified educational and dealer discounts available.

Textprint's Model 2 (with most PRINT-IT!™ functions, except the push button pause/print feature) is the next best printer interface available anywhere, and for only \$149.

# PROGRAMMER'S GUIDE TO CP/M®

Edited by Sol Libes

This authoritative volume of reprints from *Microsystems* magazine is a must for the programmer writing software for CP/M or the individual installing CP/M on non-configured systems. *Programmer's Guide to CP/M* includes sections on: CP/M structure and format • The CP/M connection • Interfacing CP/M to operating systems. File operations. CP/M on North Star systems • CP/M software reviews • CP/M enhancements • CP/M directories • CP/M applications programs • CP/M assemblers • Evaluations of MODCOM, COMMX, MCALL, OSI and other software • Business and accounting programs • Compiler BASIC • Data base systems • Debuggers/Disassembler • Editors, formatters and word processors • Encryption. The *Guide* also offers material on interpreters, languages, utilities, sort programs and much more. CP/M is the most widely used, most commonly implemented operating system in the world. This book provides a focused look at its unique and practical features.

## HARDWARE

### DisCache Disk Subsystem

DisCache is a high-speed, high performance Winchester disk subsystem for personal computers. The new 10- or 20-megabyte (formatted) subsystem includes a 5¼-inch hard disk, fast RAM cache memory (up to 256 kilobytes), a specialized microcomputer, as well as a newly designed incremental backup system.

The DisCache system uses a built-in microcomputer and high-speed cache memory to improve disk-access speed, security backup, and print spooling. The subsystem makes some of the programs and/or data on the Winchester immediately available from RAM rather than from disk, with a maximum ac-

cess time of 100 microseconds.

Networked shared access at 0.5 megabytes exists for up to 21 computers. Connection is simply "daisy chaining," with no external multiplexer required. (List Price: \$3000)

## APPLE II Outperforms IBM PC with MegaTASK PLUS™

**MegaTASK PLUS™** is a combined, multi-product hardware and software package that provides **MEGABYTES** of **VIRTUAL MEMORY**, **MULTITASKING**, and much more to your Apple or Apple compatible computer. MegaTASK PLUS utilizes the SMARTCHIP™ (which uses an Intel 8748 Single-Chip Microcomputer), MegaTASK™ & MegaDOS™ software, and more. Your system will be enormously enhanced, specifically

- **MULTITASKING** (as many as 16 TASK can execute at one time)  
Ex. Several printers can be printing while you do data-entry
- **MEGABYTES of VIRTUAL MEMORY.** Largest program size 8 Megabytes. Largest ISAM file 451 Megabytes
- **Mainframe Basic commands** bring machine-language speeds to interpretive Basic.
- **Increased Speeds.** Program execution and file access up to 10 times faster, and data transfer up to 20 times faster.

On the application side, the 'PLUS' portion includes:

- Business Graphics, Calc, Database Management and Word Processing Applications Packages
- Report Generators and Strategic Business Analysis programs
- Communications programs
- Text Manipulators and Program Editors
- And much much more!

MegaTASK PLUS includes: the SMARTCHIP. Two Manuals of over 400 pages. Three Double-Sided diskettes packed with software, a 60-Day-Trial period, a one-year Warranty, and more.

**MegaTASK PLUS and one-free-year of our Applications Software Package Series are available at a cost of \$495.00.** Contact your Local Dealer or order DIRECT. Add \$4.00 for shipping. Virginia residents add 4% sales tax. We accept VISA and MASTERCARD, Money Order, or Check.

# Finally, a 6502 Assembler that doesn't require a genius to operate.

## LISA v2.6

You don't need an I.Q. of 200 to learn assembly language on your Apple II or AppleIIe. All you need is the best 6502 assembler around: **Lazer's Interactive Symbolic Assembler (LISA v2.6)**. LISA is the easy-to-learn and easy-to-use system that will have even the absolute beginner up and running in a matter of minutes. In addition to LISA's clearly written 240-page manual more tutorial material is available for LISA than any other assembler (including books by D. Fudge, R. Hyde, W. Mauer, and R. Mottola). LISA is the beginner's best choice.

Even if your I.Q. is 200, you'll appreciate LISA's speed, power, and ease of use. At 20,000 lines/minute it's 20 to 30 times faster than ORCA/M or Apple's own Toolkit assembler. That's why people like Bill Budge, Ken Williams, Brian Fitzgerald, Don Fudge, and Steve Wozniak use it every day. LISA is very usable. That's why it's the most often used assembler ever created for the Apple II.

**LISA v2.6** is available for \$79.95 at computer stores everywhere. If your local computer store doesn't have a copy you can order directly from:

**Lazerware, 925 Lorna St., Corona, California 91720. (714) 735-1041**

# LAZERWARE

CIRCLE 147 ON READER SERVICE CARD

# LISP for the Apple II<sup>®</sup> now only \$79.95

**When it comes to Microcomputing,  
P-LISP is best:**

"The combination of its technical fitness for the Apple II and the excellent tutorial documentation makes the P-LISP interpreter the best in its class."

—Max Lebow/Microcomputing September 1982

LISP (for List Processor) is one of the oldest computer languages still in active use. Its applications include artificial intelligence, natural language processing, robotics and educational and psychological programming. LISP's features give the programmer the power to develop software far beyond the limitations of BASIC and PASCAL.

Now, Gnosis, Inc. offers P-LISP, an excellent implementation of LISP written for the Apple II, for only \$79.95 and the P-LISP package which includes P-LISP 3.2; a revised and enlarged 100 page reference manual and Learning LISP, authored by Gnosis. Learning LISP, is designed to teach LISP to novices and includes examples written specifically for P-LISP.

**P-LISP \$79.95**  
**P-LISP package (including tutorial) \$99.95**

# WRITE YOUR OWN APPLE GAMES

Includes 40 exciting pre-programmed games to get you started!

*Write Your Own Apple Games* is your ticket to thousands of hours of solid game fun.

But it's more than just a game book. While you're enjoying more than 40 exciting new programs, you'll be learning—quickly and easily—the most advanced techniques of computer game design.

In *Write Your Own Apple Games*, Stuart Anstis explains each game to you in logical, step-by-step subroutines. You'll see crucial game graphics exactly as they should appear on your screen.

Then you'll learn how to rearrange the basic subroutines to create countless game variations.

If you know BASIC, you're ready to learn state-of-the-art game techniques, including how to create smooth, flicker-free screen movement. Generate flashing "neon-sign" graphics. Keep game scores. Use random numbers in game design. And much more.

*Write Your Own Apple Games* gives you all the skills you need to start designing your own original computer games for fun—and profit!

And because writing your own games gives you greater control of your Apple's numerical and graphic capabilities, you'll be opening the door to fantastic new possibilities for using your computer.

Start having some serious fun with your Apple computer. Send for your copy of *Write Your Own Apple Games* today.

## APPLE DIRECTORY

### KITCHEN PLANNER

Create a 1-14 day Menu and Shopping List in less than 5 min. The only program available which both composes balanced meals and lets you change them! It's also the fastest and easiest to use. Compact, useable printout. To order send \$29.95 + \$1.50 (handling) or call with VISA/MC. All Apple II's. CA add 6 1/2%.

SAV-SOFT PRODUCTS  
P.O. Box 24898  
San Jose, Calif. 95154  
(408) 978-1048

### SOFTWARE/PERSONAL

#### COMPUTER ROAD ATLAS

Enter departing city and destination city. Roadsearch-plus computes and prints the best route with miles, time and fuel. Add up to 50 USA/Canada cities to the original 406. DOS 3.3 unlocked. 15 day money back guarantee. \$74.95, \$34.95 with non-expandable data-based. Add \$1.50 S/H. Check/Visa/MC at our dealer or:

COLUMBIA SOFTWARE  
Box 2235Y  
Columbia, MD 21045  
(301) 997-3100

### HARDWARE/POWER PROTECTION

#### COMPUTER PROTECTION

Spike protection: Com-protect I Spike Protector \$39.95. Com-protect II Spike & RFI Filter \$59.95 w/6 ft. cord. Com-protect III Spike, Failsafe surge protection and RFI filter w/6 ft. cord \$89.95. All units have 6 each 3 wire grounded outlets, 600 amp @ 8x10 usec suppressor. RFI filtering from 96Khz to 41mhz. From:

COM-PROTECT, INC.  
Rt. 4, Box 427X  
Slidell, LA 70458  
(504) 641-1316

### SOFTWARE/UTILITIES

#### XPS—DIAGNOSTIC PROGRAM

Easy to use menu driven diagnostic utility for the Apple II, Apple II+, and Apple IIe computer systems. Checks RAMS, ROMS, disks, keyboard, peripherals, printers, 80-column cards (IIe only), monitor, and more. Comes with back-up disk and manual. Requires 48K and one disk drive. Specify computer, \$49.95.

XPS Inc.  
P.O. Box 140  
Carlisle, PA 17013  
(717) 243-5373

### ESSENTIAL DATA DUPLICATOR

The newest and most powerful duplicator for Apple software. It is easier to use and backs up more of the newer software much more reliably than any other nibble or hardware backup on the market today. \$79.95 plus \$2.00 S/H (US), (\$5.00 Foreign). VISA, Master Card accepted. See our display ad this issue:

UTILICO SOFTWARE  
3377 Solano Ave., Suite 352  
Napa, CA 94558  
(707) 257-2420

### THE DISK LABELLER

A powerful program for automatic printing of diskette labels showing FILES, DOS-sec free & used. Built-in default & escape functions, auto config. for printer slots & drives. Completely MENU driven. Req. no doc. Includes 300 5 inch labels. Req. 64K Apple II, II+, IIe disk dr., printer. Only \$59.95 + \$3 ship. NY res. add sales tax. See our display ad in March.

PRACTICAL SOFTWARE LIMITED  
Dept AC, Box 64  
Pomona, NY 10970  
(914) 425-1158

### SOFTWARE/WORD PROCESSING

#### APPLE II, IIe CP/M QWERTY

THE WORD PROCESSOR for professional typists and non-typist professionals is now available on the Apple II, IIe (CP/M) for the amazingly low price of \$59. PC MAGAZINE (April) says: "Because of its excellent manual and logical integration of printing, file-handling, and editing, this package is a good choice for personal or small office use."

# SPECTRUM

## Professional Software Products

### MATHEMATICS SERIES

The Series Includes These 4 Programs:

**STATISTICAL ANALYSIS I:** This menu driven program performs LINEAR REGRESSION analysis, determines the mean, standard deviation and plots the frequency distribution of user-supplied data sets.

**NUMERICAL ANALYSIS:** HI-RES 2-Dimensional plot of any function. Automatic scaling. At your option, the program will plot the function, plot the INTEGRAL, plot the DERIVATIVE, determine the ROOTS, MAXIMA, MINIMA and INTEGRAL VALUE.

**MATRIX:** A general purpose, menu driven program for determining the INVERSE and DETERMINANT of any matrix, as well as the SOLUTION to any set of SIMULTANEOUS LINEAR EQUATIONS.

**3-D SURFACE PLOTTER:** Explore the ELEGANCE and BEAUTY of MATHEMATICS by creating HI-RES PLOTS of 3-dimensional surfaces from any 3-variable equations. Hidden line or transparent plotting.

For APPLE II (48K) and IBM PC (64K) ..... \$50.00

### BUSINESS SOFTWARE SERIES

Both Programs \$250.00

A user-friendly yet comprehensive double-entry accounting system employing screen-oriented data input forms, extensive error-trapping, data validation and special routines for high speed operation. The series includes these two modules:

**GENERAL LEDGER:** A complete accounting system with these features:

- Up to 500 accounts and 500 transactions per month.
- Interactive on-screen transaction journal.
- Produces these reports:
 

Transactions Journal	Balance Sheet
Account Ledgers	Account Listings
Income Statement	

For APPLE II and IBM PC ..... \$150.00

### ACCOUNTS RECEIVABLE

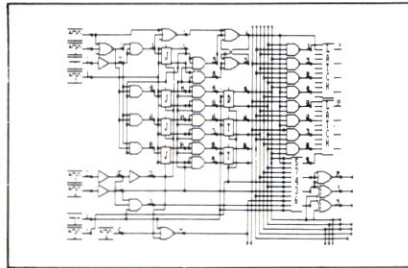

A flexible system with these features

- Up to 500 accounts and up to 500 invoices per diskette.
- Prints invoices, customer statements & address labels.
- Interfaces to General Ledger.
- Interactive screen-based invoice work sheet.
- Produces these reports
  - Aged Receivables
  - Sales Analysis
  - Account Listings
  - Customer Balances

For APPLE II and IBM PC .... (2 DRIVES) .. \$150.00

### MICRO-LOGIC

An interactive graphics program for designing and simulating digital logic systems. Using the built-in graphics module, the user creates a logic diagram consisting of AND, OR, NAND, NOR, EX-OR, D, T, JK, FLIP FLOP and powerful 16 pin user-defined MACRO functions. A typical page of a logic diagram looks like this:

The system provides on-screen editors for NETWORKS/MACROS DATA CHANNELS, CLOCK WAVEFORMS and GATES. GATE attributes include DELAY, TRUTH TABLE, NAME and I/O clocking.

The system is available for Apple II and IBM PC computers. A non-graphics version is available for CP/M 2.2. It uses the network editor to create netlists and text printer plots to display simulation results. All versions require 2- 5 1/4" disk drives.

For APPLE II, IBM PC (192K) and CP/M (70K) \$450.00  
MANUAL & DEMO DISKETTE ..... \$50.00

### PERSONAL FINANCE MASTER

The premier personal and small business financial system. Covering all types of accounts including check registers, savings, money market, loan, credit card and other asset or liability accounts, the system has these features:

- Handles 25 Asset/Liability Accounts
- Monthly Transaction Reports
- Budgets Income & Expense
- Reconciles to Bank Statements
- Prints Checks & Mailing Labels
- Automatic Year-End Rollover
- Prepares a Net Worth Reports
- Searches for Transactions
- Handles Split Transactions
- User-Friendly Data Entry Forms
- Fast Machine Language Routines
- Extensive Error Trapping
- HI-RES Expense/Income Plots

For APPLE II and IBM PC ..... \$75.00

### MICRO-CAP

Microcomputer Circuit Analysis Program

Tired of trial & error circuit design? Analyze and debug your designs before you build them. With MICRO-CAP you simply sketch your circuit diagram on the CRT screen and run an AC, DC or TRANSIENT ANALYSIS. Your circuit may consist of RESISTORS, CAPACITORS, INDUCTORS, DIODES, BATTERIES, BIPOLAR or MOS TRANSISTORS, OPAMPS TRANSFORMERS and SINSUSOIDAL or USER-DEFINED TIME DEPENDENT VOLTAGE SOURCES. MICRO-CAP can analyze any such network containing up to 40 separate nodes. Includes a user controlled MACRO library for modelling complex components such as OPAMPS and Transistors.

For APPLE II and IBM PC computers. A non-graphics version using an on-screen editor to enter networks and text printer plots to display simulation results is available for CP/M (2-2.5 1/4" SSSD) systems. Requires 2 disk drives.

For APPLE II, IBM PC (192K) and CP/M (70K) \$475.00  
MANUAL and DEMO DISKETTE ..... \$50.00

**ORDERING INSTRUCTIONS:** All programs are supplied on disk and run on Apple II (64K) or IBM PC (128K) with a single disk drive unless otherwise noted. Detailed instructions included. Orders are shipped within 5 days. Card users include card number. Add \$2.50 postage and handling with each order. California residents add 6 1/2% sales tax. Foreign orders add \$5.00 postage and handling per product.

# It dials and files. Finds and reminds. Sorts and reports.

## It's Micro Diary. The new way to increase your telephone productivity.

If you use the phone for business or pleasure, we can save you a lot of time. Just connect the telephone Micro Diary to your phone and computer, and you're in business with the smartest system going.

A powerful, electronic telephone directory stores 2,000 names, numbers and addresses. It finds the phone number you need and dials it automatically—including those toilsome, long-distance access codes. And with a special note-filing feature, you can put extra information with each directory listing, including contact names and key information.

The telephone Micro Diary is also strong on follow-up, maintaining your daily calendar of activi-

ties, plus a tickler file to call your attention to important matters.

And there are many more features. A mystery phone number finder to help reconcile monthly phone bills. Sorts by phone numbers or by names. Printing too—your entire directory, calendar, notes, even mailing labels. The telephone Micro Diary is easy to install and use on practically any phone and most popular microcomputers.

See your dealer for details or contact: Wesper Microsystems:
